2006 TAX FORMS NEEDED BY MANY NEW YORK SMALL BUSINESSES AND FARMERS

Federal Forms

1040  U.S. Individual Income Tax Return
     Schedule A & B—Itemized Deductions and Ordinary Dividends
     Schedule C—Profit or Loss from Business
     Schedule D—Capital Gains and Losses
     Schedule E—Supplemental Income and Loss
     Schedule EIC—Earned Income Credit
     Schedule F—Profit or Loss from Farming
     Schedule H—Household Employment Taxes
     Schedule J—Farm Income Averaging
     Schedule R—Credit for the Elderly or the Disabled
     Schedule SE—Self-Employment Tax (short and long schedules)

1040A Nonitemizers, under $100,000 taxable income, other limitations
1040X Amended U.S. Individual Income Tax Return
943 Employer’s Annual Tax Return for Agricultural Employees
1096 Annual Summary and Transmittal of U.S. Information Returns
1099 Information returns to be filed by person who makes certain payments
W-2 Wage and Tax Statement
W-3 Transmittal of Withholding Statements
W-5 Earned Income Credit Advance Payment Certificate
W-9 Request for Taxpayer Identification Number and Certification
1065 U.S. Return of Partnership Income (see rules for Schedule L, M-1, and M-2)
3115 Application for Change in Accounting Method
3800 General Business Credit
4136 Credit for Federal Tax on Fuels
4562 Depreciation and Amortization (including Information on Listed Property)
4684 Casualties and Thefts
4797 Sales of Business Property
4835 Farm Rental Income and Expense (Crop and Livestock Shares (Not Cash) Received by
     Landowner (or Sub-Lessor)) (Income not subject to self-employment tax)
5695 Residential Energy Credits
6251 Alternative Minimum Tax—Individuals
6252 Installment Sale Income
7004 Application for Automatic Extension of Time to File
8582 Passive Activity Loss Limitations
8582 CR Passive Activity Credit Limitations
8606  Nondeductible IRAs
8615  Tax for Children under Age 14 Who Have Investment Income of More Than $1,600
8801  Credit for Prior Year Minimum Tax—Individuals, Estates, and Trusts
8812  Additional Child Tax Credit
8824  Like-Kind Exchanges
8829  Expenses for Business Use of Your Home
8863  Education Credits
8880  Credit for Qualified Retirement Savings Contributions
8888  Direct Deposit of Refund
8903  Domestic Production Activities Deduction
8913  Form not yet available (Business Telephone Excise Tax Refund)

New York State Forms

IT-2 Wage and Tax Statement Summary
IT-150 Resident Income Tax Return (short form)
IT-201 Resident Income Tax Return (for full-year state residents only)
IT-201-ATT Itemized Deduction, and Other Taxes and Tax Credits
IT-201-X Amended Resident Income Tax Return (only acceptable method)
IT-204 Partnership Return
IT-212 Investment Credit
IT-215 Claim for Earned Income Credit
IT-217 Claim for Farmers School Tax Credit
IT-220 Minimum Income Tax
IT-240 Sales and Use Tax for Nonfilers
IT-249 Claim for Long-Term Care Insurance Credit
IT-272 Claim for College Tuition Credit for New York State Residents
IT-398 NYS Depreciation Schedule for I.R.C. §168K Property
IT-399 New York State Depreciation
IT-800 Opt-Out Record for Tax Practitioners
CT-4-S New York S Corporation Franchise Tax Return (short form for small businesses)
CT-47 Claim for Farmers School Tax Credit (for corporations)
NYS-45-MN Quarterly Combined Withholding, Wage Reporting, and Unemployment Insurance Return (manual version) (NYS-45-ATT-MN for attachment)
DTF-623 Claim for Industrial or Manufacturing Business (IMB) Credit
**What's New in Federal Legislation**

**Long-Distance Telephone Excise Tax** refunds will be able to be claimed by individuals and businesses on their 2006 Federal Income Tax returns.

The **Tax Increase Prevention and Reconciliation Act of 2005** (TIPRA) was signed into law on May 17, 2006. This legislation covered a variety of items that will affect most taxpayers:

- Alternative minimum tax relief in the form of extending higher exemption amounts and increasing individual exemption amounts
- Increases the age limit for “kiddie tax” purposes to 18 years of age
- Extends the reduced rates for capital gains and dividends for 2 additional years, through 2010
- Extends for 2 additional years the increased I.R.C. §179 expensing amount
- Eliminates the Roth IRA conversion income limitation beginning in 2010
- Requires a partial payment to the IRS for offers in compromise
- Tax-exempt interest reporting

The **Heroes Earned Retirement Opportunities Act** (HERO) was enacted on May 29, 2006. The act allows members of the armed forces serving in a combat zone to deduct contributions to an IRA even if the only compensation received by the taxpayer is excluded from gross income.

**Public Law 109-264** was enacted on August 3, 2006. This legislation prohibits states from taxing partnership retirement plan distributions for nonresident retired partners.

The **Pension Protection Act of 2006** (PPA) was signed into law on August 17, 2006. This legislation not only affects Pension and IRA Plans but also has many charitable provisions:

- Allows for direct payment of federal tax refunds directly to IRAs
- Repeals the sunset provision of EGTRRA (2001 act) as it applied to the provisions relating to IRAs and Pensions
- Provides an exclusion from gross income for qualified charitable distributions from an IRA
- Disallowance of charitable deduction(s) for clothing and household items unless the item(s) is in “good” used condition or better
- Requires donor of cash contributions to maintain a bank record or written communication from the donee
- Repeals the sunset provision of EGTRRA (2001 act) for qualified tuition programs (I.R.C. §529), so that all provisions of EGTRRA (2001 act) that relate to qualified tuition programs are permanently extended
- Makes the Saver’s Credit under I.R.C. §25B permanent

These are the legislation acts passed in 2005 that will affect the filing of 2006 income tax returns:

- Katrina Emergency Tax Relief Act of 2005—This legislation was enacted to help the victims of the hurricane and those contributing to the victims.
Energy Tax Incentives Act—This legislation is 550 pages of energy policy and incentives to conserve energy and use alternatives measures.

SAFETEA-LU—This act contains the provisions of the safe, accountable, flexible, efficient transportation equity act.

Other legislation includes provisions for tsunami relief, disaster mitigation, bankruptcy abuse prevention, and consumer protection.

In addition to the 2006 legislation there is the 2004 legislation that first becomes effective in 2005 and 2006:

The Working Families Tax Relief Act of 2004—This act established a uniform definition of a qualifying child for several tax benefits and extended many credits and deductions.

The American Jobs Creation Act of 2004—This act made available a general sales tax deduction (for 2004 and 2005) and the domestic production activities deduction.

Some of the benefits of the above legislation for small businesses, farmers, and individuals are as follows:

- The charitable mileage deduction related to Katrina relief is 70% of the standard business mileage rate through December 31, 2006
- Up to a $500 tax credit for costs incurred to improve the energy efficiency of a taxpayer’s main home during calendar years 2006 and 2007
- An individual tax credit of up to $2,000 for the purchase of renewable energy equipment in 2006 or 2007
- The deduction for clean-fuel vehicles ended in 2005 and was replaced by a tax credit for alternative motor vehicles beginning in 2006.
- Up to $2,000 credit for a home builder of new energy-efficient homes in 2006 and 2007
- A tax credit for manufacturers of efficient appliances in 2006 and 2007
- A uniform definition of a qualifying child
- Domestic production activities deduction may provide a benefit for those taxpayers who can meet its provisions.

Situation and Outlook for Dairy

The price roller coaster was aiming downhill at the beginning of 2006 and is aiming at a slight uphill grade as 2006 approaches its end. Market prices are expected by everyone to continue to increase in 2007, but the question is how aggressive the uphill ride will be.

Only a couple of years ago, in 2004, producer prices reached all-time highs, with 4 months of that year producing phenomenal prices for producers. These high prices stimulated production and set the stage for a consequent decline in prices; however, the downside of the price cycle was largely averted in 2005 due to strong demand deriving from a strong economy. The rise in energy costs, among other factors, added an important stimulus to stress both production and consumption in 2006.

Producer milk prices, driven by wholesale prices for leading dairy commodities, will average almost $2.50 per cwt less in 2006 over 2005. Prices averaged over $3 below previous-year levels throughout the spring of 2006.
These low prices created their own considerable stress on milk producers, but this stress is seriously compounded by ongoing high energy prices and stresses on various feed sources. Hay and other forages faced various stresses during the summer growing season around the country, with excessive dryness in much of the West affecting yields and excessive wetness in much of the East impacting harvest and quality. Corn markets have been unsettled by poor conditions in the West, but conditions in the East may or may not be offsetting. High demand for corn used in ethanol is resulting in high corn prices, which further stress dairy farmers. Soybean prices have been weak due to high carryover and adequate production. Thus, the late-2006 price-cost situation for farmers is one of whether milk prices will rise sufficiently to offset overall cost increases deriving from higher feed costs (or poorer homegrown feeds, especially hay) and higher energy costs (including fertilizer for the next growing season).

Market forecasters are all anticipating a rise in milk prices for 2007. Cornell dairy market economist Dr. Mark Stephenson is anticipating a modest strengthening amounting to an average of less than $1 per cwt higher in 2007 over 2006. Factoring into these comparisons, especially for small- to medium-sized farms, will be MILC payments. Monthly payments have reached close to $1 in 2006 and should average around 60¢. This amount will be nearly halved in 2007. Of course, this is because market prices will be better, but the implication is that the improvement in farm price will be felt differently on different-sized farms to the extent the price rise displaces MILC payments.

Planning into 2007 should include even more careful budgeting than usual on both the price and cost sides. Cost factors will vary considerably across the United States, even across the Northeast, but in general producers should be wary of persistent challenges on the cost side. Although milk prices will improve into 2007, demand will likely keep a low ceiling on price rises, resulting from a sluggish economy and high energy costs eroding disposable income.

**Situation and Outlook for Horticulture**

Perhaps the biggest story in the 2005 harvest for fruit and vegetables was the labor situation, with tightened enforcement of immigration law resulting in a shortage of labor for many growers and an increasing number of raids by Immigration Control and Enforcement (ICE) during harvest. Many growers were proactive in filing for H2A labor in July to head off the possibility of labor shortages. However, most did not, and there were instances where labor shortages with small fruit and vegetable crops resulted in economic losses. These events were not numerous enough to affect aggregate fruit and vegetable supply in New York, but the problems were a source of major concern for growers.

Apple production in New York is forecast at 26.2 million bushels based on conditions as of August 1, 2006, according to the official USDA-NASS estimate. This is 6% above the production last year. Nationally production is estimated at 229 million bushels, about an average-sized crop. In the Lake Ontario fruit region, growers in Wayne and Monroe Counties had adequate rainfall, while those in Orleans and Niagara Counties experienced drought through mid-July. In the Hudson Valley fruit region, growers reported good crop development. The crop in the Lake Champlain fruit region was reduced by rainfall during the pollination period. Across the state, growers overall were experiencing above-average fruit conditions. There was abundant rainfall later in the season, and apples are large in size.

Overall for the state, this marketing season has the prospect of being the best in many years for fresh apples, since Washington State (which produces about two-thirds of the fresh apples in the United States) had a shorter crop of fresh apples than normal due to a hailstorm in May. The list prices for processing apples in New York were slightly higher this year, with the state’s largest processor (which processes over a fourth of New York’s total apple crop) offering 3-year contracts with a 1.2% increase each year.

Grape production in 2006 in New York was estimated at 160,000 tons, about 4% above the average of the past 5 years, but 10% below last year’s big crop. Lake Erie growers overall were predicting an average to below-average crop. The Chautauqua area, where juice grape production predominates, encountered frost damage in April that led to lower yields; however, due to the scattered frost effect, some growers were not hit. Growing conditions were good, but disease pressure has been high due to the humid weather. The cash market for juice grape growers recovered to $205 per ton, well above the
$165 (for 16° Brix) grapes last year. However, growers who experienced frost damage will continue to be financially stressed due to the reduced crop.

Growers in the Finger Lakes region received very little winter damage and were reporting a moderate to full crop. Above-average rainfall increased berry size but also increased mildew pressure. Prices in the Finger Lake region for most varieties of grapes were higher this year, despite the shortage of grapes in the previous 2 years from severe winter injury. Strong prices are due to the continuing growth of the Finger Lakes small winery sector, low inventories and pent-up demand from the two previous short crops, and the recovery of the juice grape market.

Long Island grape production is indicated to be average to slightly above average. Growers reported a rainy season with considerable weed and disease pressure. The wine industry in Long Island has been growing rapidly. Industry sources indicate that there are approximately 40 wineries, 60 farms growing grapes, and approximately 3,000 acres of grapes in Suffolk County.

**Tax Suggestions for Farmers**

Here are some tax management suggestions for farmers with 2006 net farm profits:

- Purchase quantities of feed and supplies before the year-end in certain situations. These prepaid expenses may be limited to 50% of other expenses on Form 1040 Schedule F.
- Buy needed machinery now. Take advantage of the I.R.C. §179 deduction as well as rapid depreciation.
- Pay additional wages to family members who actually work on the farm. Consider paying holiday bonuses to regular employees.
- Purchase IRAs or other tax-deferred retirement plans.

---

**FEDERAL TAX PROVISIONS AFFECTING INDIVIDUALS**

**Long-Distance Telephone Excise Tax Refunds**

In general, anyone who paid the long-distance telephone excise tax will get the refund of this tax on their 2006 federal income tax return. This includes individuals, businesses, and nonprofit organizations.

Individuals will be able to receive partial refunds of the long-distance telephone excise tax that has been in existence since 1898. The refunds can be based on an IRS calculation or the actual excise tax paid. The IRS method is based on the number of exemptions claimed on the 2006 federal income tax return filed by the taxpayer(s). The amounts are $30 for one exemption, $40 for two exemptions, $50 for three exemptions, and $60 for four or more exemptions. No special form is needed for individuals to file for this refund; it will be reported on line 71 of Form 1040.

Taxpayers who choose to calculate their refund amount based on the actual amount of tax paid need to review their telephone bills from March 1, 2003, through July 31, 2006. Taxes paid on local-only service are not eligible for the refund. In general, excise taxes paid on other types of services qualify. Federal access charges and state or local taxes and charges are not eligible for the refund.

The IRS is creating Form 1040EZ-T for those individuals who request the refund and do not need to file a regular income tax return.

Businesses, including nonprofits, will need to file Form 8913 and must use the actual amount of long-distance excise tax that was paid from March 1, 2003, through July 31, 2006.
The act (TIPRA) increased and extends the higher AMT exemption amounts that were to expire at the end of 2005. For 2005 the maximum AMT exemption for a return with a married filing jointly or surviving spouse status was $58,000. The (MFJ) maximum AMT exemption amount for 2006 is $62,550. Similar increases are discussed later for other filing statuses. Also, for 2006 all nonrefundable personal credits can be used to offset the regular income tax and the AMT.

The age limit that now applies to the “kiddie tax” has been raised to 18 from 14. The rules otherwise remain the same. The calculation(s) required for 2006 have changed due to the inflationary adjustments.

The 5% and 10% Capital Gain (long-term) and qualified dividend rates were set to expire at the end of 2008. The act extended these rates through 2010.

The $100,000 (as adjusted for inflation) expensing cost of qualifying I.R.C. §179 property placed in service for the tax year was scheduled to revert to the pre-2003 limit of $25,000 at the end of 2007. The act extends the higher limit and inflation adjustment through 2009.

Beginning in 2010 taxpayers will be able to convert traditional IRAs to Roth IRAs without regard to their AGI. Currently a taxpayer can make a conversion only if their AGI does not exceed $100,000. The act also stipulates that conversions occurring in 2010 are to be included in income ratably in the years 2011 and 2012 unless the taxpayer elects otherwise. Any distribution of converted amounts will accelerate the includable amounts.

TIPRA requires that a partial payment, in addition to the user fee, must be given to the IRS by the taxpayer while an offer in compromise is being considered by the IRS. Furthermore, taxpayers must make a down payment of 20% of the offer with the application for lump-sum offers. A lump-sum offer is considered to be a single payment or payments that are five or fewer installments. This provision is effective October 16, 2006 (60 days after enactment).

TIPRA eliminated the information reporting exception for tax-exempt bond interest payments. Payers of tax-exempt interest are now required to report payments exceeding $10 per calendar year. This provision is for interest paid after December 31, 2005.

H.R. 4019 is a special rule that combat zone pay is compensation for the purpose of IRA contributions for the taxpayer as well as for a spousal contribution. This change is retroactive to years after 2003. Contributions must be made within 3 years of May 26, 2006, for 2004 and 2005.

This retroactive law, effective for distributions after 1995, clarifies that for the purpose of IRA contributions for the taxpayer as well as for a spousal contribution. This change is retroactive to years after 2003. Contributions must be made within 3 years of May 26, 2006, for 2004 and 2005.

Also known as H. R. 4019, this retroactive law, effective for distributions after 1995, clarifies that I.R.C. §114(a) as enacted in 1996 applies to partnership retirement plan distributions for nonresident
retired partners, not just to retired employee distributions. Sixteen states have taxed retired partnership plan distributions to retired partners since the 1996 legislation.

Practitioner Note: This law affects New York State and may give rise to an opportunity to amend prior-year returns by those taxpayers who were taxed erroneously.

Pension Protection Act of 2006 (PPA)

The PPA requires the IRS to establish procedures for depositing tax refunds directly into an IRA. The IRA must be established prior to the direct deposit request, and the taxpayer must notify the IRA trustee of the year to which the deposit is to apply.

The following provisions of EGTRRA (2001 act) relating to IRAs and pensions were made permanent:

- The increase in the IRA annual contribution limit amount
- The increase in the 401(k) plan annual contribution limit amount
- Provision for taxpayers over age 50 catch-up contributions
- Pension start-up costs tax credit

A direct IRA distribution to charitable organizations is excluded from the gross income of the owner if the IRA owner has attained the age of 70½. Where the IRA includes after-tax amounts, the distributions are first treated as coming from income. The annual exclusion per taxpayer cannot exceed $100,000. These charitable distributions are considered part of the taxpayer’s MRD.

The PPA authorizes the Treasury to issue regulations regarding the denial of a deduction for any contribution to a qualifying organization of household items or clothing that has minimal monetary value, such as used undergarments and socks. In addition, it disallows a deduction for clothing and household items unless the item(s) is in good used condition or better.

The PPA requires the donor of cash contributions to maintain a bank record or written communication from the donee for tax years beginning after enactment. Note that there is no dollar limit for the contribution amount.

All the provisions of EGTRRA (2001 act) that relate to qualified tuition programs are permanently extended including the following:

- Qualified tuition account withdrawals are exempt from income tax.
- Distributions from qualified tuition accounts not used for higher educational purposes are subject to a 10% additional tax.
- Room and board expenses are qualifying expenses.
- Rollovers from one account to another account are allowable.
- Hope and Lifetime Learning Credit coordination with I.R.C. §529
- First cousins are treated as members of the family for rollover and change-of-beneficiary purposes.

The credit designed to encourage lower-income taxpayers to contribute to IRAs and other retirement plans, referred to as the Saver’s Tax Credit, was extended permanently. The credit was previously set to expire at the end of 2005.
Energy Tax Incentives

A lifetime maximum nonrefundable credit of $500 per taxpayer will be available in 2006 and 2007 for costs incurred to improve the energy efficiency of a taxpayer’s main home.

The credit is 10% of the cost of qualified energy-efficient structural improvements and 30% of the cost of specific heating and cooling equipment. There are specific lower credit limits on some items; for example, the lifetime credit for windows is $200 and for air conditioners is $300.

Also in 2006 and 2007 there will be a personal tax credit of up to $2,000 per system for the purchase of renewable-energy equipment such as photovoltaic property to generate electricity and solar water-heating property using sun energy. These credits are applied separately, and total credits could exceed $4,000 per year.

Motor Vehicle Credits

The clean-fuel vehicle deduction has been replaced with new tax credits for 2006 with various termination dates. The new motor vehicle credits have different rates and criteria. The credits are for qualified fuel cell motor vehicles, advanced lean-burn technology motor vehicles, qualified hybrid motor vehicles, and qualified alternative fuel motor vehicles. This credit is available only to the original purchaser of a new qualifying vehicle or, if leased, only to the leasing company.

Vehicles Qualifying for This Credit:

Model Year 2007
- Chevrolet Silverado 2WD Hybrid Pickup Truck—$250
- Chevrolet Silverado 4WD Hybrid Pickup Truck—$650
- Ford Escape Hybrid 2WD—$2,600
- Ford Escape Hybrid 4WD—$1,950
- GMC Sierra 2WD Hybrid Pickup Truck—$250
- GMC Sierra 4WD Hybrid Pickup Truck—$650
- Lexus GS 450h—$1,550
- Mercury Mariner 4WD Hybrid—$1,950
- Saturn Vue Green Line—$650
- Toyota Camry Hybrid—$2,600
- Toyota Prius—$3,150
- Toyota Highlander Hybrid 2WD and 4WD—$2,600
- Lexus RX 400h 2WD and 4WD—$2,200

Model Year 2006
- Chevrolet Silverado 2WD Hybrid Pickup Truck—$250
- Chevrolet Silverado 4WD Hybrid Pickup Truck—$650
- Ford Escape Hybrid (Front) 2WD—$2,600
- Ford Escape Hybrid 4WD—$1,950
- GMC Sierra 2WD Hybrid Pickup Truck—$250
- GMC Sierra 4WD Hybrid Pickup Truck—$650
Quarterly Sales

The credit is available for only a limited time. Tax preparers will need to inquire as to the actual vehicle purchase date. Taxpayers are allowed to claim the full amount of the allowable credit up to the end of the first calendar quarter after the quarter in which the manufacturer records its sale of the 60,000th hybrid or advance lean-burn technology vehicle. For the second and third calendar quarters after the quarter in which the 60,000th vehicle is sold, taxpayers may claim 50% of the credit. For the fourth and fifth calendar quarters, taxpayers may claim 25% of the credit. No credit is allowed after the fifth quarter.

The Quarterly Report of Qualified Vehicles for the Alternative Motor Vehicle Credit for the quarter ending March 31, 2006, shows that Toyota (which owns Lexus) sold 41,779 qualifying vehicles to retail dealers. The following report indicated that Toyota had exceeded 60,000 in sales of qualifying vehicles. Check the IRS Web site for further updates.

Employer Cash Incentives for Hybrids Are Taxable

Some employers are encouraging their employees to purchase hybrid cars and are offering “rebates” or cash incentives to offset the purchase price of these vehicles. This rebate or cash incentive is compensation that should be included on the employee’s W-2 Form wage and tax statement.

Katrina Relief for Taxpayers

Effective from January 1, 2006, to December 31, 2006, the itemized deduction for charitable mileage related to Katrina relief is 70% of the standard business mileage rate rounded up ($0.445 \times 70\% = $0.32 per mile).

Farm Diesel Fuel Tax Refund

The 2005 Transportation Act eliminated ultimate vendor claims for non-dyed diesel fuel or kerosene sold for farm use after September 30, 2005. If non-dyed diesel fuel or kerosene was used for farming purposes, the refund payments were paid to the ultimate registered vendor making the claim. Under the new legislation, the refunds will be paid to the ultimate purchaser under the rules applicable to nontaxable uses of...
these non-dyed fuels. Ultimate purchasers must keep detailed records of usage, dates, suppliers, and amounts and will file Form 4136 annually or Form 8849 for quarterly claims over $749.

**Standard Deduction**

The standard deduction is indexed for inflation and is adjusted annually, as shown in Figure 1. The 2003 act increased the basic standard deduction amount for married taxpayers filing jointly to twice the basic standard deduction amount for single taxpayers, effective for 2003 until 2010.

*Projected

Each taxpayer who is over age 65 or blind receives the regular standard deduction plus an additional $1,000 deduction if married and filing a joint or separate return. The additional deduction is $1,250 if the taxpayer is single or is the head of the household. The additional deductions are subject to the inflationary adjustment. A taxpayer who is both elderly and blind receives double the additional deduction. The additional deductions for age and blindness cannot be claimed for dependents.

