**Revised Armington Elasticities of Substitution for the USITC Model  
and the  
Concordance for Constructing a Consistent Set for the GTAP Model**

**INTRODUCTION**

This paper presents a set of Armington substitution elasticities, and the concordances between different models and their aggregates, which are required to generate a consistent set of elasticities between the Commission's U.S. computable general equilibrium model ["the USITC model"] and the Commission's Global Trade Analysis Project (GTAP) CGE model ["the GTAP model"]. The underlying CGE models differ in the scope and level of detail. The USITC model is a single country model which includes 497 sectors/commodities.<sup>1</sup> The GTAP model is a global model, which depicts 78 countries/regions and includes 57 commodities.<sup>2</sup> Because of these differences generating consistent elasticity sets for any particular analysis, necessitates defining USITC model aggregate sectors/commodities which will allow mapping to the more aggregate GTAP model commodities. The example illustrates a 128-sector/commodity USITC model and a 41-commodity GTAP model. For the U.S. characterization both are based upon the sectors of U.S. economy as defined in the Bureau of Economic Analysis (BEA) 1992 Input-Output (I-O) accounts.<sup>3</sup> Tables 1 and 2 provide the concordances between the USITC-128 model sectors/commodities and the GTAP-41 model commodities and the BEA I-O accounts. In addition, the Armington elasticity is presented for each of the BEA I-O accounts.

While these two CGE trade models rely upon the same database, the implementation of the

<sup>1</sup>USITC, *Import Restraints: Third Update 2002*, Publication 3519, June 2002; USITC, *The Economic Effects of Significant U.S. Import Restraints: Second Update*, Publication 3201, June 1999. A version of the model was also used in several recent confidential studies of sensitive agricultural imports.

<sup>2</sup>The GTAP framework is fully documented in the following: chapters 2, 3, 4, and 5 in T.W. Hertel (ed.), *Global Trade Analysis: Modeling and Applications*, Cambridge, Cambridge University Press, 1997; Betina V. Dimaranan and Robert A. McDougall (2002), *Global Trade, Assistance, and Production: The GTAP 5 Data Base*, Center for Global Trade Analysis, Purdue University; and at <http://www.gtap.agecon.purdue.edu/>.

<sup>3</sup>The sector classification corresponds to the 6-digit BEA sector classification system used in the 1992 input-output accounts. See U.S. Department of Commerce, Bureau of Economic Analysis, *Benchmark Input-Output Accounts of the United States, 1992*, September 1998.

models differs. More specifically, the USITC model incorporates both the sector and commodity dimensions in the I-O account, but the GTAP model only utilizes the commodity dimension that is most relevant for bilateral trade analyses. Armington substitution elasticities refer to the substitution between a domestic and an imported commodity.<sup>4</sup> Therefore, the first step in linking the USITC model with the GTAP model is accomplished by providing the former model's Armington substitution elasticities to the U.S. component part of the latter model. This accomplishes the objective of making the Armington substitution specifications consistent in both models. Next, the set of proportional price changes derived from simulating a liberalization in the GTAP model is provided to the USITC model. The USITC model utilizes these global (relative) price changes as a part of the U.S. liberalization scenario. The USITC model simulation thereby incorporates the global prices as a consequence of the liberalization with the change in the direct trade distortions imposed by the U.S.

### Armington Elasticities

The results of CGE models are largely determined by the choice of behavioral parameters, known as elasticities, which reflect the sensitivity of consumers and firms to changes in relative prices.<sup>5</sup> However, the values of elasticities are generally not known with precision. Elasticities are preferably generated by statistical or econometric methods based on the historical behavior of prices and quantities and then examined for consistency with economic theory and analysts' intuition about products and industrial processes. For example, the Armington elasticity of substitution between relatively homogenous agricultural or mining products might be thought to be higher than that between bundles of differentiated manufactured goods, and a small trade liberalization is not expected lead to a very large

---

<sup>4</sup> In both models a two tier decision process is assumed. The first tier is the substitution between the domestic and foreign commodity and the second tier is the substitution among foreign suppliers of the commodity. In many global trade models, the Armington elasticity for the second tier decision is equal to twice the value of the elasticity in the first tier. This observational regularity is reported in P. Jomini, J.F. Zeitsch, R. McDougall, A. Welsh, S. Brow, J. Hambley, and J. Kelly, *SALTER: A General Equilibrium Model of the World Economy*, Volume 1. Model Structure, Database and Parameters. (Canberra, Australia: Industry Commission, 1991.) This parameter convention is referred to in the literature as "the rule-of-two." This practice is used in these two models.

<sup>5</sup> An elasticity is defined as the percentage change in a variable Y induced by a one percent change in a variable X, all other things being equal.

change in trade flows. The values of the USITC model substitution elasticities were selected from those found in the economic literature or used in prior Commission analyses. The Armington elasticities in table 1 were then reviewed by USITC industry analysts, and adjustments to some of the elasticities were made to reflect this expertise and then aggregated to the USITC-128 model values that are presented in table 3. Table 4 presents the 41 Armington substitution elasticities required for a GTAP-41 model. These elasticities are derive as the trade-weighted average from the USITC-128 model elasticities presented.