**Personal Exemption**

The 2006 personal exemption allowed on the federal return is $3,300 for the taxpayer, his or her spouse, and his or her dependents. Taxpayers may not claim an exemption for themselves or for any other person who can be claimed as a dependent on someone else’s tax return.

There is a phaseout of the personal exemption for certain high-income individuals. For 2006 the benefit of the personal exemption is phased out for taxpayers with the following specific high levels of adjusted gross income (AGI) (these threshold amounts are adjusted for inflation annually):

- $225,750 if married filing jointly or qualifying widow(er) with a dependent child (exemptions completely lost at $348,250 AGI)
- $188,150 if head of household (exemptions completely lost at $310,650 AGI)
- $150,500 if single (exemptions completely lost at $273,000 AGI)
- $112,875 if married filing separately (exemptions completely lost at $174,125 AGI)

The phaseout in personal exemptions was 2% of the exemption amount for each $2,500 increment (or any fraction thereof) by which AGI exceeds the appropriate threshold amount for 2005 and earlier years. A married taxpayer filing separately will lose 2% of his or her exemption for each $1,250 increment above $112,875. For 2006 and 2007 the phaseout is reduced by one-third and by two-thirds for 2008 and 2009. Full personal exemption is scheduled to be restored after the year 2009. The personal exemption phaseout or reduction is calculated on a nine-line worksheet, the “Deduction for Exemptions Worksheet,” included in the Form 1040 instructions. If AGI exceeds the threshold, complete the worksheet before claiming the personal exemption deduction on line 42 of Form 1040.
Example 1. Mr. and Mrs. Dairy file jointly; they have two children, and their 2006 AGI is $285,850. They claim four personal exemptions and the standard deduction. Their reduction and net exemption are calculated as follows:

- AGI $285,850 – $225,750 threshold = $60,100 excess.
- The $60,100 excess ÷ $2,500 = 24.04, or 25 excess increments.
- Their reduction is 25 × 0.02 (2%) = 0.50 × $13,200 (4 @ $3,300) ÷ 2/3 = $4,400.
- Their net personal exemption is $13,200 – $4,400 = $8,800.

A way to evaluate the cost of the personal exemption phaseout to the taxpayer is to calculate the additional tax liability. In Example 1, Mr. and Mrs. Dairy are in the 33% taxable income bracket, where the $4,400 of phased-out personal exemption will cost $1,452 in additional taxes. In other words, their $60,100 of excess AGI caused an additional tax liability of $1,452 or was effectively taxed at 35.4%.

### Dependents

Taxpayers must report the social security numbers of all dependents. The penalty for failure to report this information is $50. Apply for a social security number by filing Form SS-5 with the Social Security Administration, or file online at www.ssa.gov.

Taxpayers may not claim an exemption for a dependent who has a gross income of $3,300 or more, unless it is for their child under age 19 or a full-time student child under age 24 at the end of the tax year. Nontaxable social security benefits and earnings from sheltered workshops are excluded. A full-time student must be enrolled in and attend a qualified school during some part of each of 5 calendar months. Individuals who can be claimed as dependents on another taxpayer’s return may not claim a personal exemption on their own return.

The qualified child, student, or other qualified dependent’s basic standard deduction allowable is limited to the smaller of the basic standard deduction or the larger of (1) $850 or (2) the individual’s earned income plus $250, as shown in Figure 2. However, the additional deductions for age or blindness are still available in full.

</table>

Investment or unearned income in excess of $1,700 that is received by a dependent child under age 18 is taxed at the parent’s marginal rate if greater than the income tax using the child rates. A three-step procedure is required to compute the tax on Form 8615, Tax for Children Under Age 18 Who Have Investment Income of More Than $1,700, where the excess over $1,700 will be taxed at the parent’s marginal rate, and unearned income greater than $850, but less than $1,700, will be taxed at 10%.

The election to claim the child’s unearned income on the parent’s return with Form 8814, Parent’s Election to Report Child’s Interest and Dividends, is available, and the base amount is $1,700 with an $850 tax exemption. This election cannot be made if the child has income other than interest and dividends, if estimated tax payments were made in the child’s name, or if the child’s income is more than $8,500.
All the tax brackets have been adjusted for inflation this year. Each of the top four tax brackets has been increased from 2005, which results in many taxpayers with constant taxable incomes paying somewhat less for income taxes in 2006. The 10% bracket increased by $250 for single taxpayers and married taxpayers filing separately, and twice that for married taxpayers filing jointly. For example, for a married taxpayer filing jointly, the increase of $500 in the 10% bracket rather than the 15% bracket is a savings of $25 in income tax liability. After 2010, the 10% rate bracket reverts to the levels under the prior act, unless changed. There is not a 10% bracket for estates and trusts. The 15% bracket for those married taxpayers filing jointly is twice the single bracket. The 2006 tax rate schedules are shown in Figure 3.

</table>
The rates for heads of households are more favorable than for filing single. Single taxpayers who are maintaining a home for themselves and a dependent should qualify. A married taxpayer not living in the same household as his or her spouse for the last 6 months of the year is treated as married filing separately but may qualify as head of household if he or she has a qualified dependent.

**Marriage Tax Penalty**

The 15% income tax bracket for married taxpayers filing jointly continues at twice the single income tax bracket. This eliminated the marriage penalty in that income tax bracket only. The 2004 act made this increase permanent until the end of 2010.

Notice that the 2003 act only fixed the 15% bracket and not other brackets. So, actually, the acts have not completely eliminated the marriage tax penalty.

The other part of the marriage tax penalty has to do with the comparison of the standard deduction between singles and married filing jointly. Two singles used to be afforded a larger standard deduction than a married couple filing jointly. The 2003 act changed this deduction so that the deduction for married filing jointly moved to 200% of the single taxpayer amount. Thus, married taxpayers filing jointly will benefit from the $5,150 times 2, or a $10,300 standard deduction in 2006. Inflationary adjustments will continue to be made until the end of the year 2010. Increasing the earned income credit phaseout amounts for joint filers will provide marriage tax penalty relief for EIC calculations. The 2001 act increased both the beginning and ending of the EIC phaseout ranges by $1,000 in 2002, $2,000 in 2005, and $3,000 in 2008. Married individuals must file a joint return in order to claim the EIC. The calculation of the couple’s combined income previously penalized some couples that had a smaller EIC when married compared to unmarried.

**Medical Expenses**

Medical expenses that exceed 7.5% of AGI are itemized deductions. Medical expenses are broadly defined to include payments made for nearly all medical and dental services; therapeutic devices and treatments; home modifications and additions made primarily for medical reasons; travel including auto mileage deductions, which is $0.18 per mile for 2006, and lodging expenses associated with qualified medical care trips; legal fees required to obtain medical services; prescribed medicine and drugs; special schooling and institutional care; qualified health insurance premiums; and the costs to acquire, train, and maintain animals that assist individuals with physical disabilities. Most cosmetic surgery, general health maintenance (such as gym fees and general weight-loss programs), and well-baby care programs will not qualify. However, the cost of weight-loss programs prescribed for the treatment of a disease impacted by obesity does qualify. Remember that itemized medical expenses must be reduced by any reimbursement, including health insurance payments received.

For purposes of the itemized medical expense deduction, the cost of over-the-counter drugs is non-deductible. Rev. Rul. 2003-102 allows over-the-counter drugs to be covered by health-care Flexible Spending Accounts. This ruling allows reimbursements for nonprescription drugs by an employer health plan to be excluded from income if substantiated by the employee.
Long-Term Health Care

Long-term health-care premiums are deductible for 2006 by itemizers when combined with other premiums and medical expenses that exceed 7.5% of AGI. However, there are annual limits on the deductible premiums tied to age. Filers over 70 years old can include long-term health-care premiums of up to $3,530 per year per person, subject to the 7.5% exclusion. Those aged 61 to 70 years old may include $2,830 per person; 51 to 60 years old, $1,060 per person; 41 to 50 years old, $530 per person; and 40 years old and under, $280 per person—all subject to the 7.5% exclusion.

Qualified long-term care (LTC) insurance contracts are generally treated as accident and health insurance contracts. Contract benefits are generally excludable from taxation as money received for personal injury and sickness. The 2006 excludable per diem benefit limit is $250 per day or $91,250 annually. Benefits are reported to taxpayers on 1099-LTC and shown on Form 8853 Section C. This exclusion limit is ignored if the actual cost of the LTC is more than the per diem payment or if the taxpayer has been certified by a physician as terminally ill and death is expected within 24 months of certification.

Disabled Taxpayers

Disabled taxpayers’ business expenses for impairment-related services at their place of employment are itemized deductions not subject to the 7.5% or 2% AGI limits. Disabled taxpayers are individuals who have a physical or mental disability that is a functional limitation to employment.

Itemized Deductions

Itemized deductions not subject to an AGI limit include state income and property taxes, personal casualty losses, and others.

Sales Tax Deduction

The election to deduct state and local general sales taxes instead of state and local income taxes as an itemized deduction on Schedule A (Form 1040) has not been extended at press time.

If extended, taxpayers cannot deduct both. Generally, to figure the state and local general sales tax deduction, one could use either actual expenses or the Optional State Sales Tax Tables. To the table amount, taxpayers could add state and local general sales taxes paid on motor vehicles, aircraft, boats, homes, and home building materials if the rate was the same as the general sales tax rate. Sales taxes paid on items used in a trade or business are not allowed.

Home Mortgage Interest

Home mortgage interest (qualified residence interest) on the taxpayer’s principal and second home is an itemized deduction on Form 1040 Schedule A, provided that the mortgage satisfies the following limitations:

■ Home Acquisition Loan—The mortgage was obtained after October 13, 1987, to buy, build, or improve a main home or a second home, but only if, throughout 2006, the total mortgage debt was $1 million or less ($500,000 or less if married filing separately). Note: This limit applies to the total debt on mortgages obtained after October 13, 1987, plus any prior “grandfathered debt.”

■ Home Equity Loan—The mortgage was obtained after October 13, 1987, other than to buy, build, or improve a home, but only if, throughout 2006, this debt was $100,000 or less ($50,000 or less if married filing separately).
To be deductible, both types of mortgages must be debt secured by a qualifying home and the mortgage must be recorded with the county recorder or otherwise perfected under state law.

Mortgage interest that exceeds these limits is nondeductible. However, an exception applies if the disallowed mortgage interest is deductible under another I.R.C. section.

**Practitioner Note**
There is a tax trap: If a former spouse pays the mortgage interest on an ex-spouse’s home, where only the ex-spouse resides after the divorce, there is no interest deduction.

**Investment Interest Expense**

Investment interest expense is deductible but is limited to the amount of net investment income. Investment interest expense is interest paid on debt incurred to buy investment property. It does not include investments in passive activities or activities in which the taxpayer actively participates, including the rental of real estate. Net investment income is gross investment income (including investment interest, interest received from the IRS, dividends, taxable portions of annuities, and certain royalties) less investment expenses (excluding interest). Gross investment income was redefined by the 1993 act to exclude net capital gain on the disposition of investment property. The 2003 act extended this exclusion to qualified dividends that are eligible for the reduced tax rates. A taxpayer may elect to include net capital gain and qualifying dividends as investment income only if they are excluded from income qualifying for the long-term capital gain tax rate. By electing to treat net capital gain and/or dividend income as investment income to the extent of excess investment expense, any capital gain or dividend income can effectively be transformed into “tax-free” income by offset.

**Example 2.** In 2006 Charlie has $6,000 of investment interest expense but only $5,000 of investment income. Thus, Charlie can deduct only $5,000 of his interest expense and must carry forward the other $1,000 to the next tax year. But, Charlie has $2,200 of qualified dividend income during 2006. Charlie can elect to have $1,000 of that dividend income treated as investment income. By this election Charlie can deduct the full $6,000 of investment interest expense in 2006. The remaining $1,200 ($2,200 − $1,000) of qualified dividend income is subject to the 15% tax rate (5% if in the 10% or 15% brackets).

**Practitioner Note**
If the dividend has been taxed at the lower rate given to dividends and capital gains, then it is not eligible to be used in determining the amount of deductible investment interest.

**Investment Interest Expense Deduction**

Form 4952, Investment Interest Expense Deduction, is designed to calculate the amount of investment interest expense that may be deducted in the current tax year, and the amount one can carry forward to future years. The carryover interest deduction is limited to the excess of the current year’s net investment income over investment interest expense, and no deduction is allowed in any year in which there is a net operating loss.

**Personal Interest**

Personal interest is not deductible.
Charitable Contributions

The standard mileage rate for a passenger car used for charitable causes is $0.14 per mile for 2006 except for mileage related to Katrina relief as previously discussed.

For noncash contributions, the taxpayer must obtain from the charity a receipt that describes the donated property, a good faith estimate of its value, and whether anything was given to the taxpayer in exchange. Taxpayers must use Form 8283 to report total noncash charitable contributions over $500.

In general, the value of clothing and household items is less than the taxpayer’s basis (cost) in such property with the result that taxpayers generally deduct the fair market value of such contributions. You can only deduct the lower of cost or market value.

For example, if you buy a shirt for $20, wear it once, and then donate it to the charity, then the fair market value may be only 50 cents, so that is the amount of your contribution. You must maintain reliable written records, and the donor must generally maintain a receipt from the donor organization.

a. Limitation of Deduction of Household Items and Clothing

Effective on August 18, 2006, and thereafter, no deduction is allowed for a charitable contribution of clothing or household items unless the clothing and item is in good used condition or better. The IRS is expected to issue guidance about what is “good condition.” The new law cracks down on donations of broken household items and poor or soiled clothing. IRS is authorized to deny by regulation a deduction for any contribution that has minimal monetary value, “such as used socks and used undergarments.” In 2003 the IRS reported more than $9 billion claimed as deductions for clothing and household items.

Under the provision a deduction may be allowed for a charitable contribution of an item of clothing or a household item NOT in good condition or better if the amount claimed for the item is more than $500 and the taxpayer includes a qualified appraisal with their return.

b. Modification of Recordkeeping Requirements of Cash Donations to Charities

Effective for the first tax year after August 17, 2006 (for most people that means the 2007 tax return), charitable contributions will require more record keeping regardless of amount. Current law required only a contemporaneous record of contributions of money in a log or ledger book. The new provision requires a record of the contribution by a bank record or a written communication from the donee showing the name of the donee organization, the date of the contribution, and the amount of the contribution.

Planning for 2007 will require those who want a charitable deduction for a cash contribution to a charity offering plate, a Sunday school plate, a Salvation Army kettle, the United Way, and so forth, to use either a check or an envelope identifying the donor. The other alternative is to have the bell ringer or donor representative immediately write out a receipt (indicating donor, donee, date, amount) before you drop your cash into the kettle or other donation collection box.

In a nutshell, no bank record or no receipt means no deduction. Logbooks will not suffice.

c. Substantiation Requirements

In addition to previous record-keeping requirements, substantiation requirements apply in the case of charitable contributions with a value of $250 or more. No deduction is allowed for any contribution of $250 unless the taxpayer has a contemporaneous written acknowledgment of the contribution by the donee organization. In general, if the total deduction claimed is more than $500 for noncash property, the taxpayer must complete Form 8283 (Noncash Charitable Contribution).
II. Special Tax-Free Treatment of Donated IRA Proceeds

The new law allows individuals 70½ or older to make a tax-free distribution of IRA proceeds up to $100,000 per individual per taxable year to a charitable organization during 2006 and 2007. A qualified charitable distribution must be made directly by the IRA trustee to the charitable organization.

Rules for Certain Car Donations Made after December 31, 2004

If you donate a car to charity after December 31, 2004, and you are eligible to take a tax deduction in excess of $500, your deduction is determined in one of two ways:

1. If the car is sold without any significant intervening use or material improvement by the charity, your deduction is limited to the amount of gross proceeds from its sale.
2. If the charity intends to make significant intervening use of or materially improve the car, you generally can deduct its fair market value.

You must get a contemporaneous written acknowledgment from the charity and attach it to your income tax return, Form 1040. If you do not have an acknowledgment, you cannot deduct your contribution. You must obtain the acknowledgment no later than 30 days after the date the charity sells the car, or 30 days from the date of the contribution if the charity intends to make significant intervening use of or materially improve the car.

Form 1098-C, Contributions of Motor Vehicles, Boats, and Airplanes, should be used by donor organizations to report the contributions of qualified vehicles to the IRS and may be used to provide the donor with written acknowledgment of the contribution.

Moving Expenses

Moving expenses are defined as the reasonable costs of (1) moving household goods and personal effects from the former residence to the new residence and (2) travel, including lodging during the period of travel, from the former residence to the new place of residence. The 2006 standard mileage rate for a passenger car used for moving is $0.18 per mile. Meal expenses are no longer included in moving expenses. The new place of work must be at least 50 miles farther from the taxpayer’s former residence than was the old place of work. The deduction will be subtracted from gross income in arriving at AGI.

The following expenses, previously allowed as moving expenses, no longer qualify: selling and buying expenses on the old and new residences; meals while traveling or living in temporary quarters near the new place of work; cost of pre-move house hunting; and temporary living expenses for up to 30 days at the new job location.

Report qualified moving expenses on Form 3903 and deduct them on line 26 of Form 1040. Qualified moving expenses reimbursed by an employer are excludable from gross income to the extent that they meet the requirements of qualified moving-expense reimbursement.

Deductions Subject to the 2% AGI Limit

Miscellaneous Deductions

The following deductions are subject to the 2% AGI limit:

- Unreimbursed employee business expenses subject to the 2% AGI limit include employment-related educational expenses; expenses for travel, meals, and entertainment (subject to 50% rule); and expenses for lodging, work clothes, dues, fees, and small tools and supplies.
Employee business expenses reimbursed under a nonaccountable plan are subject to the 2% AGI limit.

Investment expenses subject to the 2% AGI limit include legal, accounting, and tax counsel fees (not deducted elsewhere in the tax return); clerical help and office rental; and custodial fees.

Job-hunting expenses may be deductible if one is looking for employment. Job hunters’ expenses are deductible if the expenses are incurred in looking for a new job in one’s present occupation. The job-searching expenses are not deductible if one is looking for a job in a new occupation or looking for a first job. Factors to determine whether the employment is in the same occupation include job classification, job responsibility, and nature of employment. The following are expenses that may be deductible:

- Cost of typing, printing, and mailing resumes
- Long-distance phone calls and mailing
- Career counseling and agency fees
- Travel or transportation expenses

Other deductions include professional dues, books, journals, safe-deposit box rental, hobby expenses not exceeding hobby income, office-in-the-home expenses, and indirect miscellaneous deductions passed through grants or trusts, partnerships, and S corporations.

**Meal Expenses**

Meal expenses must be directly related to the active conduct of the taxpayer’s trade or business (i.e., an organized business meeting or a meal at which business is discussed). A meal taken immediately preceding or following a business meeting will qualify if it is associated with the active conduct of the taxpayer’s trade or business. The deductible portion of meal and entertainment expenses paid in connection with a trade or business is 50%. Self-employed individuals claim this deduction on either Form 1040 Schedule C or F, whereas employees deduct 50% of any unreimbursed business meals on Form 1040 Schedule A. The deductible percentage of the cost of meals consumed by employees subject to the Department of Transportation (DOT) increased from 75% for 2006 and 2007 to 80% in 2008 and after. DOT employees include Federal Aviation Administration (FAA) employees (pilots, crews, etc.), railroad employees, and interstate truck and bus drivers under DOT regulations.

**Itemized Deductions (Overall Limitation)**

A taxpayer should itemize if total itemized deductions are greater than his or her standard deduction. The election to itemize can be made or revoked on a timely filed, amended return. The limitation for high-income taxpayers must be considered when comparing itemized deductions with the standard deduction.

The itemized deduction 3%/80% reduction rule for married filing separately in 2006 begins at $75,250 (AGI), and the limit for all other taxpayers starts at $150,500 (AGI).

Taxpayers with a 2006 AGI in excess of the limits previously mentioned must reduce all itemized deductions except medical expenses, investment interest, casualty losses, and wagering losses to the extent of wagering gains. Starting in 2006 the reduction equals 2/3 of the lesser of 3% of excess AGI or 80% of the applicable itemized deductions. This net 2% of excess AGI will be the most common reduction and will not be a major additional tax burden unless AGI is very high and the taxpayer has significant applicable itemized deductions. The 7.5% of AGI medical expense adjustment and 2% floor on miscellaneous itemized deductions must be applied before the high-income deduction.
Example 3. Fred and Ann Veryrich’s 2006 AGI is $170,500. Their itemized deductions total $17,000, including $12,000 of deductible medical expenses (after the 7.5% AGI deduction) and investment interest. They claim no casualty or wagering losses. They must reduce their itemized deductions as follows:

- $170,500 AGI $150,500 maximum = $20,000 excess; $20,000 excess × 0.03 = $600.
- $600 is less than $4,000 (0.80 × $5,000 of applicable itemized deductions).
- $600 × 2/3 = $400
- They reduce itemized deductions by $400; $17,000 – $400 = $16,600 adjusted itemized deductions.

Starting in 2008 the otherwise applicable phaseout is reduced by two-thirds and completely eliminated after 2009.

Planning Pointer In 2010 there is no phaseout of itemized deductions. This is another tax-planning management area for those who are subject to deduction phaseouts. If they can delay their itemized deductions from 2007 to 2008 and from 2009 to 2010, they will pay less tax.

Interest and Ordinary Dividends (Form 1040 Schedule B)

Most taxpayers do not have to file a separate Schedule B (Form 1040) if they have interest or ordinary dividend income of $1,500 or less. Form 1040 filers with over $1,500 are required to use Schedule B to list the names and amounts of those who paid them; Form 1040A filers use Schedule 1. In addition to having one less form to file (for many), this enables many taxpayers to use the shorter Form 1040EZ (TeleFile filing by telephone is no longer an option). The $1,500 threshold replaced the old reporting threshold of $400. This does not affect filers with foreign bank accounts, because they must continue to report any foreign interest or dividends on Form 1040 Schedule B and may need to file Form T.D. F 90-22.1, Report of Foreign Bank and Financial Accounts. Note that failing to file Form T.D. F 90-22.1 may be subject to a penalty.

Qualified Dividend Income

Noncorporate taxpayers who have qualified dividend income will be taxed at reduced adjusted capital gains rates of 5% or 15%, rather than at ordinary income rates of 10% to 35%. Under the 2003 act, qualified dividends received from domestic and qualified foreign corporations generally will be taxed at the same rates that apply to capital gains. Qualified dividends under this provision and as extended will be taxed at rates of 5% (zero in 2010) and 15%. The act increases the amount of net capital gain (determined separately) by the amount of the taxpayer’s eligible qualified dividend income. The act does not change the definition of net capital gain. Qualified dividend income is taxed at the same rates as net capital gain. This applies for purposes of both regular tax and the alternative minimum tax.

Requirements for qualified dividends for tax years beginning after December 31, 2002, are as follows:

- The definition of a dividend is a distribution of property, including money, by a corporation to its shareholders where it is paid out of current or accumulated profits and earnings.
Payments that are called dividends that do not meet the preceding definition are not eligible for qualified dividend income treatment—for example, dividends paid by cooperatives to their patrons, dividends paid to policyholders by their insurance companies, and distributions from money market funds (even though they are called dividends). Regulated investment companies (RICs; that is, most mutual funds) can generally distribute qualified dividend income only to the extent that the RIC received qualifying dividend income. RICs will notify shareholders of the amount of any qualified dividend income distributed.

Any dividend received from a real estate investment trust (REIT) is subject to limitations of I.R.C. §§854 and 857. The 2003 act provides pass-through of qualified dividend income for RICs and REITs for any taxable year that the aggregate qualifying dividends received by the company or trust are less than 95% of its gross income, and may not exceed the amount of the aggregate qualifying dividends received by the company or trust.

The act provides that the reduced rates do not apply to dividends received from any organization that is exempt under I.R.C. §501 or was a tax-exempt farmers’ cooperative in either the taxable year of the distribution or in the preceding year.

Dividends received from a mutual savings bank that received a deduction under I.R.C. §591 or deductible dividends paid on employer securities are not qualified dividends.

Dividends must be received by individual taxpayers (noncorporate).

A shareholder must hold the dividend-paying stock for at least 61 days during a 121-day period (a technical correction from 120 days) beginning 60 days before the stock trades without its dividend (the ex-dividend date) and including the 60 days after the ex-dividend date [I.R.C. §246(c)]. The holding period changed so that, under the new law, a stock bought on the last day before the ex-dividend date could still meet the holding period test because there are 61 days left in the 121-day period. Likewise, a stock sold on the ex-dividend date could meet the test because that is the 61st day in the period.

A similar, but longer, holding period exists for preferred stock dividends attributable to a period exceeding 366 days. This holding period is at least 91 days during a 181-day period beginning 90 days before the ex-dividend date.

Mutual funds, regulated investment companies, and real estate investment trusts that pass through dividend income to a shareholder must meet the holding period test in order to report qualified dividends on Form 1099-DIV.

Taxpayers cannot offset or reduce qualified dividend income by other types of capital losses. Capital gains and losses are calculated separately from qualified dividend income.

Individuals will have to add qualified dividend income to net capital gain in computing their tax on Form 1040 line 44 from the Dividend and Capital Gain Tax Worksheet.

Qualified dividend income will be reported on 1099-DIV and totaled on Form 1040 line 9b.

Any dividend on a share of stock, to the extent that the taxpayer is under an obligation to make related payments with respect to positions in similar or related property, is not qualified dividend income.

Payments in lieu of dividends are not qualified dividend income.

Dividends paid in tax years beginning after 2010 do not qualify, as the Code reverts to previous provisions.

Dividends declared and made payable by mutual funds in October, November, or December are considered received by shareholders on December 31 of the same year, even if actually paid during January of the following year.
Electronic Information Returns

Forms such as 1098, 1099, and 5498 can be furnished to the taxpayer electronically if the recipient consents. Electronic furnishing of Form W-2 was previously authorized.

Foster Care Payments

Foster care payments made by qualified tax-exempt agencies and government agencies can qualify for exclusion from income under I.R.C. §131. The definition of a qualified individual was previously expanded and may include individuals over age 18.

Uniform Method for Determining a Child’s Age

The IRS has had several rules for determining a child’s age for many of the income tax credits. Rev. Rul. 2003-72 clarified and made a more uniform determination of the age threshold for various sections of the tax code. A child born on January 1, 1989, is 17 on January 1, 2006. This same child on December 31, 2005, is considered 16 years old. This rule holds for dependent-care credit, child tax credit, EIC, dependent-care assistance programs, foster care payments, adoption credit, adoption assistance programs, and dependency exemptions.

The same uniform method does not apply to senior citizens. They attain an age on the day before their birthday for most income tax benefits. A person who was born on January 1, 1942, is considered to be 65 on December 31, 2006, and may claim the additional deduction in addition to the standard deduction. It looks like age has its benefits.

Title II of the 2004 act reduces the complexity by reconciling the five definitions of a child in the tax code into a single definition for a “qualifying child” discussed later.

Earned Income Credit (EIC)

Basic EIC rates have been gradually increasing, and some low-income workers without qualifying children are eligible for EIC. Earned income includes wages, salaries, tips, and net self-employment earnings but does not include interest, dividends, alimony, and social security benefits.

Taxpayers in 2006 will use AGI to determine if they qualify for EIC subject to disqualified income, number of children, and phaseouts.

Use Figure 4 to see whether the taxpayer’s earned income and number of qualified children meet the requirement for the credit, and refer to the IRS tables for the 2006 credit amount.
It is possible for a low-income taxpayer to be eligible for EIC even though that taxpayer does not have a qualifying child. To be eligible, such a taxpayer must be age 25 or older, but under 65 years of age. A married taxpayer that does not meet the minimum age requirement may be eligible if his or her spouse meets the minimum age requirement. Other eligibility rules for the low-income taxpayer are the following: he or she cannot be claimed as a dependent or a “qualified child” on another person’s tax return; his or her principal residence must be in the United States for more than one-half of the tax year; the return must cover a 12-month period; the taxpayer cannot file a separate return if married; and the taxpayer cannot file Form 2555 or Form 2555-EZ. The credit percentage is much smaller (7.65%) for taxpayers with no qualifying children, and the credit is phased out over a lower income range.

To be eligible for EIC, any taxpayer must have all of the following:

- Earned income
- Earned income and AGI, each below the maximum earned income allowed
- A return that covers 12 months (unless a short-year return is filed because of death)
- A joint return if married (usually)
- Included income earned in foreign countries and not deducted or excluded as foreign housing amount
- Not be used as a qualifying child who is making another person eligible for the EIC

The 1996 act expanded disqualified income to include (among other income items) capital gain net income. To disqualify more taxpayers, the law said gains from the sale of passive investments should be included as disqualified income. The IRS originally said this included gain from the sale of assets used in a trade or business. This interpretation included assets that met the holding-period requirements of I.R.C. §1231; these assets are not subject to the recapture rules of I.R.C. §§1245, 1250, 1252, and so on. In Rev. Rul. 98-56 (November 1998), the IRS announced that they were reversing their position retroactively as follows:
Section 32 of the Internal Revenue Code allows an EIC to eligible individuals whose income does not exceed certain limits. I.R.C. §32(i) denies the earned income credit to an otherwise eligible individual if the individual's “disqualified income” exceeds a specified level for the taxable year for which the credit is claimed. Disqualified income is income specified in §32(i)(2). Gain that is treated as long-term capital gain under I.R.C. §1231(a)(1) is not disqualified income for purposes of I.R.C. §32(i).

Therefore, gain from the sale of equipment and livestock (sows, boars, beef cattle, horses, or cull dairy cows) that are I.R.C. §1231 property is not disqualified income.

In 2006 the EIC is denied to all taxpayers with an excess of $2,800 of taxable and nontaxable interest income, dividends, net capital gains (excluding those from I.R.C. §1231 assets), and net income from rents and royalties not derived in the ordinary course of business. All gains from the sale of business assets, including ordinary gains (Form 4797, Part II) and gains recaptured as ordinary income (Form 4797, Part III), are not included in disqualified income.

**Uniform Definition of a Qualifying Child**

Beginning in 2005, one definition of a qualifying child is applied for each of the following tax benefits:

- Dependency exemption
- Head of household filing status
- Earned income credit (EIC)
- Child tax credit
- Credit for child- and dependent-care expenses

**Tests to Meet**

In general, all four of the following tests must be met to claim someone as a qualifying child. Also, there is a citizenship test that must be met.

1. **Relationship test**
   The child must be your child (including an adopted child, stepchild, or eligible foster child), brother, sister, stepbrother, stepsister, or a descendant of one of these relatives.

   An adopted child includes a child lawfully placed with you for legal adoption even if the adoption is not final.

   An eligible foster child is any child who is placed with you by an authorized placement agency or by judgment, decree, or other order of any court of competent jurisdiction.

2. **Residency test**
   A child must live with you for more than half of the year. Temporary absences for special circumstances, such as for school, vacation, medical care, military service, or detention in a juvenile facility, count as time lived at home. A child who was born or died during the year is considered to have lived with you for the entire year if your home was the child’s home for the entire time he or she was alive during the year. Also, exceptions apply, in certain cases, for children of divorced or separated parents and parents of kidnapped children.

3. **Age test**
   A child must be under a certain age (depending on the tax benefit) to be your qualifying child.
4. Support test
The child cannot have provided over one-half of his or her support during the year.

Dependency Exemption, Head-of-Household Filing Status, and EIC
For purposes of these tax benefits, a child must be under the age of 19 at the end of the year, or under age 24 at the end of 2006 if a student, or any age if permanently and totally disabled.

A student is any child who, during any 5 months of the year:

- Was enrolled as a full-time student at a school, or
- Took a full-time, on-farm training course given by a school or a state, county, or local government agency.

A school includes a technical, trade, or mechanical school. It does not include an on-the-job training course, correspondence school, or night school.

Individuals with qualifying children will not be allowed EIC if they fail to identify those children by name, age, and TIN on their returns.

The following are previous changes to the EIC:

- The EIC phaseout ranges (both beginning and ending) for married joint filers increased by $2,000 starting in 2005, and an additional $1,000 increase is planned for 2008.
- In cases where a child may be claimed by two taxpayers, the tiebreaker rule was changed in 2002. Rather than the taxpayer with the highest modified AGI claiming the child, the claim will go to (1) the child’s parent, or (2) if (1) does not apply, then the taxpayer with the highest AGI.
- The definition of earned income for purposes of calculating the credit will include only compensation included in gross income and net self-employment (SE) income. Previously, it included compensation excluded from income.
- In 2006, Earned Income Tax Credit will not be reduced by AMT.
- The residency requirement for a foster child is that the child “has to live with the taxpayer for more than 6 months rather than for the entire year.”
- The 2004 act provided the additional benefit of EIC to military families by expanding the definition of earned income to include combat pay. This provision is only for 2004 and 2005.

EIC Reminders for Farmers
If earned income is negative, there is no earned income credit. Therefore, a farmer with a negative Form 1040 Schedule F net farm profit would not get a credit unless there were wages and/or Form 1040 Schedule C income more than enough to offset the loss on Form 1040 Schedule F, or the optional method of reporting SE income is used. A farmer with a negative net farm profit may use the optional method of reporting up to $1,600 of SE income to collect an EIC that would partially or wholly cover
the SE tax and also provide one-quarter of social security coverage, providing disqualified income (such as interest and dividends), earned income, and AGI are all less than the maximum allowed.

If AGI is greater than the maximum allowed, there would be no credit even if earned income is below the maximum. Many dairy farmers could have a Form 1040 Schedule F profit in the EIC range but not get a credit (or at least it is limited) because of gains from cattle sales shown on Form 4797 (or any other source of income that is not classified as “earned”), which would be included in AGI.

Before attempting to manage the net farm profit or SE income to result in an EIC with which to pay the SE tax and provide social security coverage, a farmer needs to understand the EIC rules and the interactions between EIC, SE tax, and income tax.

The Earned Income Credit Advance Payment Certificate (Form W-5) may be used by any employee eligible for EIC to elect advanced payments from his or her employer. The EIC payments made by an employer to his or her employee offset the employer’s liability for federal payroll taxes. Use the IRS tables to determine advanced payments of EIC. Advanced payments are limited to 60% of the credit amount for one qualifying child. The maximum that a taxpayer can receive throughout the year with his or her pay is $1,648, regardless of the total number of children a taxpayer may have. A taxpayer may be able to claim a larger credit but must file his or her 2006 tax return to claim more. An employer’s failure to make required advanced EIC payments is subject to the same penalties as failure to pay FICA taxes. Employers of farm workers do not have to make advance EIC payments to farm workers paid on a daily basis (IRS Pub. 225, Farmer’s Tax Guide).

The child tax credit allows taxpayers to claim a credit for each qualifying child under 17 years of age at the end of the year. Generally, a qualifying child is one whom the taxpayer claimed as a dependent and is a son, daughter, adopted child, grandchild, stepchild, eligible foster child, or your sibling, stepsibling, or their descendant as a U.S. citizen or resident alien. For the taxable year 2006 until the end of 2010 (2004 act extender), the tax credit is $1,000. For taxpayers with AGI in excess of the applicable threshold amount, the credit is phased out. The phaseout rate is $50 for each $1,000 of modified AGI (AGI plus certain foreign source income), or fraction thereof, in excess of the following thresholds: $75,000 for single individuals or heads of households, $110,000 for married individuals filing jointly, and $55,000 for married individuals filing separate returns. See Figure 5 for an example of various filers with one child.

In addition, the Child Tax Credit is limited by the amount of the income tax you owe as well as any alternative minimum tax you owe. For example, if the amount of the credit you can claim is $1,000, but the amount of your income tax is $500, the credit ordinarily will be limited to $500.

For 2006, the total amount of the Child Tax Credit and any additional child tax credit cannot exceed the maximum of $1,000 for each qualifying child.
Individuals entitled to receive the Child Tax Credit and additional child tax credit may also be eligible to receive the Child- and Dependent-Care Credit and the Earned Income Tax Credit. You may claim the Child Tax Credit on Form 1040 or 1040A.

**Child- and Dependent-Care Credits**

If a taxpayer paid someone to care for a child or a dependent so he or she could work, he or she may be able to reduce income tax by claiming the credit for his or her child- and dependent-care expenses on his or her federal income tax return. This credit is available to people who, in order to work or to look for work, have to pay for child-care services for dependents under age 13. The credit is also available if they paid for care of a spouse or a dependent of any age who is physically or mentally incapable of self-care.

The initial rate of credit is 35% of qualified expenses. The rate is decreased by 1% for each $2,000 (or fraction thereof) of AGI over $15,000, but the percentage never goes below 20%. The credit rate is reduced to 20% for eligible taxpayers with AGIs over $43,000. The maximum credit for individuals with AGIs under $15,001 is $1,050 for one qualifying individual, and $2,100 for two qualifying individuals.

For 2006, taxpayers may use up to $3,000 of the expenses paid in 2006 for one qualifying individual, or $6,000 for two or more qualifying individuals. These dollar limits are reduced by the amount of any dependent-care benefits provided by an employer that was excluded from income.

To claim the credit for child- and dependent-care expenses, a taxpayer must meet the following conditions:

- Must have earned income from wages, salaries, or other taxable compensation, or net earnings from self-employment. If married, both must have earned income, unless one spouse was either a full-time student or was physically or mentally incapable of self-care. If the taxpayer chose to include nontaxable combat pay in earned income when figuring the Earned Income Tax Credit for 2006, also include it in earned income when figuring the amount of dependent-care benefits to exclude or deduct from income.

- Payments for care expenses cannot be paid to someone claimed as your dependent on the return or to a child who is under age 19.

- The filing status for this credit must be single, head of household, qualifying widow(er) with a dependent child, or married filing jointly.

- The care must have been provided for one or more qualifying persons identified on Form 2441 to claim the credit.

- You (and, if you’re married, your spouse) must maintain a home that you live in with the qualifying child or dependent.

**Adoption Tax Benefits**

A $10,960 credit per child (including special-needs children) is allowed for qualified adoption expenses paid or incurred by a taxpayer. This credit is phased out ratably for taxpayers with modified AGI (MAGI) between $164,410 and $204,410. Eligible children are under 18 or are incapable of caring for themselves. There are several special rules on the timing of the credit in I.R.C. §§23 and 137. For special-needs children, the credit is allowed only for the year in which the adoption becomes final. The adoption credit is allowed against regular tax and AMT, less other nonrefundable credits and foreign tax credits. To take this credit or exclusion, complete Form 8839.
In addition to the adoption credit, employer-paid or employer-reimbursed funds under an adoption assistance program are excludable. An employee may be eligible for both the credit and exclusion, provided they are not for the same expenses. The exclusion from gross income of employer adoption assistance cannot happen until the year in which a special-needs adoption becomes final.

**Education Incentive Opportunities**

Figure 6 presents the benefits, restrictions, and limitations on several tax incentives for participants in higher education.

</table>
### Coverdell ESA

| Tax incentives | Up to $2,000 of nondeductible contributions (from all contributors) per beneficiary as a trust account or custodial account for qualified higher education expenses for the withdrawal year of a designated beneficiary. Liberalized expense items including elementary, secondary, special-needs, and technology purchases. Caution: Any balance remaining after the beneficiary reaches 30 or dies is deemed distributed within 30 days. The age 30 distribution rule does not apply to special-needs beneficiaries. |
| Restrictions | - 10% penalty plus tax on unqualified withdrawals  
- Cash contributions only  
- No contributions after account holder attains age 18  |
| MAGI limits | Phaseout range starts at $95,000 and ends at $110,000 for singles; the range is $190,000 to $220,000 for joint returns; and the credit is not available to married taxpayers filing separately. Only individuals have phaseouts; corporations and other entities may contribute regardless of AGI. |
| Deadline for contribution | Contribution deadline is April 15 (not including extensions) of the following year, and distributions of excess contribution will not be subject to additional tax if made on or before June 1 of the year following contribution. |

### Student Loan Interest Deduction

| Tax incentives | An above-the-line adjustment to gross income rather than an itemized Form 1040 Schedule A deduction: up to $2,500 for 2006 for interest paid on loans for higher education expenses while at least half-time student. Deduction is allowed with respect to interest paid over any period of time. |
| Restrictions on a qualifying loan | - No deduction if student is allowed as dependent on another taxpayer’s return  
- No double benefits, as with home equity loans  
- See Final Regulations T.D. 9125, 5/6/2004, summary following Figure 6. |
| MAGI limits | Phaseout range starts at $50,000 and ends at $65,000 for singles; the range is $105,000 to $135,000 for joint returns; and the deduction is not available to married taxpayers filing separately. |

### Qualified Tuition Program

| Qualified tuition program | Sponsored by a state to purchase tuition credits or save for payment of higher education expenses. (Must be state-sponsored or an educational institution meeting requirements.) |
| Taxation of earnings | Distributee excludes earnings from taxation. Used for higher ed-If not used for qualified expense, the distributee is taxed on earnings and there is a cation in state-spon-10% penalty (some exceptions). |
| Beneficiary | The definition of family members includes first cousins. |
| Coordination with Lifetime Learning and Hope Educational Credits | Taxpayers can claim credits and exclude from income earnings distributed from this program as long as the expenses claimed are not the same as those for which a credit was claimed. |
The Hope and Lifetime Credits generally may be claimed against a taxpayer’s AMT liability for taxable years beginning before 2006, as extended in the 2004 act. The final regulations in T.D. 9125, May 6, 2004, clarifies the student loan interest deduction.

- Capitalized interest is deductible as qualified educational loan interest. Loan origination fees or late fees are considered interest if they are a charge for the use of money rather than for specific services.
- Interest payments made by someone other than the taxpayer/borrower are treated as first paid to the taxpayer and then paid by the taxpayer to the lender. If the third party pays interest on the taxpayer’s behalf as a gift, the taxpayer may deduct the interest.

The minimum threshold after subtracting income tax withholding and credits for estimated tax payments is $1,000. To avoid underpayment of estimated tax, individuals with prior-year AGI not exceeding $150,000 ($75,000 if married filing separately) must make timely estimated payments at least equal to (1) 100% of last year’s tax, or (2) 90% of the current year’s tax liability. However, for individuals who exceed the $150,000 ($75,000 if married filing separately) prior year’s AGI amount, the safe harbor is 110%. Similar rules apply to trusts and estates.

**Example 4.** Susan Ford, a salesperson, has the financial situation depicted in Figure 7.

<table>
<thead>
<tr>
<th>FIGURE 7. Susan Ford's Taxes on AGI</th>

</tr>
<tr>
<td><strong>Projected tax to be withheld in 2006</strong></td>
</tr>
</tbody>
</table>

Susan expects to owe at least $1,000 additional tax ($12,000 – $10,900 = $1,100), so she should make an estimated tax payment; however, she expects her income tax withholding ($10,900) to be at least 90% of the actual tax liability as shown on her 2006 return ($12,000 × 90% = $10,800). Therefore, Susan does not need to pay estimated tax nor will she have a penalty. Furthermore, since the amount withheld in 2006 exceeded her 2005 tax liability, she also would avoid estimated tax payments and penalties.

Farmers and fishermen who receive at least two-thirds of their total gross income from farming are exempt from estimated tax payments, providing they file and pay taxes by March 1. New York State officially follows the federal definition of gross income from farming.

**Retirement Plan Contributions**

In the tax year 2006, taxpayers have both opportunities and rewards for contributing to retirement plans. Figure 8 gives some increased limits in the plans over last year’s limitations.
The upper and lower limits of the phaseout range for deductible IRAs has increased by $5,000 for all filing statuses other than married filing separately. The deductible IRA phaseout MAGI limits for employees covered at work are as follows (dependent upon filing status):

<table>

Additional Contributions

Catch-up or additional contributions to certain retirement plans are made possible by the 2001 act for individuals aged 50 and older. These contributions are additions to the above limits, but total contributions still cannot exceed his or her earnings. The IRA contributions are still subject to AGI phaseout limits. The catch-up contribution provision does not apply to after-tax employee contributions of I.R.C. §457 plan participants in their last 3 years before retirement. Limits for catch-up contributions of certain retirement plans are given in Figure 9.

Nonrefundable Credit Allowed for Elective Deferrals and IRA Contributions

Contributions to some IRAs and employer-sponsored retirement plans are deductible or excludable from income. Beginning in 2002, the 2001 act provides a nonrefundable tax credit for contributions made to qualified plans by eligible taxpayers. The amount of the credit depends on the taxpayer’s AGI, and the maximum annual contribution eligible for the credit is $2,000. There are limits on AGI, dependent upon the taxpayer’s filing status. The AGI is determined without adjustments for I.R.C. §§911, 931, and 933 (“foreign” income adjustments). Eligible individuals include those over 17, but not if they are full-time students or claimed as dependents on someone else’s return. The credit is available on elective contributions to I.R.C. §401(k) plans, I.R.C. §403(b) annuities, I.R.C. §457 plans (eligible deferred-compensation arrangement of a state or local government), SEPs or SIMPLEs, contributions to a traditional or Roth IRA, and voluntary after-tax employee contributions to a qualified retirement plan. The credit is reduced by amounts received over a previous period, as defined in the 2001 act, by taxable distributions from any qualified retirement plan or savings arrangement listed in Figure 9.

There is an exception that excludes distributions from a Roth IRA. The AGI-based credit rates for 2004 to 2006 are given in Figure 10.

**Roth 401(k)**

A new Roth 401(k) will allow participants, after January 1, 2006, to make after-tax contributions up to the 401(k) maximum of $15,000 for 2006 (plus $5,000 catch-up if eligible). The advantage of the Roth 401(k) over the original Roth IRA is that it is not limited by the taxpayer’s MAGI. Distributions at retirement will be tax-free. Additional information will be available next year.

**Employer-Provided Education Assistance**

The exclusion for up to $5,250 of employer-paid educational assistance for undergraduates is available for courses beginning before January 1, 2011. The employer-paid education exclusion for graduate studies was effective for courses beginning in 2002 and remains until changed or until January 1, 2011. Be sure that this benefit is a written contract as an employee benefit, or the assistance might end up taxable to the employee. No more than 5% of the amounts paid by the employer during the year for educational assistance under a qualified plan can be provided to more than 5% owners of the employer and the spouses or dependents of such more than 5% owners.
The deduction for teacher’s expenses expired at the end of the 2005 tax year and was not renewed by Congress at the time of printing.

If someone dies without a will, the IRS will allow heirs to see the last tax return filed before that person’s death per Rev. Rul. 2004-68. Heirs must qualify that they have a financial interest in the information to determine if they have located all the estate’s assets.

The IRS adopted final regulations requiring a $150 user fee for processing offers in compromise. The fees are not refundable if the offer is withdrawn, rejected, or returned unprocessed. There will be no user fee for offers based solely on doubt as to liability, and no fees for low-income taxpayers (below poverty guidelines set by the Department of Health and Human Services). As previously mentioned, TIPRA requires partial payments to be submitted with an offer in compromise.

The 2002 act temporarily extended the net operating loss (NOL) carryback period to 5 years for NOLs arising in taxable years ending in 2001 and 2002. This did not affect farm NOLs that already qualify for the 5-year carryback. For NOLs arising in 2003 and later, the former 2-year carryback rule applies to nonfarm NOLs. Taxpayers are not forced to use the longer carryback period for 2001 and 2002 NOLs. Taxpayers may elect out of the 5-year period, but the election is irrevocable. Taxpayers had the choice of two elections: one to not have the 5-year carryback, and one to waive the carryback entirely. Farmers continue to have these choices regarding farm NOLs.

The 2005 line 23 for educator expense (not renewed at press time) is now drafted on the 2006 Form 1040 as Archer MSA deduction with attachment of Form 8853.

The 2005 line 34 for tuition and fees deduction (not renewed at press time) is now drafted on the 2006 Form 1040 as jury duty pay you gave to your employer.

The 2005 line 52 for child tax credit is now drafted on the 2006 Form 1040 on line 53 as residential energy credits with attachment Form 5695 in its place.
The 2005 line 53 for adoption credit is now drafted on the 2006 Form 1040 on line 54 with the credits from Form 8396, Form 8839, and Form 8859.

The 2006 draft of Form 1040 has on line 71 the credit for federal excise tax paid with attachment of Form 8913 if required.

Line 74 of the 2006 draft Form 1040 has a box for attaching Form 8888. Form 8888 allows the direct deposit of a refund to two or three different financial institution accounts. Note that any error in a refund is reflected first in the Form 8888 line 3 account.

The IRS simplified the signature requirements of tax return preparers. Notice 2004-54 says that income tax return preparers may sign original returns, amended returns, or requests for filing extensions by rubber stamp, mechanical device, or computer software program. But the taxpayer must still provide his or her true signature on the return sent to the IRS.

## Long-Term Capital Gains Rates

The paperwork on capital gains continues to be challenging. Form 1040 Schedule D itself has been simplified, but now there are two versions of the worksheet to complete, plus capital gains require careful attention to page 2 of Form 6251 (AMT). The 2003 act lowered the two basic capital gains rates to 5% and 15% (previously 10% and 20%), while leaving in place the 25% and 28% maximum rates, all dependent upon the taxpayer’s income bracket and source of the gain. A taxpayer is potentially subject to more capital gains rates than brackets for ordinary income tax calculations. Capital gain when a taxpayer disposes of an asset is taxed at maximum capital gain rates, which are lower than ordinary income brackets. Net capital gain is calculated as the excess of the net long-term capital gain over the net short-term capital loss for the tax year. A taxpayer’s gain or loss is treated as long-term only if the asset is held for more than 1 year, or 2 years in the case of certain classes of livestock covered later.

For all of 2006, the maximum rate of tax on adjusted net capital gain of an individual is 15%, or 5% if the taxpayer would have been taxed at the 10% or 15% rate on ordinary income. These lower rates apply to both regular and alternative minimum tax.

The holding period begins as normal with the day after acquisition. The 5-year holding period legislation was repealed as of May 6, 2003, so those taxpayers in the regular tax brackets above 15% who were planning to hold assets for 5 years to take advantage of the reduced 18% capital gains rate will get the new 15% on qualifying gains. Those taxpayers who elected to pay gains to date and restart the 5-year time clock not only have paid a higher rate than is in effect today but also have incurred an implied interest cost of paying taxes in advance.

Some assets are excluded from adjusted net capital gains and are ineligible for the lowest long-term rates. Gain from the sale of I.R.C. §1250 property (general-purpose buildings and other depreciable real estate) that would be ordinary income under I.R.C. §1245 depreciation recapture rules, and that has not already been taxed as ordinary gain under I.R.C. §1250, has a maximum tax rate of 25%. The maximum rate on net capital gain from the sale of collectibles and certain small business stock under I.R.C. §1202 remains at 28%.
Cattle (dairy or breeding) and horses (breeding, sport, work, or draft) must be held for 24 months to qualify for the 5% or 15% capital gain rates. The holding period for other I.R.C. §1231 assets, as well as capital assets, to qualify for these rates remains at 12 months. Short-term gains are still taxed as ordinary income.

Taxpayers who are not required to file a Form 1040 Schedule D can enter capital gain distributions from mutual funds directly on Form 1040 line 13, check the box, and calculate the tax on all taxable income on the Qualified Dividends and Capital Gain Tax Worksheet.

Installment sale payments are taxed under the ordinary or capital gain rates in effect for the year received and not those in effect in the year of the actual sale. Consequently, payments received in 2006 are eligible for the lower rates.

### Adjusted Net Capital Gain Exclusions

Adjusted net capital gain (ANCG) excludes unrecaptured gain from the sale of I.R.C. §1250 assets (general-purpose buildings), gain on collectibles, and I.R.C. §1202 small business stock gain.

### Computing Net Capital Gain

Remember that some or all of capital gain income can be taxed below its maximum rate if the taxpayer is in or below the 28% taxable income bracket. Noncorporate taxpayers will compute their net capital gains tax by applying capital gain income to the 10%, 15%, or 25% taxable income bracket in the following order:

1. If there are unused **10% or 15% taxable regular income rates** after applying the ordinary income to the 10% and 15% brackets, then
   a. Unrecaptured I.R.C. §1250 gain: The 25% maximum is reduced to the 10% or 15% ordinary tax rate, if the 10% bracket or 15% bracket is not fully used.
   b. Collectibles and other 28% rate gain assets: The 28% maximum is reduced to the 10% or 15% ordinary tax rate, if the 10% bracket or 15% bracket is not fully used.
   c. Adjusted net capital gain—remainder after (b): The 15% maximum is reduced to 5%.
2. If there are unused **25% taxable regular income rates** after applying the ordinary income to the 25% brackets, then
   a. Unrecaptured I.R.C. §1250 gain: The 25% maximum is not reduced and is taxed at the 25% rate in the 25% bracket or any higher bracket.
   b. Collectibles and other 28% rate gain assets: The 28% maximum is reduced to the 25% ordinary tax rate, if the 25% bracket is not fully used.
   c. Adjusted net capital gain—remainder after (c) (from list 1): The 15% maximum is not reduced.
3. If there are unused **28% taxable regular income rates** after applying the ordinary income to the 28% brackets, then
   a. Unrecaptured I.R.C. §1250 gain: The 25% maximum is not reduced and is taxed at the 25% rate in the 28% bracket or any higher bracket.
   b. Collectibles and other 28% rate gain assets: The 28% maximum is not reduced and is taxed at 28% in the 28% bracket or any higher bracket.
   c. Adjusted net capital gain—remainder after (c) (from list 2): The 15% maximum is not reduced.
Example 5. Mr. and Mrs. F. P. Milker file a joint return, and their 2006 15% taxable income tax bracket goes to $61,300. Their taxable income after personal exemptions and itemized deductions is $64,200, exceeding the 15% bracket by $2,900, as shown in Figure 11. Their taxable income includes $6,000 of unrecaptured I.R.C. §1250 gain from the sale of a farm building, $3,500 of capital gain from the sale of antiques, and $10,000 of ANCG from the sale of dairy cattle. All livestock sold were held over 24 months. Note that the 15% bracket was first filled with unrecaptured I.R.C. §1250 gain and the 28% rate gain collectibles, allowing them to be taxed at the 15% rate. Then the 15% bracket was filled with ANCG (from the raised cows), allowing it to be taxed at 5%. Only the balance of the ANGC was pushed into the 15% capital gains rate.

Netting Capital Gains and Losses

The following rules apply to the netting of capital gains and losses for tax years ending after May 6, 1997:

1. Short-term capital losses, including carryovers, are combined with short-term capital gains. Any net short-term capital loss is used to reduce long-term capital gains in the following order: 28% sale gain, unrecaptured I.R.C. §1250 gain (25%), and adjusted net capital gain (15%).

2. Gains and losses are netted within the four long-term capital gain groups to determine a net capital gain or loss for each group. There can be no net loss in the 25% group, which is limited to gain to the extent of straight-line depreciation.

3. A net loss from the 28% group (including long-term capital loss carryovers) is used to reduce gain in the 25% group, and then any net loss balance is carried to the lower groups.

4. A net loss from the 15% group is used to reduce gain from the 28% group, and any remaining net loss is carried to the 25% group.

Note that long-term capital loss carryovers are used to reduce gains or increase loss in the 28% group, regardless of the source of that carryover.
Net Capital Losses

A net capital loss results for the year if a taxpayer’s capital losses on Form 1040 Schedule D exceed capital gains. Only a maximum of $3,000 of any such net capital loss may be deducted in determining gross income for the current year (by transfer to page 1 of Form 1040). Any excess capital loss becomes a capital loss carryover to be used in future years (until used, there is no expiration). The capital loss carryover may be short-term, long-term, or a combination of the two, depending on whether it arises from Form 1040 Schedule D Part I, Part II, or both. In the year to which the loss is carried, the short-term capital loss carryover is entered in Part I, Form 1040 Schedule D; the long-term is entered in Part II. In either event, they net against any other gains and losses arising in this carryover year. Again, if the net result is a loss, the loss deduction is limited to $3,000, and any excess becomes a carryover to the following year. Short-term capital losses are considered used first in the event that only a portion of the capital losses of the year is deductible.

Inherited Property Rules

Legislation of recent years did not change the step-up in basis rule that gives a decedent’s property a new basis equal to its fair market value (FMV) on the date of death (or alternative valuation date). Only gain that occurs after that date will be subject to income tax. Inherited property (except for I.R.C. §1231 livestock) will automatically be considered as held for the required holding period for long-term capital gains treatment. For I.R.C. §1231 livestock, the date acquired by the decedent is used to determine the holding period.

Capital Gains and AMT, Flow-through Entities, and Small Business Stock

The new lower long-term capital gains rates will be used to compute AMT (Form 6251, page 2). Entities such as S corporations, partnerships, estates, and trusts may pass through capital gains to their owners or beneficiaries and must make the determination of when a long-term capital gain is taken into account on its books.

Practitioner Note

Taxpayers who make gifts of stock held over 1 year to their children at least 18 years old and in the 10% or 15% bracket may be able to lower their overall tax liability. Parents may want to buy back the same securities in the open market because wash-sales restrictions do not apply when capital gains are realized.

On the sale or exchange of small business stock (I.R.C. §1202 stock) held for more than 5 years, 50% of the gain may be excluded from the taxpayer’s gross income. The remaining capital gain is taxed at 28%. Gain eligible for the 50% exclusion may not exceed the greater of $10 million or 10 times the taxpayer’s basis in the stock. If such small business stock is sold before meeting the 5-year holding requirement, there is no exclusion, and the gain will be taxed at the normal maximum capital gains tax rate (if the required holding period has been met). This 50% exclusion amount is a tax preference item for AMT purposes.
Currently there is an exclusion of gain from the sale of a principal residence amounting to $250,000 ($500,000 for joint filers) on sales and exchanges made after May 6, 1997. The old rollover of gain provision (I.R.C. §1034) and the $125,000 of gain exclusion, including the 55 years of age requirement (old I.R.C. §121), were repealed and replaced with this current exclusion under I.R.C. §121.

This new exclusion can be used by taxpayers of any age on each home they have owned and used as a principal residence for at least 2 years during the 5-year period ending on the sale date. Use of the exclusion is limited to once every 2 years. Use of the old exclusion prior to May 7, 1997, does not affect the availability of the new exclusion. Married taxpayers filing joint returns get a $500,000 exclusion if all of the following apply: either spouse has owned the residence for at least 2 years, both spouses have lived in it for at least 2 years, and neither spouse has used the new exclusion in the past 2 years.

Married spouses who qualify for the $500,000 exclusion may elect to exclude $250,000 of gain from the sale of each spouse’s principal residence within a 2-year period. Those who are married and filing jointly, but are living apart, also get the $250,000 exclusion on the qualified sale of each spouse’s principal residence. A recently married spouse does not lose eligibility for the $250,000 exclusion by marrying a taxpayer that has used the exclusion within 2 years.

A partial exclusion may be claimed by taxpayers who have excluded the gain on the sale of another home sold after May 6, 1997, and within 2 years of the current sale, if the current sale was due to a change in place of employment, change in health, or unforeseen circumstances. Regulations have been issued to provide safe harbors for these reasons, including the following unforeseen circumstances:

1. Involuntary conversion of the residence
2. A natural or man-made disaster or act of war or terrorism resulting in a casualty to the residence
3. Death of a qualified individual
4. A qualified individual’s cessation of employment, making him or her eligible for unemployment compensation
5. A qualified individual’s change in employment or self-employment status that results in the taxpayer’s inability to pay housing costs and reasonable basic living expenses for the taxpayer’s household
6. A qualified individual’s divorce or legal separation under a decree of divorce or separate maintenance
7. Multiple births resulting from the same pregnancy of a qualified individual

For this purpose, qualifying individuals are (1) the taxpayer, (2) the spouse, (3) the co-owner of the property in question, or (4) a person whose principal place of abode is the taxpayer’s household.

Example 6. Mr. and Mrs. Mover sold and moved out of their first home March 2, 2006, because of a change in employment. They began renting and living in that home on June 28, 2004, but did not buy it until August 4, 2004. They lived in the home for 612 days but owned it for only 575 days. Their partial exclusion is based on the portion of the 2-year (730 days) ownership requirement that they lived in the house (575 days), the shorter of the two requirements. Their partial exclusion for 2006 is $393,850 ($500,000 × 0.7877; 0.7877 × $500,000 = $393,850); therefore Mr. and Mrs. Mover can exclude up to $393,850 of any gain realized on the sale of their residence.

Gains from insurance proceeds and other reimbursements for homes destroyed or condemned also qualify for the exclusion. The sale of a remainder interest in a home to a person related to or an entity owned by the taxpayer does not qualify. Gain equal to any depreciation allowed or allowable for the business use of a home after May 6, 1997, cannot be included in the exclusion but would be recognized as gain from the sale of I.R.C. §1250 property. However, if the structure with business use is not part of
the dwelling unit, none of the gain from that structure qualifies for exclusion. Such a separate business-use structure would be reported on Form 4797.

The final regulations state that the gain exclusion for the sale of residence applies to the sale of vacant land owned and used as part of the taxpayer’s principal residence, provided that a qualifying sale of the dwelling unit occurs within 2 years before or after the sale of the related vacant land. The vacant land must be adjacent to land containing the dwelling unit. If the residence is not sold prior to filing the tax return for the year of the vacant land sale, the gain on the land must be reported and then an amended return filed when the qualifying residence is actually sold.

Other specific rules (1) affect transfers incident to a divorce, (2) define time of ownership for surviving spouses, and (3) define periods of use for taxpayer’s transferred to nursing homes.

If any gain is to be recognized, the sale of residence is reported directly on Form 1040 Schedule D. On the line directly below that used to report the total gain, the exclusion amount (if any) is listed as a loss with a description of “Section 121 exclusion.” If no gain is to be recognized, no reporting is required, unless you have received a Form 1099-S.

---

**INCOME AVERAGING FOR FARMERS**

Individual taxpayers with certain farm income may elect a 3-year method of income averaging. Elected farm income (EFI) is deducted from the current year’s taxable income and, in effect, one-third of it is added to each of the 3 prior years’ taxable income to be taxed at the rates of those prior years (referred to as base years). However, C corporations, estates, and trusts may not use the election. The IRS reports that this tax-saving method of calculating tax is being underutilized by taxpayers.

**Elected Farm Income (EFI)**

The EFI is taxable income attributed to any farming business and designated to be included in the election. This includes not only net farm profits from Form 1040 Schedule F but also an owner’s share of net farm income from an S corporation (including wages), partnership, or limited liability company (LLC). It does not include wages from a C corporation. Gains from the sale of farm business property (excluding land and timber) regularly used in farming for a substantial period may be included in EFI. Farm NOLs must also be included. A farming business includes nursery production, sod farming, the production of ornamental trees and plants, as well as the production of livestock, fruit, nuts, vegetables, horticultural products, and field crops. However, gain from the sale of trees that are more than 6 years old when cut is not eligible farm income, because these trees are no longer classified as ornamental trees. The income, gain, or loss from the sale of grazing and development rights or other similar rights classified as attributable to a farming business are not electable for farm income.

The terms regularly used and substantial period are not defined in the I.R.C. or committee reports. Regulations (§1.1301-1) have clarified that if a taxpayer ceases farming and later sells farm business property (other than land) within a reasonable time after the cessation, the gains or losses from the sale will be considered farm income. If the sale is within 1 year, it will be deemed to be within a reasonable time. For sales beyond 1 year, one will need to consider all facts and circumstances.

The tax imposed when income averaging is elected will be the current year’s federal income tax liability without the EFI, plus the increase in the 3 prior years’ tax liability caused by the addition of one-third of the EFI to each of the years. Farm income averaging does not affect SE tax. Effective in 2004 and later years, farmers and fishermen are not affected by AMT when using income averaging.
Farm taxpayers who elect income averaging will be able to spread taxable farm income over a 4-year period and designate how much (in equal amounts in each of the 3 base years) and what type of farm income (ordinary or capital gains) to include in EFI. Form 1040 Schedule J is used to compute and report the tax from income averaging. The relevant tax rates for capital gains apply in the current year as well as in the base-year calculations.

**Example 7.** Fruit growers Mr. and Mrs. B & B Goodyear have a substantial increase in farm income in 2006. Receipts are up and costs are down. Mrs. Goodyear works off-farm. When Form 1040 Schedule F profits of $58,000 are combined with nonfarm income and deductions, taxable income is $85,300. They file a joint return. Their taxable income for 2006 and the previous 3 years is shown in Figure 12.

**TABLE 12. Goodyears’ Taxable Income**

<table>

</tr>
<tr>
<td>2003</td>
<td>25,200</td>
</tr>
</tbody>
</table>

The Goodyears elect to income average in 2006. Their maximum EFI is $58,000 (taxable income attributed to farming). Their optimum EFI may be taxable income that exceeds their 15% tax bracket or $24,000 ($85,300 – $61,300). They decide to use $24,000 of their Form 1040 Schedule F profit as EFI and tax $8,000 at the tax rates in effect in each of the 3 base years.

**Question 1.** Will all of the EFI be taxed at 15%?

**Answer 1.** In 2004 their 15% tax bracket ended at $58,100, and their taxable income was $52,050, leaving $6,050 of the 15% rate bracket available for EFI from the current year. Therefore, $1,950 ($8,000 – $6,050) added to the 2004 base-year income will be taxed at 25%.

**Question 2.** Should the Goodyears reduce EFI to avoid the 25% tax bracket in 2004?

**Answer 2.** For each $1 of EFI subject to the 25% tax rate in 2004, $2 is taxed at 15% in the other base years. Therefore, the marginal tax rate for the Goodyear’s EFI is 18.33% [(15 + 15 + 25) ÷ 3]. If they put less than $24,000 in the 2006 EFI, their 2006 taxable income will exceed $61,300, and their marginal tax rate will be 25%.

**Question 3.** How much income tax will the Goodyears save by income averaging in 2006?

**Answer 3.** They will save 10% (25% rate – 15% rate) on the first $18,150 (3 × $6,050) or $1,815, and 6.67% (25% – 18.33%) on the remaining $5,850 of EFI or $390, for a total tax reduction of $2,205.

---

**Base-Year Losses**

The IRS allows the use of negative taxable incomes in the base years when performing the income-averaging calculation. This, in effect, allows such taxpayers to income average using 0% tax rates for the base years with eligible losses. However, there can be no double benefit from the negative taxable incomes already reflected in the NOL arising from that year.
Example 8. Sam had a $45,000 Schedule F loss in 2003. He and his wife filed a joint return and claimed 5 exemptions (including 3 children). Taxable income was calculated as shown in Figure 13.

<table>
<thead>
<tr>
<th>FIGURE 13. Sam’s Taxable Income</th>
</tr>
</thead>
<tbody>
<tr>
<td>Schedule F</td>
</tr>
<tr>
<td>Standard deduction</td>
</tr>
<tr>
<td>Exemptions</td>
</tr>
<tr>
<td>Taxable income</td>
</tr>
</tbody>
</table>

Sam’s NOL for 2003 would be $45,000. This NOL must be removed from taxable income, leaving ($24,750) to be used as base-year income for 2003 on Sam’s Schedule J.

Questions and Answers

Question 1. Which taxpayers qualify for farm income tax averaging?

Answer 1. I.R.C. §1301 says that “individuals engaged in a farming business” qualify, and it specifically excludes estates and trusts. The IRS instructions indicate that individual owners of partnerships, LLCs, and S corporations qualify (farm income flows through the business and retains its character in the hands of the individual owner taxpayer). C corporations and their owners do not qualify for farm income averaging.

Question 2. Does the EFI retain its character as unused brackets are carried forward, and may the taxpayer select the type of income to include in EFI?

Answer 2. Taxpayers will be allowed to carry forward the unused lower brackets as ordinary farm income and keep capital gains in current-year taxable income, or select the best combination of ordinary farm income and qualified capital gains to meet their tax management objectives. When a combination of ordinary farm income and capital gains is included in EFI, the IRS indicates that an equal portion of each type of income must be added to each base year. The taxpayer cannot add all of the capital gains to a single prior year.

Any capital gain that is added to base-year income will be treated at the capital gains tax rate in effect for that prior year. Therefore, 2006 farm business gains of a taxpayer in a 25% income tax bracket could be eligible for a 5% capital gains tax rate if the taxpayer has a base year in the 15% income tax bracket and includes these gains in elected farm income.

Question 3. Do farm owners who rent their farm or land for agricultural production qualify?

Answer 3. If the farm owner materially participates in the farming activity and properly reports the income on Form 1040 Schedule F, this income qualifies for income averaging. Final regulations also make this true if the farm owner does not materially participate but receives share rental income (properly reported on Form 4835). This is a change from prior interpretation. For crop-share rents received after January 1, 2003, the lessor needs to have a written crop-share lease agreement. Cash rental income reported on Form 1040 Schedule E is not income attributable to a farming business.
Question 4. How much farm use is required to meet the “regularly used in farming” rule that applies to gains from the sale of farm business property?

Answer 4. All sales reported on Form 1040 Schedule F are qualified. Sales of raised dairy and breeding livestock reported on Form 4797 qualify. Sales of farm property for which depreciation and I.R.C. §179 deductions are claimed also qualify. Therefore, it appears as if all sales of farm machinery, buildings, livestock, and other eligible I.R.C. §1231 property qualify as being “regularly used.”

Question 5. If I.R.C. §1231 gain is part of EFI, is it subject to recapture because of unrecaptured I.R.C. §1231 losses in the base years?

Answer 5. Final regulations indicate that I.R.C. §1231 gains would be taxed at the long-term capital gains rate for the prior year. The I.R.C. §1231 loss of that prior year remains fully deductible from ordinary income, and the I.R.C. §1231 loss carryover to subsequent years is unchanged.

Question 6. Can the election to income average be made on an amended return?

Answer 6. Final regulations changed the answer to this question to “yes.” The previous requirement that income averaging could only be amended if there is another change on the return was rescinded.

Question 7. If a prior-year return reflected an NOL carryover that was only partially applied, will any additional NOL carryover be used in that prior year when one-third of this year’s EFI is “carried to a base year”?

Answer 7. No, the amount of the NOL applied is not refigured to offset the EFI added to that prior year. Similarly, the base-year’s income, deductions, and credits are not affected by the additional income allocated to that year (for example, the taxable portion of social security benefits or the allowable Form 1040 Schedule A Itemized Deductions). In essence, Form 1040 Schedule J uses the tax brackets of the base years without altering the tax returns originally filed for those base years.

Question 8. Must a taxpayer use the same filing status in each year?

Answer 8. No, the tax will be computed based on the filing status in effect for each base year and the election year.

Question 9. What tax rate will be used for the “kiddie tax” when income averaging has been used on the parents’ tax return?

Answer 9. The tax rate is the parents’ effective tax rate after farm income averaging has been applied.

Question 10. Can a taxpayer use income averaging even though it provides no current-year tax savings?

Answer 10. Yes, although you may have to override your tax preparation software in order to print the Form 1040 Schedule J. This technique may be used to shift income to the oldest base-period year, which will drop out of the calculations for the following year. This may allow the base-period incomes (and marginal tax rates) to even out in anticipation of income averaging in future years. Note that optimizing base-period income has become easier again with tax brackets being the same for the current and all three base years.
Question 11. Can the use of income averaging create or increase AMT liability?

Answer 11. No, because lawmakers voted in October 2004 to permit income tax to be determined for the AMT comparative computation without regard to income averaging. That is, tentative AMT is compared to regular income tax before income averaging.

Planning Guidelines and Information

Implement economically sound income tax management practices throughout the year rather than use income averaging as the only tax management strategy. Use tax management practices that reduce taxable income and then elect income averaging as needed.

Income averaging should be used to transfer as much high-bracket income as possible from the election year to low tax brackets in the base years. There will be cases in which the EFI used in a base year is not taxed in the lowest bracket, but income averaging will still save taxes. A farm taxpayer needs the following information to determine whether and how much 2006 farm income should be averaged:

- Taxable income for 2006 as well as ordinary income and capital gain attributed to farming
- Taxable income from his or her 2003, 2004, and 2005 tax returns
- Taxable income tax brackets for 2006 and the 3 prior years (see Figure 14)

Priority of Goals

1. Elect farm income until the marginal rate of the current year is not greater than the average of the marginal rates at which the elected farm income is being taxed in the base years. Be sure to consider the effective rate if capital gains exist in the base year or are included in EFI.
2. Then, load the oldest base year followed by an equal amount in the other base years to the extent this can be done without increasing tax.
3. Finally, elect additional income attempting to level the income of the current and prior 2 base years to prepare these years to be base years for next year’s income averaging, again, only to the extent this can be done without increasing tax.
When market prices for commodities fall below the marketing assistance loan rates offered by the Commodity Credit Corporation (CCC), producers may realize more income by taking advantage of one or more of the government options. Those options and the income tax consequences are discussed in this section.

</table>
Instead of selling a commodity, producers can use the commodity as collateral for a nonrecourse loan from the CCC. This option puts cash in the producer’s pocket at the time of harvest and lets the producer wait to see whether market prices improve.

I.R.C. §77 provides for an election to treat these loans as income in the year received. The election is made on Form 1040 Schedule F. If the producer has not made the I.R.C. §77 election, the CCC loan is treated the same as any other loan. Rev. Proc. 2002-9 provides procedures for an automatic change in accounting methods in the event that a taxpayer wishes to stop reporting loans as income.

If market prices subsequently rise above the loan rate, producers will choose to repay the loan, with interest, and then sell the commodity for more than the loan.

If market prices do not rise above the loan rate, producers will choose to redeem the commodity by paying the posted county price (PCP) to the CCC. By making that payment, the producer is no longer obligated on the loan and can keep the difference between the original loan rate and the PCP. This option replaces the option of forfeiting the grain to the CCC under the old loan program.

A producer who redeems the commodity by paying the PCP will receive a Form CCC-1099-G from the CCC for the difference between the loan rate and the PCP. That amount must generally be reported as an Agricultural Program Payment on Form 1040 Schedule F. This is true even if the producer uses CCC certificates rather than cash to repay the loan and, as a result, does not receive a CCC-1099-G.

However, if the producer made an I.R.C. §77 election, the difference between the loan rate and the PCP is not reported as taxable, because the full loan amount has already been reported in taxable income in the year received. Instead, this difference is subtracted from the producer’s basis in the commodity so that the producer now has basis in the commodity only equal to the PCP. The producer should still report the market gain on line 6a on Form 1040 Schedule F but not include it as taxable on line 6b.

If market prices are below loan rates, producers can simply claim a loan deficiency payment (LDP) for their crops, rather than borrowing from CCC. That payment is equal to the difference between the loan rate and the PCP on the date the LDP is claimed. Producers get the same result as if they had taken the loan and paid the PCP rate on the date they claimed the LDP.

The LDP is reported as an Agricultural Program Payment.

Note that reconciling taxpayer records to the amounts reported on Form CCC-1099-G can be challenging:

- CCC loan activity is not reported on the Form 1099. Borrowings and program payments may be commingled in taxpayer records.
■ Often, advance government payments are made. Then, if market conditions are better than expected, these advances must be repaid. Sometimes these payments are simply netted from subsequent government payments; at other times they are paid by taxpayer check and can be confused with PCP “purchase” payments or repayments of CCC loans.

■ Program payments are typically direct deposited to the producer’s bank account. Sometimes these payments are applied directly to CCC loan payments.

■ Interest paid to CCC on loans is not reported to the taxpayer on a Form 1099.

PROVISIONS APPLYING PRIMARILY TO BUSINESS ACTIVITY

Energy Credits for Home Builders and Appliance Manufacturers

Builders of new energy-efficient homes may qualify for a $2,000 income tax credit in 2006 and 2007. The homes must be substantially completed after August 8, 2005, and be certified to have a 50% reduction in annual heating and cooling energy consumption. Manufactured homes will also qualify, and if they do not meet the 50% standard, but meet a 30% standard, they will qualify for a $1,000 credit.

Residential appliances (dishwashers, clothes washers, refrigerators) produced in 2006 and 2007 that have energy savings of 15% to 25% will qualify for a $75 to $175 credit to the manufacturer.

Business Record Keeping

Record keeping is probably one of the tasks that many farmers and small business operators enjoy the least. However, as this reference manual indicates, it is very important to the business. The tax laws covering farming and small businesses are very complicated.

The advantage of a good set of records is that they will help the business do the following:

■ Prepare a tax return
■ Support receipts and deductible expenses on a tax return
■ Prepare accurate financial statements
■ Chart and monitor the progress of the business

The IRS indicates that you must keep these business records to prove the income or deductions on a tax return. The period of time varies dependent upon the individual business situation (Figure 15). The period of retention is never less than 3 years from the due date of the return and can be for a lifetime. The taxpayer should always keep copies of his or her filed tax returns.

**Business Use of Home**

Expenses associated with the business use of the home are deductible only if they can be attributed to a portion of the home or separate structure used exclusively and regularly as the taxpayer’s principal place of business for any trade or business, or a place where the taxpayer meets or “deals with” customers or clients in the ordinary course of business. Because a farmer’s principal place of business is the entire farm, and most farmers live in homes that are on the farm, an office in their home would be at their principal place of business (IRS Pub. 225). A self-employed farmer who lives on the farm must still use the home office exclusively and regularly for farm business in order to deduct the applicable business use of home expenses.

Exclusive use means only for business. If a farmer uses the family den, dining room, or his or her bedroom as an office, it does not qualify. Regular use means on a continuing basis, and a regular pattern of use should be established. Regular use does not mean constant use. The office should be used regularly in the normal course of the taxpayer’s business.

For tax years beginning after December 31, 1998, the home-office rules are more relaxed. The definition of principal place of business was expanded. It allows a deduction for administration and management, even though the work is performed elsewhere. I.R.C. §280A(c)(1) indicates that a home office will qualify as the principal place of business if (1) the office in the home is used for the administrative or management activities of the taxpayer’s trade or business, and (2) there is no other fixed location where the taxpayer conducts substantial administrative or management activities of the trade or business. All other rules continue to apply. The space must be used exclusively and regularly for business. IRS Pub. 587, *Business Use of Your Home*, provides examples that describe situations in which a taxpayer’s home office will qualify.

Farmers who reside off the farm, crop consultants, and sales representatives will be allowed home-office deductions if they meet two additional rules: Home-office activities must be equal to or of greater importance to their trade or business than are non-office activities, and time spent at the home office must be greater than that devoted to non-office activities.

Form 1040 Schedule C filers who claim expenses for business use of the home must file Form 8829. Form 4562 will be required if it is the first year the taxpayer claims such expenses. Limitations on use of home expenses as business deductions are calculated on Form 8829.
Form 8829, Expenses for Business Use of Your Home, is not filed with Form 1040 Schedule F, but it may be used as a worksheet to help farmers determine the appropriate expenses to claim. Applicable expenses for business use of the home include a percentage of the interest, taxes, insurance, repairs, utilities, and depreciation claimed.

**Caution**—When a taxpayer sells a home on which expenses for business use have been claimed, tax consequences may occur. Final Treas. Regs. under I.R.C. §121 reflect a taxpayer-friendly change by the IRS. Previously, the IRS had indicated that any portion of the residence used for business could disqualify that portion from exclusion if that portion was not used as the taxpayer’s principal residence for at least 2 out of the 5 years prior to sale. Under the final regulations, as long as the home office is part of the “dwelling unit” of the residence, then only the gain equal to the depreciation allowed or allowable after May 6, 1997, is treated as taxable gain. However, if the office is in a building separate from the dwelling unit, a portion of the gain must still be allocated to that office and reported on Form 4797 under the normal rules for the sale of business property.

**Transportation Expenses**

When a taxpayer has two established places of business, the cost of traveling between them is deductible as an ordinary and necessary business expense under I.R.C. §162, because the taxpayer generally travels between them for business reasons. However, when one business is located at or near the taxpayer’s residence, the reason for travel can be questioned. In Rev. Rul. 94-47, the IRS takes the position that transportation expenses incurred in travel from the residence are deductible only if the travel is undertaken in the same trade or business as the one that qualifies the taxpayer for a deductible home office. The expense of commuting from personal residence to place of business is not deductible.

Business trip expenses for a spouse, dependent, or other individual are not deductible unless the person is an employee of the person paying for or reimbursing the expenses; the travel is for a bona fide business purpose; and the expenses for the spouse, dependent, or other individual would otherwise be deductible.

**Provisions for Health Insurance and Medical Expenses**

**Self-Employed Health Insurance Premiums**

This tax provision allows self-employed taxpayers to deduct 100% of health insurance premiums paid as an adjustment to income on Form 1040. Also, if you pay premiums on a qualified long-term care contract for yourself, your spouse, or your dependents, you can include these premiums (subject to the annual limits stated previously). Self-employed taxpayers include sole proprietors, partners, and less than 2% S corporation shareholders.

Qualified health insurance premiums are limited to health insurance coverage of the taxpayer and the taxpayer’s spouse and dependents. The deduction may not exceed earned income. (This may be another reason to elect the optional method of computing self-employment tax in a farm loss year.) It does not reduce income subject to self-employment tax, and the amount deducted as an adjustment to gross income may not be included in medical expenses claimed as itemized deductions. A taxpayer eligible for coverage in an employer’s subsidized health insurance plan may not deduct insurance premiums he or she pays, even if it is the taxpayer’s spouse that is the employee. Eligibility is tested monthly.

---

Provisions for Health Insurance and Medical Expenses 51
Medical Saving Programs

The Health Savings Account (HSA) was originally introduced in 2004 to take the place of the Archer Medical Savings Account (MSA). These accounts provided an opportunity for taxpayers to save tax-deferred income for future health needs. Health savings accounts are an improvement over MSAs. Contributions to an HSA may be made by the employer, the employee, or a member of the employee’s family. The contributions are tax-deductible and withdrawals are tax-free if used for qualifying medical expenses. To qualify for an HSA, the individual must be covered under a high-deductible health plan (HDHP) and no other general health insurance plan. The HSAs are tax-exempt accounts with a financial institution in which employees of a small employer or self-employed taxpayer save money for future medical expenses. For details on this program, see IRS Pub. 969, *Health Savings Accounts and Other Tax-Favored Health Plans*.

Employee Health and Accidental Insurance Plans

An employer can claim premiums paid on employee health and accident insurance plans as a business expense on Form 1040 Schedule F or C. As a qualified fringe benefit, the payments are not included in employee income [I.R.C. §105 (b)]. Plans purchased from a third party (an insured plan), as well as self-insured plans, qualify, but the latter are subject to nondiscrimination rules.

A written plan is not required if it is purchased through a third-party insurer. Self-insured plans must have a written document that describes the expenses and benefits paid by the employer. A plan that reimburses an employee for health insurance premiums paid by the employee can work, but direct payment of premiums by the employer is less complicated.

Health insurance purchased for an employee’s family qualifies, even if a member of that family is the employer. A taxpayer operating a business as a sole proprietorship can employ his or her spouse, provide health insurance that covers the spouse-employee and the family of the spouse-employee (including the employer), and deduct the cost as a business expense (Rev. Rul. 71-588). With the increase in the deduction for self-employed health insurance premiums to 100%, there will be less incentive to have the spouse on payroll for this purpose. However, as a business deduction, the use of this fringe benefit deduction would reduce the employer’s self-employment tax. Note that paying cash wages in addition to providing this fringe benefit may actually result in an increase in social security taxes for the couple (if the employer’s earnings are above the earnings base) and a potential reduction in social security benefits to the employer.

The following rules apply when the taxpayer employs his or her spouse, pays the family health insurance premiums as a nontaxable employee benefit, and deducts them as a business expense:

1. The spouse must be a bona fide employee with specific duties, and the salary and benefits received must be proportionate to the duties.
2. The employer must file all payroll reports, withhold income and FICA taxes, and furnish a Form W-2 to the employee. The taxpayer may question the value of this added bookkeeping and paperwork unless the business is already doing payroll reporting.

Automobile expenses are deductible if incurred in a trade or business or in the production of income. Actual costs or the standard mileage rate method may be used. The 2006 standard mileage rate is 44.5¢ per mile for all business miles driven (leased as well as purchased vehicles). The standard mileage rate may not be used when the automobile has been depreciated using a method other than straight-line, or the vehicle is used for hire. The standard mileage rate may be used on up to four vehicles. The use of I.R.C. §179, accelerated cost recovery system (ACRS), or modified accelerated cost recovery system (MACRS) may be used in addition to the standard mileage rate. The standard mileage rate is 50¢ per mile for 2006.
(MACRS) depreciation also causes disqualification from using the standard rate. When a taxpayer uses the standard rate on a vehicle in the first year it is used in the business, the taxpayer is making an election not to use MACRS depreciation or I.R.C. §179.

**Cell Phones Used for Business**

The IRS has some very strict rules on the deductibility of cell phone expenses. They require detailed records of business use, and deductions based on estimates are disallowed according to the Tax Court (T.C. Memo 2001-165). Businesses must have a logbook or similar documentation for substantiation.

**Return Preparers Have to Issue Privacy Policy Statements**

Under Reg. 16 CFR Part 313, effective July 1, 2001, all financial institutions, including accountants or other tax preparation services that are in the business of completing tax returns, must provide a privacy policy disclosure statement to customers. All existing customers must be provided with a notice, and it must be provided to all new customers. All customers must also be provided with a copy at least annually. See the regulation for the specific information to be provided in the disclosure statement.

**New York Employer’s Annual FUTA Return**

New York State employers return to normal Federal Unemployment Tax Act (FUTA) payments but still must use Form 940. In both 2004 and 2005 the NYS Department of Labor informed NYS employers that their FUTA rate had to be increased since the state had not repaid all of the loans made by the federal government to the state’s Unemployment Insurance Trust Fund. These loans had been incurred to meet unemployment insurance benefit obligations resulting from the September 11 attacks and the resulting economic downturn in the state.

Since New York was able to repay loans from the federal unemployment fund during 2006, New York employers will be able to claim a full FUTA tax credit of 5.4% if they have paid their state unemployment taxes in full and on time. This results in an effective FUTA tax rate of 0.8%.

**CORPORATE AND PARTNERSHIP PROVISIONS**

**Corporations**

C (regular) corporations are subject to federal income tax rates ranging from 15% to 39%. Capital gains are taxed at the regular corporate rates. A personal service corporation is taxed at a flat rate of 35%. The 2006 tax rates for small businesses are given in Figure 16.
Salaries and qualified benefits paid to corporate officers and employees are deducted in computing corporate taxable income, but dividends paid to stockholders come from corporate profits that are taxed in the C corporation. Corporate dividends are also included in the stockholders' taxable income.

If the estimated tax for the year is expected to be $500 or more, a corporation is required to make estimated tax payments equal to the lesser of 100% of the tax shown on its return for the current year or 100% of last year’s tax (the prior year’s tax must be greater than $0).

Corporations that have elected S status are generally not tax-paying entities but must file Form 1120S. S corporation shareholders will include their share of business income, deductions, losses, and credits on their individual returns.

The AMT has been repealed, effective January 1, 1998, for small corporations (not more than $22.5 million of total gross receipts in the preceding 3-year period).

Farm family C corporations (at least 50% of stock owned by members of the same family) with annual gross receipts exceeding $25 million in any year after 1985 must use accrual tax accounting. Additional exceptions to accrual accounting are provided for S corporations and C corporations engaged in operating a nursery or raising or harvesting trees (other than fruit or nut trees). When farm corporations become subject to the gross receipt rule and are required to change to accrual accounting, an adjustment (I.R.C. §481) resulting from the change is included in gross income over a 4-year period, beginning with the year of the change.

Schedules L, M-1, and M-2 on Form 1120

Small corporations—those with less than $250,000 in gross receipts and less than $250,000 in assets—no longer have to complete Schedules L, M-1, and M-2 of Form 1120; Parts III and IV of Form 1120-A; or Schedules L and M-1 of Form 1120S (IRB 2002-48). Even though the IRS does not require these records, the companies will still want to maintain records dealing with assets, liabilities, and equity, in addition to the reconciliation needed to arrive at taxable income.

A partnership that fails to file a timely and complete return is subject to penalty unless it can show reasonable cause for not filing Form 1065. A family farm partnership with 10 or fewer partners will usually be considered as meeting this requirement if it can show that all partners have fully reported their shares of all partnership items on their timely filed income tax returns. Each partner’s proportionate share of each partnership item must be the same, and there may be no foreign or corporate partners.

Schedules L, M-1, and M-2 on Form 1065 are to be completed on all partnership returns unless all three of the following apply: (1) the partnership’s total receipts are less than $250,000, (2) total partnership assets are less than $600,000, and (3) Schedules K-1 are filed and furnished to the partners on or before the due date of the partnership return, including extensions.
Limited liability companies with more than one member will file Form 1065 unless they elect to be taxed as corporations.

Premiums for health insurance paid by a partnership on behalf of a partner for services as a partner are treated as guaranteed payments (usually deductible on Form 1065 as a business expense, listed on Schedules K and K-1, and reported as partner income on Form 1040 Schedule E). A partner who qualifies can deduct 100% of the health insurance premiums paid by the partnership on his or her behalf as an adjustment to income on Form 1040. According to IRS instructions, the health insurance may instead be treated as a distribution to the partner with the resulting effect on capital accounts.

Partnership tax returns may now be filed electronically. Paper Form 8453-P must still be filed by the partnership.

INCOME TAX IMPLICATIONS OF CONSERVATION AND ENVIRONMENTAL PAYMENTS AND GRANTS RECEIVED BY FARMERS

Farmers and participating landowners are receiving New York State or federal grants and payments for a number of different conservation and environmental programs. Here is a review of the income tax consequences associated with some of the programs.

Cost-Sharing Payments under I.R.C. §126

Cost-sharing payments that qualify under I.R.C. §126 may be excluded from income reported by farmers. Several federal and state programs have been certified under I.R.C. §126. On a federal level, these include the Wetlands Reserve Program, the Soil and Water Conservation Assistance Program, the Agricultural Management Assistance Program, the Conservation Reserve Program, and the Forestland Enhancement Program. On a New York State level, eligible programs include the NYS Agricultural Non-Point Pollution Grant Program, the NYC Watershed Agricultural Program, and other watershed protection programs. To be excluded, the payment must be for capital expenditures such as concrete pads, storage tanks, tile drains, diversion ditches, and manure storage. The fact that the agency states that the payments qualify under I.R.C. §126 is not sufficient to allow exclusion. Payments for items that can be expensed on Form 1040 Schedule F, including soil and water conservation expenses, may not be excluded. A portion of a payment that increases annual gross receipts from the improved property by more than 10% or $2.50 times the number of affected acres may not be excludable. The depreciable basis of the improvement is reduced by the amount of payment excluded from gross income.

All excluded I.R.C. §126 payments are subject to recapture as ordinary income to the extent that there is gain upon sale of the property within 10 years of receiving the payment (I.R.C. §1255). If the property is sold after 10 and before 20 years, a declining percentage of the excluded payment is recaptured.
Farmers enrolled in the Conservation Reserve Program (CRP) are compensated for converting erodible cropland to less intensive use. They receive annual CRP rental payments that are ordinary income. Whether the payments are Form 1040 Schedule F income subject to self-employment tax, or are Form 1040 Schedule E or Form 4835 income not subject to self-employment tax, depends on the following conditions:

- If the taxpayer receiving CRP payments is materially participating in a farming business that includes the enrolled land, the CRP payments are Form 1040 Schedule F income. The Sixth Circuit has reversed the Tax Court (Wuebker) case, which had treated the CRP payments as non–self-employment income to be reported on Form 1040 Schedule E.
- If the taxpayer is a nonparticipating landlord, and the taxpayer hires someone to manage the CRP acreage, the payments are Form 1040 Schedule E income.
- If the taxpayer was and is a nonmaterially participating crop-share lessor before and after entering the CRP, the payments are Form 4835 income.

Farmers and other landowners may be receiving permanent or nonpermanent easement payments for enrolling land in the Wetlands Reserve Program (WRP) where its use is limited to hunting, fishing, periodic grazing, haying, and managed timber production. Permanent easements may be a lump-sum payment or range from 5 to 30 annual payments. Nonpermanent easement payments must be extended over 5 or more years. Landowners participating in the WRP are also eligible for cost-sharing payments to restore the land to a healthy wetland condition.

Granting a permanent easement results in the same tax consequence as selling development rights. The taxpayer is allowed to reduce the entire basis in the underlying property before reporting gain from the easement (Rev. Rul. 77-414). If the land has been held for more than 1 year, the gain is I.R.C. §1231 capital gain.

Example 9. True Wetland enrolls 100 acres under the WRP permanent easement option and receives $500 per acre, or $50,000. The basis of the 100 acres, purchased in 1960, is $20,000. True reduces the basis to $0 and realizes a $30,000 capital gain.

Permanent easement payments spread over more than the first year should be reported as installment sales. Because interest is not included in any current WRP contract, it must be imputed, and a portion of each payment must be allocated to interest. The grantor of a discounted or bargain sale permanent easement may be able to claim a charitable deduction for the difference between its value and the price received.

Nonpermanent easement payments are ordinary income unless the taxpayer accepts the position taken by the American Farmland Trust and reports them in the same way as perpetual or permanent easement payments. The IRS and the Tax Court say that the payments are ordinary income, and if the taxpayer continues to use the land in an associated farming or timber activity, they are included in self-employment income.

Cost-sharing payments under the WRP are eligible to be excluded under I.R.C. §126. Otherwise these restoration payments are reported as Form 1040 Schedule F income, where they may be offset by the restoration costs. If the taxpayer continues to farm, some or all of the cost-sharing payments may
qualify to be deducted as soil and water conservation expenses (subject to the 25% of gross farming income limitation) or depreciated as improvements. Income and expenses associated with managing and maintaining the WRP land are reported on Form 1040 Schedules F or C.

**INCOME FROM CANCELLATION OF DEBT AND RECAPTURE AGREEMENTS**

The tax law specifies that cancellation of debt, called **discharge-of-indebtedness income** (DII), is ordinary income to the borrower. In many situations, the DII does not result in taxable income. In return for not reporting the income, the taxpayer must reduce tax attributes, such as investment credit, NOLs, and basis in assets, which may result in tax liability for the taxpayer in future years.

Solvent and insolvent farmers receive no relief from gain triggered on property transferred in settlement of debt. The difference between basis and FMV is gain to be reported in the same manner as if the property had been sold. Only debt discharge in excess of the FMV of the relinquished property is considered DII. The FMV is ignored for nonrecourse debt, and the entire difference between the basis of property transferred and the debt canceled is gain or loss.

**Bankrupt and Insolvent Debtor Rules**

For bankrupt or insolvent debtors, if canceled debt exceeds total tax attributes, the excess canceled debt is not reported as taxable income. However, if cancellation of debt outside of bankruptcy causes a taxpayer to become solvent, the solvent debtor rules must be applied to the DII equal to the amount of solvency.

**Solvent Farmer Rules**

In order to qualify for the solvent farmer rules, discharged debt (DD) must be **qualified farm indebtedness**, which is debt incurred directly in connection with the operation of the farm business. Additional qualified farm indebtedness rules are as follows: (1) 50% or more of the aggregate gross receipts of the farmer for the 3 previous years must have been attributable to farming; and (2) the discharging creditor must (a) be in the business of lending money, (b) not be related to the farmer, (c) not have sold the property to the farmer, and (d) not receive a fee for the farmer’s investment in the property. These rules are quite restrictive and will prevent some solvent farmers from using tax attributes to offset DII.

Solvent farmers must reduce tax attributes in exchange for not reporting DII as income. The basis reduction for property owned by the solvent taxpayer must take place in the following order: (1) depreciable assets, (2) land held for use in farming, and (3) other property. The general rule that basis may not be reduced below the amount of the taxpayer’s remaining debt does not apply under these special solvent farmer rules. The DII remaining after tax attributes have been reduced must be included in a solvent farmer’s taxable income. If the DII exceeds the total tax attributes, all the tax attributes will be given up and the excess of DII over the tax attributes will be included in income and may cause a tax liability.

Discharge of indebtedness is not includable in income if the transaction is a purchase price reduction [I.R.C. §108(c)(5)].
Some farm owners were required to give the Farm Service Agency (FSA) a shared appreciation agreement or a recapture agreement in exchange for the discharge of debt. The agreement allows FSA (formerly FmHA) to recapture part of the debt that was previously discharged if the farm is sold for more than the appraised value at time of discharge. If the taxpayer treated the debt reduction as DII for tax purposes at the time of the workout, then an FSA recapture will trigger a tax consequence. A typical appreciation agreement would obligate the farmer to pay the FSA the lesser of (1) the excess of the amount received when the farm is sold over the amount paid to FSA under the agreement, or (2) the difference between the FMV of the farm at buyout and the amount paid under the agreement. When DD is recaptured, the tax treatment of some DII may need to be changed. The DII originally recognized as ordinary income now becomes a deduction against ordinary income. The DD offset by a reduction in attributes is added back to the same attributes, and the DD not recognized under insolvency rules requires no adjustment.

**LIKE-KIND EXCHANGES**

Taxpayers may postpone recognition of gain on property they relinquish if they exchange that property for property that is like kind. The gain is postponed by not recognizing the gain realized on the relinquished property and reducing the basis in the acquired property. Both the relinquished property and the acquired property must be used in a trade or business or held for investment [I.R.C. §1031(a)(1)]. This section provides a summary of these rules [Reg. §1.1031(k)-1].

**Rules and Requirements**

The first requirement is that the transaction must actually be an exchange of qualifying property. A sale of property followed by a purchase of a like kind does not qualify for nonrecognition under I.R.C. §1031. Gain or loss is recognized if the taxpayer actually or constructively receives money or non–like-kind property before the taxpayer actually receives the like-kind replacement property. Property received by the taxpayer will be treated as property not of a like kind if it is not identified before the end of the identification period or the identified replacement of property is not received before the end of the exchange period.

The identification period begins the day the taxpayer transfers the relinquished property and ends at midnight 45 days later. The exchange period begins on the day the taxpayer transfers the relinquished property and ends on the earlier of 180 days later or the due date (including extensions) for the taxpayer's tax return. (If more than one property is relinquished, then the exchange period begins with the earliest transfer date.)

Deferral of tax is also possible with reverse like-kind exchanges (in which the seller acquires replacement property before the original property is sold). Rev. Proc. 2000-37 outlines the very exacting requirements that must be met for such swaps to qualify as like-kind exchanges.
Replacement Property

Replacement property is identified only if it is designated as such in a written document signed by the taxpayer and is properly delivered before the end of the identification period to a person obligated to transfer the property to the taxpayer. Replacement property must be clearly described in a written document (real property by legal description and street address; personal property by make, model, and year). In general, the taxpayer can identify from one to three properties as replacement property. However, there can be any number of properties identified as long as their aggregate FMV at the end of the identification period does not exceed 200% of the aggregate FMV of all the relinquished properties (the 200% rule). Identification of replacement property can be revoked in a signed written document properly delivered at any time before the end of the identification period.

Identified replacement property is received before the end of the exchange period if the taxpayer actually receives it before the end of the exchange period and the replacement property received is substantially the same property as that identified. A transfer of property in a deferred exchange will not fail to qualify for nonrecognition of gain merely because the replacement property is not in existence or is being produced at the time it is identified.

If the taxpayer is in actual or constructive receipt of money or other property before receiving the replacement property, the transaction is a sale and not a deferred exchange (unless the reverse exchange requirements are met). The determination of whether the taxpayer is in actual or constructive receipt of money or replacement property is made without regard to certain arrangements made to ensure that the other party carries out its obligation to transfer the replacement property. These arrangements include replacement property secured or guaranteed by a mortgage, deed of trust, or other security interest in property; by a standby letter of credit as defined in the regulations; or by a guarantee of a third party. It is also made without regard to the fact that the transferee is secured by cash, if the cash is held in a qualified escrow account or trust.

Qualified Escrow Account and Intermediary

A qualified escrow account or trust is one in which the escrow holder or trustee is not the taxpayer or a disqualified person, and the taxpayer’s right to receive, pledge, borrow, or otherwise obtain the benefits of the cash are limited until the transaction is closed.

A qualified intermediary (Q/I) is a person who is not the taxpayer or a disqualified person and acts to facilitate the deferred exchange by entering into an agreement with the taxpayer for the exchange of properties. A Q/I enters into a written agreement with the taxpayer, acquires the relinquished property from the taxpayer, and transfers the relinquished property and the replacement property.

The taxpayer’s agent at the time of the transaction is a disqualified person. An agent is a person who has acted as the taxpayer’s employee, attorney, accountant, investment banker or broker, or real estate agent or broker within the 2-year period ending on the date of the transfer of the first of the relinquished properties.

Real Property

For real property, like kind is interpreted very broadly. Any real estate can be exchanged for any other real estate and qualify for I.R.C. §1031 as long as the relinquished property was, and the acquired property is, used in a trade or business or held for investment. Consequently, a farm can be exchanged for city real estate and improved real estate can be exchanged for unimproved real estate. However, care
must be exercised to ensure that any I.R.C. §1245 property included as part of the real estate given up is replaced with an equal amount of such property in the replacement real estate received. I.R.C. §1245 property includes single-purpose livestock and horticultural facilities, silos, grain bins, and drainage tile.

**Farm Business Personal Property**

*Like kind* is interpreted to mean *like class* for personal property. Under final regulations issued May 18, 2005, *like class* means that both the relinquished and replaced properties are in the same product class under the North American Industry Classification System (NAICS). Previously, property was classified under the Standard Industrial Classification (SIC) System. Generally, this will have no impact on the classifications previously used for farm property to qualify as like kind.

Most equipment used in a farm business is included in product class 33311, which includes items such as combines, planters, tractors, plows, haying equipment, and milking machines. Farmers will generally qualify for I.R.C. §1031 treatment when they exchange farm equipment for farm equipment. However, automobiles, general-purpose trucks, heavy general-purpose trucks, information systems, and other office equipment are all assigned to separate product classes. Livestock of different sexes are not property of a like kind, but exchanges of same-sex livestock have qualified as tax-free exchanges.

**LIKE-KIND EXCHANGE DEPRECIATION RULES**

IRS Notice 2000-4 requires that for property placed in service after January 2, 2000, the basis of the traded item continues to be depreciated over the remaining recovery period of the old property, using the same method and convention. Accumulated depreciation of the old asset would carry over and potentially be subject to recapture upon the sale of the newly acquired asset under I.R.C. §1245 depreciation recapture rules. Any additional cost basis would be treated as newly acquired property. This provision applies to all MACRS property, but taxpayers that did not calculate depreciation in accordance with this announcement prior to January 3, 2000, are not required to change depreciation calculations. If they wish to change prior depreciation calculations, the procedure described in the instructions for Form 3115 should be followed.

**Practitioner Note**

Temporary regulations under I.R.C. §168 issued on February 27, 2004, allow taxpayers to elect to not apply the principles of IRS Notice 2000-4 and go back to the prior procedure of combining the remaining basis of the traded item with the cash paid to boot and treating the asset as a single item on the depreciation schedule. The potential recapture under I.R.C. §1245 for the accumulated depreciation on the traded item still carries over to the newly acquired asset. The election is made by noting at the top of Form 4562 “Election Made Under Section 1.168(i)-6T(i).” The election is available on an asset-by-asset basis.

**Example 10.** Under rules *prior* to Notice 2000-4 (including the election to not follow this Notice under the temporary regulations),

- Farmer Pat paid $100,000 for a combine in 2003.
- Pat depreciated it as 7-year property using MACRS 150% declining balance.
- In 2006 Pat traded the combine and $40,000 cash for a tractor.
- Calculation of the basis in the new tractor is as shown in Figure 17.
Calculation of Pat’s total 2006 depreciation on these two assets is as shown in Figure 18.

Example 11. Under Notice 2000-4, which requires Pat to continue depreciating the carried-over basis over the remaining life of the combine, continuing with the same depreciation rate,

- Farmer Pat paid $100,000 for a combine in 2003.
- Pat depreciated it as 7-year property using MACRS 150% declining balance.
- In 2006 Pat traded the combine and $40,000 cash for a tractor.
- Calculation of the total 2006 depreciation on these two assets is as shown in Figure 19.

The result is a greater 1st-year depreciation for Pat than under pre-Notice 2000-4 rules ($16,534 versus $15,657). The advantage of this methodology is that, where the trade-in has not been depreciated to zero, the new method yields a faster recovery than would be available if the remaining basis was added to the basis of the new property and depreciated accordingly. Next year, if Pat trades that
new tractor in for a baler, Pat will have a 3-line calculation of depreciation but only one piece of equipment left on the farm.

Pat’s depreciation schedule will need some notes to keep track of what machinery is gone, what is remaining on the farm, and which was traded for which. Notice 2000-4 does not give any guidance in this area. Pat should keep the traded property on the depreciation schedule with a note as to which piece was traded for and the basis of the new equipment, which will be just the boot price. If Pat is a frequent trader, it may take several lines to support the depreciation and basis in the traded and acquired property. If Pat ultimately sells the piece of equipment, the remaining basis of all the traded items will be added to the basis of the item being sold to determine gain. The election under the temporary regulations starts to look attractive—even though it may result in less current depreciation expense!

**Other Like-Kind Exchange Rules and Requirements**

**IRS Form 8824** is used as a supporting statement for like-kind exchanges that either generate no taxable gain or are reported on other forms, including Form 4797 Sale of Business Property and Form 1040 Schedule D Capital Gains and Losses. A separate Form 8824 should be attached to Form 1040 for each exchange. Form 8824 should be filed for the tax year in which the seller (exchanger) transferred property to the other party in the exchange.

If the relinquished property is subject to depreciation recapture under I.R.C. §§1245, 1250, 1252, 1254, or 1255, part or all of the recapture may have to be recognized in the year of the like-kind exchange. Any recapture potential not recognized in the year of the exchange will carry over as an attribute of the asset received in the exchange.

Like-kind exchanges between related parties can result in recognition of gain if either party disposes of the property within 2 years after the exchange.

**Domestic Production Activities Deduction—I.R.C. §199**

The American Jobs Creation Act of 2004 added I.R.C. §199 as an incentive for businesses to hire U.S. workers to increase domestic production. I.R.C. §199 provides a deduction to businesses that manufacture, produce, grow, or extract property within the United States.

### Practitioner Note

This section highlights those portions of I.R.C. §199 most relevant to farm tax reporting. For further details, refer to T.D. 9263 for final Regulations released May 24, 2006. This replaced proposed Regulations released October 20, 2005.

In general the deduction is based on net income from qualifying production activities (QPAI). The deduction is 3% of QPAI for 2005 and 2006 (increasing to 6% in 2007, 2008, and 2009, and then to 9% for 2010 and thereafter). However, for individuals, the deduction is based on the lesser of AGI or QPAI taxable income and then limited to 50% of Form W-2 wages (both of which are discussed below). This deduction is available to sole proprietors, regular C corporations, and also to S corporation shareholders, partners, limited liability company members, and members of agricultural cooperatives.
Qualified Production Activity Income

In order to calculate QPAI, it is first necessary to define a qualifying activity. The general definition is that the activity must involve the manufacture, production, growth, or extraction of property within the United States. In addition to sales from such activities, the income from the following is includable:

1. The rental or lease of tangible personal property if the property was produced by the taxpayer in the United States. However, rental income from a related party does not qualify. For this purpose, related party includes the following:
   ◆ Members of an affiliated service group
   ◆ Corporations that are part of a controlled group
   ◆ Other trades or business under common control
2. The construction or substantial renovation of real property (buildings, roads, utilities)
3. Architectural and engineering services related to #2 above
4. The sale of natural gas produced by the taxpayer

Nonqualified receipts would include:

1. Any increase in the value of the property occurring by activities outside the United States. This amount must be subtracted in determining domestic gross receipts.
2. Resale activities except to the extent that the taxpayer has added value to the product by manufacture or production
3. Sales of food and beverages prepared by the taxpayer at a retail establishment
4. Any receipts from a nonqualified activity, which could include the following:
   ◆ Interest earned and finance charges on accounts receivable
   ◆ Services provided other than those in #3 in the above list of qualifying receipts
   ◆ Sale of tangible personal property not produced by the taxpayer, or produced outside the United States
   ◆ Lease or rental of real property, even if constructed by the taxpayer

Grain, fruit, vegetable, and livestock production clearly qualify as production activities. However, service activities often provided by farmers such as trucking and custom service (for example, plowing, spraying, combining) do not qualify. Receipts from the storage of agricultural commodities qualify provided that the taxpayer owns the commodity at the time it is stored. Government payments qualify to the extent that they are substitutes for gross receipts that would qualify. Patronage income from cooperatives does not qualify, but the cooperative may pass through to patrons QPAI that it generated (Form 1099 PATR).

For many farmers, QPAI will be the net income from Schedule F, Form 1040, plus any raised livestock sales reported on Form 4797. (Purchased livestock that are reported on Form 4797 would not appear to qualify since the taxpayer did not manufacture or grow them.) If nonqualifying receipts are 5% or more of total gross receipts, it will be necessary to allocate expenses as discussed later.

Query How will the Service classify the sale of cows that were purchased as calves, raised and held for milk production, and then culled from the milking herd?

The domestic production gross receipts (DPGR) from the qualifying activity are reduced by all related deductions and expenses plus a ratable portion of deductions not directly attributable to the qualifying activity (that is, overhead). It becomes essential that a taxpayer’s records be able to identify
expenses directly related to the qualified activity versus any nonqualifying activity. If cost of goods sold (COGS) cannot be directly identified, any reasonable method can be used to make the allocation. There is an exception for small businesses which allows COGS to be prorated based on qualifying gross receipts as a percentage of total gross receipts. A small business is defined as one having 3-year average annual gross receipts not exceeding $5 million or taxpayers permitted to use the cash method of accounting under Rev. Proc. 2002-28 (generally, where the principal business activity is not manufacturing). Indirect expenses may also be allocated by any reasonable method. In this case, if gross receipts of the taxpayer are $100 million or less, these indirect expenses may be prorated based on relative gross receipts. If the taxpayer maintains allocation records for another purpose, such as cost control or profit center management, the taxpayer must use these same allocations in calculating QPAI (unless such allocations are “unreasonable”).

**Practitioner Note**

> When inputs for production are imported, it is the greater of cost or value at the time of import which must be used as COGS.

**Practitioner Note**

> I.R.C. §199 provides a de minimis rule regarding allocations between qualified and nonqualified receipts which allows nonqualifying receipts to be included in the calculation of QPAI and exempts the taxpayer from any requirement to allocate expenses. The de minimis rule applies if the taxpayer’s nonqualifying receipts are less than 5% of total gross receipts.

**Form W-2 Wage Limit**

The qualified domestic production deduction is limited to 50% of the taxpayer’s qualifying wages. Rev. Proc. 2006-22 (2006-23 I.R.B. 1033) provides three alternatives for calculating wages from Form W-2 information. In all cases, only wages subject to FICA and federal income tax withholding are included. This means that agricultural wages paid in kind (commodities or other noncash compensation) do not qualify. Also, payments to partners or limited liability company members are not W-2 wages.

Form W-2 does not necessarily report wages that are consistent with the I.R.C. §199 definition of W-2 wages. Three alternatives are provided in Rev. Proc. 2006-22. Most farm taxpayers will use the unmodified box 1 method. In this method, the employer/taxpayer uses the lesser of the totals from either box 1 or box 2 of all Forms W-2. However, if wages result in limiting the I.R.C. §199 deduction, one of the alternate methods of calculating the wage limit should be considered, especially if the employees have made elective deferrals to retirement plans.

**Practitioner Note**

> Wages paid to employees of the taxpayer through an agent are eligible wages for computing the I.R.C. §199 deduction even though the Forms W-2 are issued from the agent.

**Law Change**

> The Tax Increase Prevention and Reconciliation Act of 2005 provides that for tax years beginning after May 17, 2006, only wages allocable to domestic production may be used for the 50% limitation.
**Taxable Income Limit**

For 2005 and 2006, the I.R.C. §199 deduction is limited to 3% of taxable income of a corporation and to 3% of the adjusted gross income of individuals, estates, and trusts (with the percentage increasing to 6% in 2007 and then to 9% after 2009).

**Claiming the Deduction**

Form 8903 is used to calculate the deduction. Individuals claim this deduction as an adjustment to gross income. Therefore the deduction does not reduce the taxpayer’s self-employment tax. C corporations claim this deduction on the “other deductions” line. Trusts are entitled to the I.R.C. §199 deduction if the income is not distributed to the beneficiaries.

Taxpayers may also receive QPAI and qualifying wage information from entities that do not pay taxes of their own—S corporations, partnerships, and limited liability companies. In addition, agricultural cooperatives may pass through this information to their patrons on Form 1099-PATR.

**Example 12.** Mr. Domestic Dairy, a sole proprietor, has a 2006 Form 1040 Schedule F net income of $39,000 and $1,000 of Form 4797 raised cull cow sales. Make the assumption that all of his income is qualified and the dairy farm paid and reported W-2 hired chore wages of $2,200. His wife had a W-2 income of $50,000 as a school principal. How much domestic production can they claim and how much will it save them in federal taxes?

Form 8903 applies the limits by first limiting QPAI to the taxpayer’s taxable income (or AGI for individuals, estates, and trusts). Taking 3% (for 2006) of the lesser of these two income measures provides the tentative I.R.C. §199 deduction. This tentative deduction is then limited to 50% of Form W-2 wages from all sources.

The restriction on W-2 wages passing through from such entities has been eliminated for tax years beginning after May 17, 2006.

Form 8903 compares the farm’s net income from qualified production activities ($39,000 + $1,000 = $40,000 QPAI), which is less than $90,000 AGI without the domestic production activities deduction (DPAD). Then the form multiplies the QPAI $40,000 times 3% for 2006, resulting in $1,200 for potential DPAD. Next compare this with 50% of Form W-2 wages ($2,200 × 50%) reported by the domestic production business, resulting in $1,100 in wage limitation. The smaller of the two calculations, or $1,100, is the domestic production activities deduction that goes on Form 1040 line 35. This deduction lowers AGI to $88,900 and saves $1,100 × 25% tax bracket, or $275 of federal income taxes. Note that DPAD does not reduce the taxpayer’s self-employment tax.
Alternative Minimum Tax

The I.R.C. §199 deduction is allowed in the calculation of the Alternative Minimum Tax (AMT). However, for regular C corporations, the taxable-income limitation is replaced with an alternative minimum taxable-income limitation when computing the deduction for AMT purposes.

DEPRECIATION AND COST RECOVERY

The Job Creation and Worker Assistance Act of 2002 made substantial changes to this area by allowing taxpayers to claim a 30% bonus depreciation on qualifying property placed in service under a binding contract after September 10, 2001. The Jobs and Growth Tax Relief Act of 2003 increased the bonus depreciation to 50% for purchases made under a binding contract after May 5, 2003, and placed in service prior to January 1, 2005. For assets placed in service after December 31, 2004, there is no bonus depreciation. The 2003 act also increased the I.R.C. §179 deduction. Other than the bonus depreciation and I.R.C. §179 deduction (both discussed later), and Notice 2000-4 and subsequent temporary regulations regarding like-kind exchanges (see the previous section), the standard depreciation rules for regular income tax have not changed. The AMT depreciation rules were modified in 1998 and will reduce the depreciation adjustment for 1999 and subsequent years. MACRS provides for eight classes of recovery property, two of which may be depreciated only with straight-line. MACRS applies to property placed in service after 1986. Pre-MACRS property continues to be depreciated under the ACRS or pre-ACRS rules. Most taxpayers will be using MACRS, ACRS, and the depreciation rules that apply to property acquired before 1981. This section concentrates on the MACRS rules, but some ACRS information is included. Additional information on ACRS and pre-ACRS rules can be found in the Farmer’s Tax Guide, IRS Pub. 225.

Depreciable Assets

A taxpayer is allowed cost recovery or depreciation on purchased machinery, equipment, and buildings and on purchased livestock acquired for dairy, breeding, draft, and sporting purposes. The taxpayer that owns the asset must claim depreciation. A taxpayer cannot depreciate property that he or she is renting or leasing from others. The costs of most capital improvements made to leased property may be depreciated by the owner of the leasehold improvements under the same rules that apply to owners of regular depreciable property. A lessor cannot depreciate improvements made by the lessee.

Depreciation or cost recovery is not optional. It should be claimed each year on all depreciable property, including temporarily idle assets. An owner who neglects to take depreciation when it is due has three opportunities to recover the lost depreciation. It may be recovered by filing an amended return in any of the following situations:

- An incorrect amount was claimed due to a mathematical error.
- An incorrect amount was claimed due to a posting error.
- A “method of accounting for the property” has not been adopted.

A method of accounting has been adopted if an incorrect amount of depreciation has been claimed on two or more consecutively filed tax returns for reasons other than a mathematical or posting error. In this case, Form 3115, Application for Change in Accounting Method, is filed to request a change in accounting method and to document the amount of adjustment being claimed on subsequently filed tax returns. Various Rev. Procs. have been issued (2002-9, 2002-19, 2002-33) to describe the process. If the
adjustment is negative (due to previously understated depreciation), it may be taken in total on the next tax return filed. If the adjustment is positive and exceeds $25,000, it is reported equally on the next 4 years’ returns. Form 3115 must be filed with the National Office of the IRS, and a signed copy must be attached to the taxpayer’s return for the tax year that the correction in depreciation is made. There is no fee for filing Form 3115 under these automatic approval procedures.

Expensing the purchase of small assets is not an option according to the Tax Court (T.C. Memo 2001-149). If the item has a useful life greater than 1 year, it is to be depreciated. The only exception stated is that if the aggregate total of all such items for the tax year is less than 1% of operating expenses and net income, the expense would be allowed.

MACRS Classes

The MACRS class life depends on the asset depreciation range (ADR) midpoint life of the property, as shown in Figure 20.

Assets are placed in one of the eight MACRS classes, regardless of the useful life of the property in the taxpayer’s business. Examples of the types of farm assets included in each MACRS class are shown in Figure 21.

</tr>
</tbody>
</table>

Three-Year Property

- I.R.C. §1245 property with an ADR class life of 4 years or less is 3-year property. This includes over-the-road tractors and hogs held for breeding purposes. It does not include cattle, goats, or sheep held for dairy or breeding purposes because the ADR class life of these animals is greater than 4 years.
- I.R.C. §1245 property is considered 3-year property if it is used in connection with research and experimentation. Few farmers will have this type of property.
- Race horses more than 2 years old when placed in service and all other horses more than 12 years old when placed in service are considered 3-year property.

Five-Year Property

- All purchased dairy and breeding livestock (except hogs and horses included in the 3- or 7-year classes)
- Automobiles, light trucks (under 13,000 lbs unladen), and heavy-duty trucks
Computers and peripheral equipment, typewriters, copiers, and adding machines
Logging machinery and equipment

7-year property
- All farm machinery and equipment
- Silos, grain storage bins, fences, and paved barnyards
- Breeding horses or workhorses (12 years old or younger)
- Office furniture

Ten-Year Property
- Single-purpose livestock and horticultural structures (7-year property if placed in service before 1989)
- Orchards and vineyards (15-year property if placed in service before 1989)

Fifteen-Year Property
- Depreciable land improvements such as sidewalks, roads, bridges, water wells, drainage facilities, and fences other than farm fences, which are in the 7-year class (does not include land improvements that are explicitly included in any other class, or buildings or structural components)
- Orchards, groves, and vineyards when they reach the production stage if they were placed in service before 1989

MACRS Classes 20 Years and Higher
- Twenty-year property includes farm buildings such as general-purpose barns, machine sheds, and many storage buildings.
- Property that is 27.5-year includes residential rental property.
- Property that is 39-year (31.5 if acquired before May 13, 1993) includes nonresidential real property.

</table>

\(^a\)If placed in service before 1989, recovery period is 7 years.
\(^b\)If placed in service before 1989, recovery period is 15 years.
\(^c\)If placed in service before May 13, 1993, recovery period is 31.5 years.
\(^d\)No class life specified; therefore, 12-year life assigned.
Accelerated cost recovery methods for MACRS property are shown in Figure 22. Depreciation on farm property placed in service after 1988 is limited to 150% declining balance (DB), rather than the 200% available for nonfarm property (both with crossover to straight-line). There are two straight-line (SL) options for the classes eligible for rapid recovery. The SL option may be taken over the MACRS class life or the MACRS alternative depreciation system (ADS) life. A fourth option is 150% DB over the ADR midpoint life. The changes in depreciation required for AMT purposes are discussed in this section under “AMT Depreciation” and in the “Alternative Minimum Tax” section.

Orchards and vineyards placed in service after 1988 are not eligible for rapid depreciation. They are in the 10-year class, and depreciation is limited to straight-line.

The MACRS law does not provide standard percentage recovery figures for each year. However, the IRS and several of the tax services have made tables available, such as Figure 23.
MACRS provides for a half-year convention in the year placed in service, regardless of the recovery option chosen (reflected in Figure 23). A half-year of recovery is taken in the year of disposal (not reflected in the table unless disposal is in the final year of the cost recovery period). No depreciation is allowed on property acquired and disposed of in the same year. Property in the 27.5-year and 39-year classes is subject to a mid-month convention in the year placed in service.

If more than 40% of the year’s depreciable assets (other than 27.5- and 39-year property) are placed in service in the last quarter, all of the assets placed in service during that year must be depreciated using a mid-quarter convention. Assets placed in service during the first, second, third, and fourth quarters will receive 87.5%, 62.5%, 37.5%, and 12.5% of the year’s depreciation, respectively. The amount expensed under I.R.C. §179 is not considered in applying the 40% rule. In other words, the amount

†The percentage is 5.90 in years 12 and 14, 5.91 in years 13 and 15.
expensed under I.R.C. §179 can be taken on property acquired in the last quarter, which may help avoid the mid-quarter convention rule (see Example 12 in the “Election to Expense Depreciable Property” section).

**MACRS Alternative Depreciation**

The MACRS ADS is required for some property and is an option for the rest. It is a straight-line system based on the alternative MACRS recovery period (ADR midpoint lives). Farmers who are subject to capitalization of preproductive expenses, discussed later, may elect to avoid capitalization; but if they do so, they must use the ADS life on all property. As noted later, any taxpayer required to use ADS is ineligible for bonus depreciation (which expired December 31, 2004) but may still use the I.R.C. §179 expense deduction.

**Election to Expense Depreciable Property**

The I.R.C. §179 expense deduction is $108,000 for 2006 and will be indexed again for inflation for 2007 through 2009 before reverting to the pre–2003 act level of $25,000 for 2010. The expense deduction is phased out dollar-for-dollar for any taxpayer that places over $430,000 (up from $420,000 in 2005) of property in service in any year, with a complete phaseout at $538,000. Eligible property is defined as I.R.C. §1245 property to which I.R.C. §168 (accelerated cost recovery) applies. In addition, off-the-shelf computer software is eligible property. Property must be used more than 50% of the time in the business to qualify. General-purpose buildings, property acquired from a related person, and certain property leased by noncorporate lessors do not qualify. Excluded is property used outside the United States, property used by tax-exempt organizations, property used with furnished lodging, property used by governments and foreigners, and air-conditioning and heating units. When property is acquired by trade, I.R.C. §179 deductions may not be claimed on the basis of the trade-in.

In the case of partnerships, the $108,000 limit applies to the partnership and also to each partner as an individual taxpayer. A partner who has I.R.C. §179 allocations from several sources could be in a situation where only $108,000 may be expensed because of the $108,000 limitation. Any allocations in excess of $108,000 are lost forever, which is a different result from the limitation discussed below. The same concept applies to allocated I.R.C. §179 deductions from S corporations.

The amount of the I.R.C. §179 expense deduction is limited to the amount of taxable income of the taxpayer that is derived from the active conduct of all trades or businesses of the taxpayer during the year. Taxable income for the purpose of this rule is computed excluding the I.R.C. §179 deduction. Any disallowed I.R.C. §179 deductions due to this taxable income limitation are carried forward to succeeding years. The deduction of current plus carryover amounts is then limited to the taxable business income of that carryover year.

I.R.C. §179 regulations provide that wage and salary income qualifies as income from a trade or business. Therefore, such income can be combined with income (or loss) from Form 1040 Schedules C or F in determining income from the “active conduct of a trade or business” when calculating the allowable deduction. I.R.C. §1231 gains and losses from a business actively conducted by the taxpayer, as well as ordinary gains and losses from business assets reported on Form 4797, are also included. Trade or business income includes the amount of such items flowing through to the taxpayer’s return from S corporations and partnerships.

Gains from the sale of I.R.C. §179 assets are treated like I.R.C. §1245 gains. The amounts expensed are recaptured as ordinary income in the year of sale. The I.R.C. §179 expense deduction is combined
with depreciation allowed in determining the amount of gain to report as ordinary income on Part III of Form 4797.

If property is converted to personal use or if business use drops to 50% or less, I.R.C. §179 expense recapture is invoked no matter how long the property was held for business use. The amount recaptured is the excess of the I.R.C. §179 deduction over the amount that would have been deducted as depreciation. The recapture is reported on Part IV of Form 4797 and then on Form 1040 Schedule F.

Every business owner who has purchased MACRS property should consider the I.R.C. §179 expense deduction. Note, however, that New York investment tax credit will be lost on the amount of an otherwise qualifying purchase that is expensed under I.R.C. §179. Consideration should first be given to taking the expense deduction on highway vehicles since these are ineligible for the credit. Generally, I.R.C. §179 should not be used to reduce AGI below standard (or itemized) deductions plus exemptions, unless an additional reduction in self-employment tax is worth more than depreciation in a future tax year. Also, the taxpayer must be sure not to use more I.R.C. §179 deduction than the amount of taxable income from the “active conduct of a trade or business.”

The Tax Increase Prevention Act extended the taxpayer’s ability to make or revoke an I.R.C. §179 expensing election on an amended return for tax years before 2010 and before 2008 without consent of the commissioner. (The 2003 act had made provisions for 2003 through 2007.)

**Example 13.** V. Sharp placed $188,000 worth of 7-year MACRS property in service. He could expense $108,000 and claim $8,568 of depreciation ($188,000 − $108,000 = $80,000 × 0.1071 = $8,568) under the half-year convention. If $138,000 of Sharp’s property was placed in service in the last quarter and the $108,000 I.R.C. §179 election is applied to this $138,000, $30,000 is left to be used in the 40% test. Thus, $30,000 ÷ ($188,000 − $108,000) = 0.375, which is less than 40%, so Sharp avoids the mid-quarter rules. However, if his depreciable items had totaled $181,000, and $138,000 was placed in service in the last quarter, he would be caught by the 40% rule, even if he applied the $108,000 I.R.C. §179 to the items placed in service in the last quarter. That is, $30,000 ÷ ($181,000 − $108,000) = 0.41, and all the depreciation items would be subject to the mid-quarter convention.

If the 40% rule is triggered, the depreciation on property acquired in the first and second quarters actually increases. Taxpayers are not allowed to use the mid-quarter rules voluntarily. However, choice of property to expense under I.R.C. §179 could work to the advantage of a taxpayer that wanted to become subject to the rules. If 3rd-quarter property could be expensed and thereby have the 40% rule triggered, the depreciation on 1st- and 2nd-quarter property would be increased. Whether this increases total depreciation for the year would depend on the proportion placed in service in each quarter.
For 3-, 5-, 7-, and 10-year MACRS property, the same recovery option must be used for all the property acquired in a given year that belongs in the same MACRS class.

**Example 14.** A farmer purchased a tractor, harvester, and combine in 2006. All belong in the 7-year property class. The farmer may not recover the tractor over 7 years with rapid recovery (150% DB) and the other items over 7 or 10 years with SL. However, a taxpayer may choose a different recovery option for property in the same MACRS class acquired in a subsequent year. For example, a farmer could have chosen SL 10-year recovery for equipment purchased in 2004 (7-year property) and 150% DB for 7 years for equipment purchased in 2005 and could now select SL 7-year recovery for all machinery purchased in 2006.

A taxpayer may select different recovery options for different MACRS classes established for the same year. For example, a taxpayer could select fast recovery on 5-year property, and SL over 7 years on 7-year property.

**Some Special Rules on Autos and Listed Property**

There are special rules for depreciation on vehicles and other listed property. If used less than 100% in the business, the maximum allowance is reduced, and if used 50% or less, the I.R.C. §179 deduction is not allowed and depreciation is limited to SL. The maximum depreciation and I.R.C. §179 expense allowance for 4-wheeled vehicles called luxury cars (6,000 lbs or less) placed in service in 2006 is $2,960 for the first year, $4,800 for the second year (up $100 from the 2005 limit), $2,850 for the third year, and $1,775 (up $100 from the 2005 limit) for each succeeding year (see Figure 24). If the business-use percentage is less than 100%, these limits are reduced accordingly. (Note that in 2001 through 2004 there were higher limits in the first year if bonus depreciation was used.) Sport-utility vehicles weighing more than 6,000 pounds but no more than 14,000 pounds are limited to a maximum I.R.C. §179 expense of $25,000 each. The balance of the cost is depreciable under MACRS rules without any further restrictions. Cellular telephones acquired after 1989 are listed property. Computers are listed property unless they are used only for business. Starting in the year 2003, pickups and vans have depreciation caps that are different from those of other automobiles, as shown in Figure 24.
For I.R.C. §1245 property placed in service after 1998, if the 200% DB MACRS method is used for regular tax purposes, depreciation must be recalculated for AMT purposes using 150% DB MACRS. The difference between regular depreciation and this redetermined amount is an income adjustment subject to inclusion in alternative minimum taxable income. For all other property placed in service after 1998, the depreciation method is the same for regular tax and AMT purposes. Therefore, farm property placed in service after 1998 is depreciated using the same method for AMT purposes. (Note: There could still be an AMT adjustment on such property if it was acquired using a trade-in that has a different basis for AMT purposes due to prior-year AMT depreciation rules discussed later.) An adjustment remains for nonfarm property depreciated using 200% DB MACRS as well as for other property placed in service prior to 1999.

For I.R.C. §1245 property placed in service after 1986 and before 1999, depreciation must be recalculated for AMT purposes by using Figure 25.
The AMT depreciation adjustment for I.R.C. §1250 property placed in service after 1986 and before 1999 is the difference between what was claimed for regular income tax and what was allowed under MACRS ADS SL depreciation.

**Bonus Depreciation**

Bonus depreciation is not available on any item placed in service after December 31, 2004. The following discussion is provided in the event that this mandatory depreciation was not claimed and the taxpayer did not “elect out.” In such a case, it would be necessary to file an amended return or Form 3115 to claim additional depreciation.

As a result of the Job Creation and Worker Assistance Act of 2002, there was an opportunity to claim a front-end additional depreciation deduction (equal to 30% of original cost) on any new asset placed in service on or after September 11, 2001. This is being referred to as the bonus depreciation. The 2003 act provides a 50% bonus depreciation for similarly qualified property placed in service after May 5, 2003, but before December 31, 2004. This special depreciation allowance is in addition to the I.R.C. §179 direct-expense deduction.

**Qualified Property**

The following qualifications are used to determine whether assets are eligible for bonus depreciation:

- Under regulations issued September 5, 2003, the total cost (including adjusted basis of any traded item) is eligible for this bonus depreciation.
- The asset has a depreciable life of 20 years or less.
- The original use of the asset must commence with the taxpayer. (See additional details under the “What Constitutes New?” section.)
- The property must be used over 50% for the business.

**What Constitutes New?**

For equipment and buildings, the determination is not too difficult. There is the issue of reconditioned or rebuilt property—it is considered used property and therefore ineligible. However, if the taxpayer makes capital improvements to existing property (that is, does the reconditioning), those capital improvement expenditures are eligible for bonus depreciation.

What about cattle? If the animal has been used for its dairy or breeding purpose, it is no longer new. Thus, milk cows purchased from another farmer’s herd would not qualify, but the purchase of heifers from one in the business of raising dairy replacements would qualify.

**Mandatory Use or Election Out**

The use of bonus depreciation is mandatory on eligible purchases. If not claimed, basis will still be reduced under the allowed or allowable rules. The taxpayer was allowed to elect out of the use of bonus depreciation on qualifying purchases. The taxpayer was also able to elect out of 50% bonus depreciation and claim 30%. However, the time has run out for a taxpayer to elect out of using bonus depreciation unless approval of the commissioner is obtained.

**Impact of Use of ADS Depreciation**

If the taxpayer is a fruit grower or vineyardist who is required to use ADS depreciation because they have elected out of the uniform capitalization rule (discussed in a later section), they are ineligible for
the bonus depreciation. However, if a taxpayer simply elects to use ADS to stretch the useful life (rather than being required to do so), he or she could still claim bonus depreciation on otherwise qualifying property.

**Luxury Car Limits Modified**

To accommodate 50% bonus depreciation on eligible lightweight vehicles, the amount of first-year depreciation allowed on passenger vehicles was increased (you must prorate for business-use percentage; see Figure 24). However, this increased limit was only available if bonus depreciation was used. The higher limits continue to apply even if the taxpayer elects 30% bonus depreciation (starting May 6, 2003).

**Interaction with I.R.C. §179**

Bonus depreciation is in addition to the I.R.C. §179 deduction on qualifying property. I.R.C. §179 is deducted first, and then the remaining basis is eligible for bonus depreciation.

**Alternative Minimum Tax**

Bonus depreciation was also allowed in the calculation of alternative minimum taxable income (AMTI), so there will be no additional depreciation adjustment for AMT as a result of using bonus depreciation.

**Additional Depreciation Rules**

MACRS rules allow half a year’s depreciation in the year of disposition if using the half-year convention. If the mid-quarter convention applies, depreciation is allowed for the quarters held in the year of disposition. For 27.5- and 39-year property, depreciation is claimed in the year of disposition based on the months held in that year. The depreciation tables reflect the full year’s depreciation except in the final year of the recovery period. Therefore it is necessary to manually adjust the table amount of depreciation for the months the asset was actually held. An asset under the mid-quarter convention sold in May will receive only 4.5 months of depreciation in the year of disposition.

When assets are sold, gain to the extent of all prior depreciation on all I.R.C. §1245, as well as on 3-, 5-, 7-, 10-, and 15-year MACRS property, is ordinary income. There is no recapture of depreciation on property in the 20-year class if SL recovery is used (see the section “A Review of Farm Business Property Sales”).

Property placed in service during a short tax year is subject to special allocation rules that vary with the applicable convention used. Details are provided in IRS Pub. 946, *How to Depreciate Property*.

**Choosing Recovery Options**

Taxpayers will maximize after-tax income by using I.R.C. §179 and rapid recovery on 3-, 5-, 7-, 10-, and 15-year MACRS property, assuming the deductions can be used to reduce taxable income and do not create an AMT adjustment that results in AMT liability. The taxpayer that will not be able to use all the deductions in the early years may want to consider one of the SL options. A taxpayer in a low tax bracket may wish to forgo the I.R.C. §179 deduction to save tax deductions for future years if higher tax brackets are expected. Also, the loss of NYS investment tax credit (ITC) on any amount expensed under I.R.C. §179 should be considered.
Using SL rather than 150% DB on 20-year property will preserve capital gain treatment (at a 25% maximum rate) at the time of disposal because the amount of depreciation in excess of SL is treated as ordinary income at the time such I.R.C. §1250 property is sold. However, the tax savings will not be realized until many years from now, and if the asset is fully depreciated at the time of sale, there is no excess depreciation to be recaptured as ordinary income. For most taxpayers, the choice of the best recovery option for 20-year MACRS property should be based on the value of concentrating depreciation in early years versus spreading it out—that is, using 150% DB MACRS. The time value of money makes current-year depreciation more valuable than that used in later years. However, depreciation claimed to reduce taxable income below zero is wasted.

**Reporting Depreciation and Cost Recovery**

Form 4562 is used to report the I.R.C. §179 expense election, depreciation of recovery property, depreciation of nonrecovery property, amortization, and specific information concerning automobiles and other listed property. Depreciation, cost recovery, and I.R.C. §179 expenses are combined on Form 4562 and entered on Form 1040 Schedule F. However, partnerships and S corporations will transfer the I.R.C. §179 expense election to Schedule K (Form 1065 or 1120S), rather than combining it with other items on Form 4562. Furthermore, I.R.C. §179 is excluded when calculating net earnings for self-employment at the partnership level on Schedules K and K-1. Therefore, I.R.C. §179 must be included as an adjustment on the partner’s Form 1040 Schedule SE if the partner meets the test for the I.R.C. §179 deduction to be taken (that is, business income limitation and overall $108,000 limit).

**Uniform Capitalization Rules for Fruit Growers and Nurserymen**

Plants subject to uniform capitalization rules include fruit trees, vines, ornamental trees and shrubs, and sod, providing the preproductive period is 24 months or more. The preproductive period begins when the plant or seed is first planted or acquired by the taxpayer. It ends when the plant becomes productive in marketable quantities or when the plant is reasonably expected to be sold or otherwise disposed of. An evergreen tree that is more than 6 years old when harvested (severed from the roots) is not an ornamental tree subject to capitalization rules. Timber is also exempt. If trees and vines bearing edible crops for human consumption are lost or damaged by natural causes, the nondepreciable costs of replacing trees and vines do not have to be capitalized.

In Notice 2000-45, the IRS has now provided the following list of commercially grown plants with nationwide weighted-average preproductive periods in excess of 2 years: almonds, apples, apricots, avocados, blackberries, blueberries, cherries, chestnuts, coffee beans, currants, dates, figs, grapefruit, grapes, guavas, kiwifruit, kumquats, lemons, limes, macadamia nuts, mangoes, nectarines, olives, oranges, papayas, peaches, pears, pecans, persimmons, pistachio nuts, plums, pomegranates, prunes, raspberries, tangelos, tangerines, tangors, and walnuts. This is not an all-inclusive list. For other plants grown in commercial quantities in the United States, the nationwide weighted-average preproductive period must be determined based on available statistical data.

Fruit growers who choose to capitalize will need to establish reasonable estimates of the preproductive costs of trees and vines. Nurserymen could use the farm-price method to establish their preproductive costs of growing trees, vines, and ornamentals. Capitalization requires the recovery of orchard, vineyard, and ornamental tree preproductive period expenses over 10 years, SL.
If growers elect not to capitalize, they must use ADS to recover the costs of trees and vines (20-year SL) and all other depreciable assets placed in service. Only the preproductive period growing costs may be expensed.

Accurate Records Needed

Accurate and complete depreciation records are basic to reliable farm income tax reporting and good tax management. Depreciation and cost recovery must be reported on Form 4562. A complete depreciation and cost recovery record is needed to supplement Form 4562. It is not necessary to file the complete list of items included in the taxpayer’s depreciation and cost recovery schedules.

GENERAL BUSINESS CREDIT

The general business credit (GBC) is a combination of investment tax credit, work opportunity credit, welfare-to-work credit, research credit, low-income housing credit, disabled access credit, and others (see the following page). Form 3800 is used to claim the credit for the current year, to apply carryforward from prior years, and to claim carryback from later years. The credit allowable cannot reduce regular tax below tentative AMT. It is also limited to $25,000 plus 75% of net regular tax liability above $25,000. Special limits apply to married persons filing separate returns, controlled corporate groups, estates and trusts, and certain investment companies and institutions. The Taxpayer Relief Act of 1997 (TRA 97) changed the carryback period to 1 year and the carryforward period to 20 years, beginning in 1998. The 3-year carryback and 15-year carryforward rules remain for all credits earned before 1998.

Review of Federal Investment Credit

Federal ITC was repealed for most property placed in service after December 31, 1985. The ITC may still be earned on rehabilitated buildings, qualified reforestation expenses, and certain business energy investments. ITC is 10% of the amount of qualified investment, with more liberal allowances for some rehabilitated historic buildings. The ITC is a direct reduction against income tax liability. If it cannot be used in the year it is earned, it can be carried back and carried forward to offset tax liability in other years.

If property is disposed of before the ITC claimed is fully earned, the credit must be recomputed to determine the amount to recapture. Recapture rules apply when there is early disposition of rehabilitated buildings, business energy property, or reforested land for which investment credit has been claimed. The amount of recapture is 100% during the first year of service and declines to zero after 5 full years of service. Form 3468 is used for computing ITC; Form 4255 is used to recapture ITC.

Rehabilitated Buildings

The rehabilitated buildings (expenditures) credit is 10% for a qualified rehabilitated building and 20% for a certified historic structure. The building (other than a certified historic structure) must have been first placed in service before 1936. Expenditures for the interior or exterior renovation, restoration, or reconstruction of the building qualify for the credit. Costs for acquiring or completing a building, or for the replacement or enlargement of a building, do not qualify. The credit is available for all types of
buildings that are used in a business. Buildings that are used for residential purposes qualify only if they are certified historic structures that are used for residential purposes. The use of a building is determined based on its use when placed in service after rehabilitation. Thus, rehabilitation of an apartment building for use as an office building would render the expenditure eligible for credit. The basis for depreciation must be reduced by 100% of the investment credit claimed. Expenditures must exceed the greater of the adjusted basis of the property or $5,000. Qualifying investment is reduced by any I.R.C. §179 expense claimed on the building.

Gasification

A 20% credit is provided for projects that convert coal, petroleum residue, biomass (except recyclable paper), or other material into gas. Certification by the Department of Energy and approval by the IRS are required. Any credit claimed reduces the depreciable basis of the property.

Energy

Business energy investment credit is equal to 10% of the basis of qualified microturbine property and geothermal energy equipment placed in service during the tax year. A 30% credit applies to qualified fuel-cell property, equipment that illuminates the interior of a structure using fiber-optic distributed sunlight, or equipment that provides solar-process heat or uses solar energy to generate electricity, provide hot water, or heat or cool a structure. The basis of any qualifying equipment must be reduced by 50% of ITC claimed.

Other General Business Credits (GBCs)

Tax Credit for Child-Care Expenses Provided by Businesses for Employees’ Children

Business taxpayers may receive a credit equal to 25% of qualified expenses for employee child care plus 10% of child-care referral and resource services, up to a maximum of $150,000 credit per year. Employer’s expenditures are deductible as ordinary and necessary business expenses. Qualified child-care expenses include costs to acquire, build, rehabilitate, or expand nonprincipal residence (within meaning of I.R.C. §121) depreciable property. The fact that a child-care facility is in a residence will not prevent it from being qualified if it meets all the other requirements in I.R.C. §45F. To be qualified, the facility must meet open enrollment, nondiscrimination, and other regulations contained in I.R.C. §45F, as well as applicable state and local laws. Credits taken for costs of building, purchasing, or rehabilitating a facility are subject to recapture for the first 10 years after it is placed in service. The basis of the facility or the deduction for expenses must be reduced by the credit claimed.

Pension Plan Credit for Start-up Costs for Small Businesses

Any small business that sets up a new qualified defined-benefit or defined-contribution plan may receive a nonrefundable income tax credit for 50% of the first $1,000 in administrative and retirement education costs. Eligible plans would also include an I.R.C. §401(k) plan, SIMPLE plan, or SEP plan. A small business is one that employed, in the preceding year, 100 or fewer employees with compensation of at least $5,000. Credit is for only the first 3 plan years and must include at least one non–highly compensated employee. Although part of the GBC, any unused credit may not be carried back to years prior to 2002.
Work Opportunity Credit

The work opportunity credit (which now applies to qualifying individuals who start to work no later than December 31, 2005) is available to employers on first-year employee wages paid (Form 5884). First-year wages paid to targeted group employees with 120 to 400 hours of service earn 25% credit. The credit increases to 40% when an eligible employee reaches or exceeds 400 hours. There are nine targeted groups, including individuals displaced by Hurricane Katrina, qualified SSI recipients, recipients of aid to families with dependent children (IV-A recipients), certain food stamp recipients, high-risk youth living in empowerment zones, economically disadvantaged ex-felons, and certain disabled workers and veterans. Qualification rules were modified for IV-A recipients and veterans. Wages paid during 2006 to employees hired in 2005 still qualify for this credit. In addition, pending legislation would extend this credit through 2007.

Welfare-to-Work Credit

The welfare-to-work credit (Form 8861) is available to employers on qualified wages paid to long-term family assistance recipients who start to work no later than December 31, 2005. The credit is 35% on qualified first-year wages and 50% on qualified second-year wages. The credit applies to the first $10,000 of an eligible employee’s wages each year for a maximum credit of $8,500 over 2 years. Wages include the value of benefits, health insurance benefits, and employer contributions, including educational assistance and dependent-care expenses.

In general, to qualify as long-term family assistance recipients, members of a family must have been receiving family assistance for at least 18 months before the hiring date. The recipient must be certified by a designated local agency as being a member of a family receiving assistance under an IV-A program. Employers cannot get work opportunity credit and welfare-to-work credit on the same employee.

Credit for Increased Research Expenditures

The credit for increased research expenditures (formerly the research and development credit) has an extension to December 31, 2005 (pending change to 2007), and amounts to 20% of qualified research expenditures. This credit is claimed on Form 6765.

Disabled Access Credit

The disabled access credit may be claimed on Form 8826 by an eligible small business that incurs expenses for providing access to persons with disabilities. The credit is 50% of eligible expenses that exceed $250 but do not exceed $10,250. An eligible business is one that for the preceding year did not have more than 30 full-time employees or did not have more than $1 million in gross receipts. An employee is considered full-time if employed at least 30 hours per week for 20 or more calendar weeks in the tax year.

Miscellaneous Credits

Other GBCs include those for new markets tax, low-income housing, alcohol fuels, enhanced oil recovery, renewable electricity production, empowerment zones, American Indian employment, and employer FICA tax on tips.
Because farm taxpayers are affected by preferential capital gains tax rates, income averaging, and the complexities of installment sale reporting rules, tax planning for farm property sales has increased in importance. The first step in tax planning is making the distinction among gains from sales of property used in the farm business that are eligible for capital gains treatment, gains subject to recapture of depreciation, and Form 1040 Schedule F income.

**IRS Property Classifications**

The reporting of gains and losses on the disposition of property held for use in the farm business continues to be a complicated, but important, phase of farm tax reporting. Form 4797 must be used to report gains and losses on sales of farm business property. Form 1040 Schedule D is used to accumulate capital gains and losses. The treatment of gains and losses on disposition of property used in the farm business can be better understood after a review of the IRS classifications for such property.

**I.R.C. §1231 Property**

I.R.C. §1231 includes gains and losses on the sale or exchange of business assets meeting a holding-period requirement. (See the discussion later explaining that livestock must be held for dairy, breeding, sport, or draft to qualify as I.R.C. §1231 property.) The required holding period is 24 months for cattle and horses and 12 months for all other business assets, including unharvested crops sold with farmland that was held at least 1 year. There are instances, however, when gain on livestock, equipment, land, buildings, and other improvements is treated specifically under I.R.C. §§1245, 1250, 1252, and 1255 (resulting in a portion of these gains being treated as ordinary income).

Under I.R.C. §1231, net gains are treated as long-term capital gains, but net losses are fully deductible ordinary losses.

**Practitioner Note**

Net I.R.C. §1231 gains are treated as ordinary income to the extent of unrecovered net I.R.C. §1231 losses for the 5 most recent prior years. A taxpayer that claimed a net I.R.C. §1231 loss on the 2002, 2003, 2004, or 2005 return and has a net I.R.C. §1231 gain for 2006 must recapture the losses on the 2006 return (if they have not already been used against I.R.C. §1231 gains in earlier years). Losses are to be recaptured in the order in which they occurred. Any current-year I.R.C. §1231 gains in excess of these prior-year losses would still receive long-term capital gains treatment. Total gain is unaffected—this provision simply converts gain from capital gain to ordinary income.

**I.R.C. §1245 Property**

I.R.C. §1245 is one of the depreciation recapture sections. Farm machinery and purchased dairy, breeding, sport, and draft livestock held for the required period and sold at a gain are reported under this section. Gain will be ordinary income to the extent of depreciation and I.R.C. §179 expense deductions. Gain to the extent of depreciation claimed on capitalized preproduction costs is also reported here. Even if a taxpayer elects out of uniform capitalization rules (UCR) and instead uses the ADS method of depreciation, the preproduction costs that would have otherwise been capitalized must be recaptured as ordinary income.

recovery (regular ACRS) has been used. Other tangible real property, including silos, storage structures, fences, paved barnyards, orchards, and vineyards, is I.R.C. §1245 property.

**I.R.C. §1250 Property**

Farm buildings and other depreciable real property held over 1 year and sold at a gain are reported in I.R.C. §1250 unless the assets are I.R.C. §1245 property. If a method other than SL depreciation was used, the gain to the extent of depreciation claimed after 1969 that exceeds what would have been allowed under SL depreciation is recaptured as ordinary income. No recapture takes place when only SL depreciation has been used. A taxpayer may shift such real property to SL depreciation without special consent. In addition, gain to the extent of SL depreciation on I.R.C. §1250 assets sold after May 6, 1997, is called unrecaptured I.R.C. §1250 gain and is taxed at a maximum rate of 25%.

General-purpose farm buildings (including a house provided rent-free to employees) placed in service after 1986 are MACRS 20-year property eligible for 150% DB depreciation. Depreciation claimed that exceeds SL must be recaptured as ordinary income when the buildings are sold. A different MACRS option may be used on a substantial improvement to the original building. If fast recovery has been used on either the building or a substantial improvement to it, gain will be recaptured on the entire building to the extent of fast recovery. Any remaining gain will be capital gain. For residential rental real estate, gain will be recaptured only to the extent that fast-recovery deductions exceed SL on ACRS 15-, 18-, and 19-year property.

**Example 15.** A general-purpose farm building was purchased in 2004 for $20,000. Regular MACRS was used until the building was sold for $23,000 in 2006. Accumulated depreciation totaled $2,861. Total gain was therefore $5,861, as shown in Figure 26. SL depreciation would have been $2,000, so an excess depreciation of $861 would be recaptured as ordinary income. The gain from SL depreciation would be taxed at a maximum rate of 25%. The $3,000 of gain resulting from the sale price exceeding the original cost would be subject to long-term capital gains rates (5% or 15%).

**FIGURE 26. Calculation of Total Gain and Tax on Gain**

<table>
<thead>
<tr>
<th>Purchase price</th>
<th>$20,000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Selling price</td>
<td>23,000</td>
</tr>
<tr>
<td>Basis ($2,861 accumulated depreciation)</td>
<td>17,139</td>
</tr>
<tr>
<td>Gain</td>
<td>5,861</td>
</tr>
</tbody>
</table>

**Tax on Gain**

| SL depreciation (taxed at maximum rate of 25%) | 2,000 |
| Excess depreciation (recaptured at ordinary income rates) | 861   |
| Sales price in excess of cost (taxed at long-term capital gains rates) | 3,000 |
| **$ 5,861** |

Note that for corporations, I.R.C. §291(a) increases the ordinary income recapture by 20% of the additional amount that would be treated as ordinary income if the property were subject to the recapture rules for I.R.C. §1245 property. Although corporations do not receive reduced tax rates on capital gain, this provision may impact the tax consequences of an installment sale of I.R.C. §1250 property by a corporation.
I.R.C. §1252 Property

Gain on the sale of land held less than 10 years will be part ordinary and part capital gain when soil and water conservation expenditures have been expensed. If the land was held 5 years or less, all soil and water or land-clearing expenses taken will be recaptured as ordinary gain. If the land was held more than 5 years and less than 10, part of the soil and water expenses will be recaptured. The percentages of soil and water conservation expenses subject to recapture during this time period are as follows: sixth year after acquisition of the land, 80%; seventh year, 60%; eighth year, 40%; and ninth year, 20%. Figure 27 gives an illustration.

**FIGURE 27. Example of Recaptured Gain**

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cost of farmland acquired April 1, 2000</td>
<td>$100,000</td>
</tr>
<tr>
<td>Soil and water expenses deducted on 2001 tax return</td>
<td>$8,000</td>
</tr>
<tr>
<td>Price land was sold for on May 15, 2006</td>
<td>$130,000</td>
</tr>
</tbody>
</table>

During the time the land was owned, no capital improvements were made other than the soil and water expenses, so the adjusted tax basis at time of sale was $100,000. The gain of $30,000 would normally be all capital gain. The land was held for 6 years, so 80% of the soil and water conservation expenses ($8,000 × 0.80 = $6,400) must be recaptured as ordinary gain. The balance of the gain ($30,000 − $6,400 = $23,600) qualifies for capital gains treatment.

I.R.C. §1255 Property

If government cost-sharing payments for conservation have been excluded from gross income under the provisions of I.R.C. §126, the land improved with the payments will come under I.R.C. §1255 when sold. All the excluded income will be recaptured as ordinary income if the land has been held less than 10 years after the last government payment had been excluded. Between 10 and 20 years, the recapture is reduced 10% for each additional year the land is held. There is no recapture after 20 years.

**Use of Form 4797 and Form 1040 Schedule D by Farmers**

All sales of farm business properties are reported on Form 4797 to separate I.R.C. §1231 gain and loss from ordinary gain and loss. Casualty and theft gains and losses are reported on Form 4684 and transferred to Form 4797. Part III is used to apply the recapture provisions to any business asset held the required holding period and sold at a gain. The ordinary gain is transferred to Part II. The remaining capital gain is transferred to Part I, where it is combined with other I.R.C §1231 gains and losses.

If the I.R.C §1231 gains and losses reported on Form 4797 result in a net gain, net I.R.C. §1231 losses reported in the prior 5 years must be recaptured as ordinary income by transferring I.R.C. §1231 gain equal to the nonrecaptured losses to Part II. Any remaining gain is transferred to Form 1040 Schedule D and combined with capital gain or loss, if any, from disposition of capital assets. If the I.R.C. §1231 items result in a net loss, the loss is combined with ordinary gains and losses on Form 4797 Part II and then transferred to Form 1040.
Livestock Sales

The majority of livestock sales from Northeast farms are animals that have been held for dairy, breeding, or sporting purposes. Income from such sales is always reported on Form 4797. Dairy cows culled from the herd and cows held for dairy or breeding purposes are the most common of these sales. Sales of horses and other livestock held for breeding, draft, or sporting purposes also go on Form 4797.

Income from livestock held primarily for sale is reported on Form 1040 Schedule F. Receipts from the sale of “bob” veal calves, feeder livestock, slaughter livestock, and dairy heifers raised for sale are entered on Form 1040 Schedule F, line 4. Sales of livestock purchased for resale are entered on line 1 of Form 1040 Schedule F and, for a cash-basis farmer, the purchase price is recovered in the year of sale on line 2. The intent of holding livestock is a key issue in determining whether sales should be reported on Form 4797 or Form 1040 Schedule F.

Dairy, Breeding, Sport, or Draft Livestock

Dairy cattle raised or purchased to replace or add to the taxpayer’s herd are held for dairy purposes. Dairy cattle that are raised or purchased and developed as breeding stock to be sold to other farmers are held for sale. Livestock held for dairy, breeding, sport, or draft purposes are classified into 2 groups according to length of holding periods:

1. **Cattle and horses held 2 years or more, and other breeding livestock held 1 year or more.** Animals in this group are I.R.C. §1231 livestock. Emus and ostriches are currently excluded from the IRS definition of I.R.C. §1231, but alpacas would qualify if held for breeding purposes.

2. **Cattle and horses held less than 2 years and other breeding livestock held less than 1 year.** These sales do not meet holding-period requirements.

Most dairy animals will meet the 2-year holding period requirement. Major exceptions are raised young stock sold with a herd dispersal and the sale of cows that were purchased less than 2 years prior to sale. The age of raised animals sold will determine the length of the holding period. The date of purchase is needed to determine how long purchased animals are held. The holding period begins the day after the animal is born or purchased and ends on the date of disposition.

Reporting Sales of I.R.C. §1231 Livestock

Sales of I.R.C. §1231 livestock are entered in Part I or Part III of Form 4797. Because Part III is for recapture, purchased I.R.C. §1231 livestock that produce a gain when sold are to be entered in Part III, where they are taxed as I.R.C. §1245 property. Sales of raised I.R.C. §1231 livestock that are held for dairy, breeding, sport, or draft purposes are entered in Part I. All purchased I.R.C. §1231 livestock (held the required holding period) that result in a loss when sold are also entered in Part I.
Dairy, breeding, sport, or draft livestock that are *not held for the required period*, whether sold for a gain or loss, will be entered in Part II of Form 4797. This will include raised cattle that are held for dairy or breeding but sold before they reach 2 years of age and purchased cattle held for dairy or breeding but held for less than 2 years. Tax forms for reporting common farm business property sales are shown in Figure 28.

**Gifts and Below-Market Sales**

If a taxpayer sells an asset at below market value, they in essence have a sale and a gift. A taxpayer should always determine FMV and file the appropriate income and/or gift tax returns. If an individual sells to a family member and the value may be questioned, or discounts were used to arrive at the value of the gift or sale, they should file a gift tax return. This is true even if the amount of the gift is below the 2006 annual gift tax exclusion of $12,000 per person. This filing is important because it starts the statute of limitations running. If a gift tax return (with adequate disclosure) is filed, the IRS has only 3 years to challenge the value of the gift. If the taxpayer does not disclose certain gifts in a manner to apprise the IRS of the nature and amount of the gift, the period of limitations is held open indefinitely, and the gift amount may even be added back into an estate tax calculation.
The installment method of reporting may be used by taxpayers (who are nondealers) for the sale of real property or personal property (except for the gain caused by depreciation or other ordinary income recapture). Installment sales continue to be a practical and useful method used in transferring farms to the next generation. The installment method is required when qualified property is sold and at least one payment is received in the following tax year, unless the seller elects to report all the sale proceeds in the year of disposition. This election is made by simply reporting the total proceeds in the year of sale.

Taxable income from installment sales is computed by multiplying the amount of principal received in any year by the gross profit ratio. The gross profit ratio is gross profit (selling price minus the total of adjusted tax basis, expenses of sale, and recapture gains ineligible for installment reporting) divided by contract price (selling price minus mortgage assumed by buyer, plus any mortgage assumed in excess of adjusted tax basis). Form 6252 is used to report installment sales income. Interest must be charged on the outstanding balance at the published applicable federal rate (AFR), or higher; otherwise, it will be imputed by the IRS. IRS Pub. 225 contains a chapter on installment sales.

Recaptured depreciation does not qualify for installment sale reporting. That portion of the gain attributed to recaptured depreciation of I.R.C. §§1245 and 1250 property (or ordinary income recapture under I.R.C. §§1252 or 1255) must be excluded from installment sale reporting. I.R.C. §179 expenses are also subject to I.R.C. §1245 recapture. The full amount of recapture is reported as ordinary income in the year of sale regardless of when the payments are received.

Example 16. Frank Farmer sells his raised dairy cows, machinery, and equipment to his son Hank for $180,000. The cows are valued at $80,000, and the machinery is valued at $100,000. Hank will pay $30,000 down and $30,000 plus interest for 5 years. Frank’s machinery and equipment has an adjusted basis of $45,000; its original basis was $125,000. The raised cows have zero basis. Frank’s gain on the sale of machinery and equipment is $55,000 ($100,000 - $45,000). The full $55,000 is recaptured depreciation because prior depreciation, $80,000, is greater. Frank must report $55,000 received from machinery in the year of sale. He will report the $80,000 cattle sales gain using the installment method.

When the sale of I.R.C. §§1245 and 1250 property produces gain in addition to the amount recaptured, the amount of recaptured depreciation reported in the year of sale is added to the property’s basis to compute the correct gross profit ratio. This adjustment must be made to avoid double taxation of the recapture amount as payments are received.
of federal income taxes. The 2-year period will be extended if the original purchaser’s risk of loss was lessened by holding an option of another person to buy the property.

The resale rule will not apply if the second sale is also an installment sale where payments extend to or beyond the original installment sale payments. Also exempt from the resale rule are dispositions (1) after the death of either the installment seller or buyer, (2) resulting from involuntary conversions of the property (if initial sale occurred before threat or imminence), and (3) nonliquidating sales of stock to an issuing corporation.

An additional resale rule prevents the use of the installment method for sales of depreciable property between a taxpayer and his or her partnership or corporation (50% ownership), and a taxpayer and a trust of which he or she (or spouse) is a beneficiary. All payments from such a sale must be reported as received in the first year, and all gains are ordinary income [I.R.C. §§453(g) and 1239].

**AMT Issues**

Farmers may use the installment method of accounting for AMTI from the disposition of property used or produced in farming. However, other individuals who regularly sell tangible personal property are not able to use the installment method to report income from sales in tax years beginning after August 5, 1998.

**General Rules**

Losses cannot be reported on an installment sale. A partnership may use the installment sale method of reporting gain on the sale of partnership property.

The capital gains rules in effect at the time an installment payment is received and reported determine how the gain is taxed. However, a change in the capital gain holding-period requirement after the year of sale would not change a long-term gain to a short-term gain or vice versa.

A sale or exchange of an installment sale contract results in a gain or a loss. The gain or loss is the difference between the amount realized and the basis of the contract. The amount realized is the amount received by the seller, including FMV of property received instead of cash. The basis of the contract is the same as the remaining basis of the underlying property.

A cancellation of all or part of an installment obligation is treated like a sale or other disposition of the obligation, except that gain or loss is calculated as the difference between the FMV and the basis of the obligation if the parties are unrelated [I.R.C. §§453B(f)(1) and 453B(a)(2)]. With related parties the remaining balance of the installment obligation is its deemed sales price.

**Unstated and Imputed Interest Rules**

If the installment sale contract interest rate does not provide at least the AFR, part of the principal payment must be treated as interest income by the seller and as an interest deduction by the buyer. The amount of interest that must be recognized is called imputed interest. The imputed interest rule applies even if the seller elects out of the installment method or has a loss on the sale. When recharacterization of the loan is required, the seller’s interest income increases and capital gain decreases. See Figure 29 for a list of recent AFRs, based on length of term.

Imputed interest rules applicable to certain debt instruments, including installment sales, are covered under I.R.C. §§1274 and 483. There are several special rules and numerous exceptions that complicate the understanding and application of imputed interest rules. Of special interest are the following:
1. All sales and exchanges in which the seller financing does not exceed $4,483,000 (in 2005, indexed thereafter) must have an interest rate of the lesser of 100% of the AFR or 9% (compounded semiannually). Sales in excess of this amount do not have the 9% rate cap.

2. All sale-leaseback transactions are subject to rates equal to 110% of AFR.

3. The sale or exchange of the first $500,000 of land between related persons (brothers, sisters, spouse, ancestors, or lineal descendants) in 1 calendar year must have the lesser of a stated rate of 6% compounded semiannually or the AFR.

4. The imputed interest rules do not apply to the sale of personal-use property, annuities, patents, and any other sale that does not exceed $3,000.

5. Imputed as well as stated interest may be accounted for on the cash accounting method on sales of farms not exceeding $1 million and any other installment sale not exceeding $250,000.

6. The AFR can be the current month’s rate or the lower of the 2 preceding months’ rates.

**LEASING OF LAND AND OTHER FARM ASSETS**

**Production Flexibility Contract (PFC) Payments on Leased Land**

The 1996 Farm Bill provides production flexibility contract (PFC) payments to landowners and tenants based on the crop acreage base for the leased land. In general, these PFC payments are divided between the landowner and the lessee according to their respective share of the crop produced. This may induce landowners to shift from a cash rent arrangement to a share lease, to be able to share in the government payments. If the landowner begins to materially participate, then it will affect the landowner’s self-employment taxes and social security benefits, because the income would be reported on Form 1040 Schedule F. If the landowner does not meet any of the material participation tests (*Farmer’s Tax Guide*, IRS Pub. 225), then they can report their share of the crop on Form 4835, rather than as cash rent on Form 1040 Schedule E, and still not be subject to SE taxes.
Generally, rental income from real estate and from personal property leased with the real estate (including crop-share rents) is reported on Form 1040 Schedule E and not included in net earnings from self-employment. Crop- and livestock-share rents are reported on Form 4835 and flow through to Form 1040 Schedule E. However, there are two exceptions (the second of which is very important to farm operators):

1. Rentals received in the course of the trade or business of a real estate dealer are included in net earnings from self-employment.
2. Production of agricultural or horticultural commodities—income derived by the owner or tenant of land—is included in net earnings from self-employment if the following apply:
   a. There is an arrangement between the taxpayer and another person under which the other person produces agricultural or horticultural commodities on the land, and the taxpayer is required to participate materially in the production or the management of the production of such commodities.
   b. There is material participation by the taxpayer with respect to the agricultural or horticultural commodity.

The IRS (with support from the Tax Court) has taken the position that rent received by a taxpayer for land rented to a partnership or corporation in which the taxpayer materially participates is subject to SE tax (that is, the material participation of the entity arrangement is wrapped into the lease arrangement). Working for wages as an employee of the farm operation has also been considered as part of the overall arrangement, making the rental payments paid to the employee or landowner subject to SE tax. However, in December 2000, the Eighth Circuit Court of Appeals indicated that fair rental amounts would not be subject to SE tax because there would then be no indication that what would otherwise be compensation was being shifted to rental income. For taxpayers outside the Eighth Circuit, the IRS is not bound by this decision. However, the Eighth Circuit decision could be cited as substantial authority, permitting taxpayers to avoid the imposition of the 20% penalty for the intentional disregard of IRS rules. (Note: In October 2003, the IRS commissioner issued a nonacquiescence notice regarding this court decision.)

The language of I.R.C. §1402 appears to exclude rents paid on farm buildings and improvements from SE tax even if there is an overall arrangement found to be providing for material participation. That is, only land rent may be affected.

Income and expenses from the rental of personal property (not leased with real estate) is reported on Form 1040 Schedule C or C-EZ. Net profit from Form 1040 Schedule C is included in SE income. Material participation is not a factor in classifying income from the rental of personal property that is not leased with real estate.

Paying Rent to a Spouse

It is common for husbands and wives to own farm real estate as joint tenants—for one to operate the farm as the sole proprietor and to pay SE tax on the entire farm net profit. Paying rent to a spouse for use of the property he or she owns might reduce SE tax.

Although Rev. Rul. 74-209, 1974-1, allows an operator to deduct rent paid to a spouse as a joint owner of business property equal to one-half its fair rental value, more recent IRS rulings and opinions have qualified that ruling. The IRS indicated the deduction for spousal rent is allowable only if there is a bona fide landlord-tenant relationship and that substance rather than form governs. Note also the
issue discussed earlier, which could cause the rental income to be subject to SE tax if the spouse is an employee of the farm and the arrangement can be construed collectively as providing for material participation.

**Strategy**

If a sole proprietor deducts rental payments made to a spouse for use of his or her jointly owned property, or a farm entity pays land rent to one of its owners, the following precautions are suggested:

1. Make sure there is a formal written and signed rental agreement and an FMV rental rate for buildings separate from farmland, with at least annual payments.
2. Deduct the taxes, interest, and insurance on the rented property on the owner’s Form 1040 Schedule E.
3. If payments are made to a spouse, the spouse should deposit the rental income in a separate account and pay his or her tax and interest payments from the account.
4. The farm operator must file Form 1099 for all rent payments made in excess of $600.
5. The landowner must avoid material participation.

Passive activity issues also arise with rental arrangements. Although it may be possible to structure arrangements between spouses to avoid material participation for SE tax issues, the passive activity rules are different. For the passive activity rules, participation by a spouse is considered participation by the landowner. This deemed participation invokes the “self-rental” rules, which prevent any profits from the activity being used to allow the deduction of passive losses from other sources. However, under the “self-rental” rules, any losses from the rental arrangement would still be subject to the passive activity loss rule limitations.

**Valid Tax Lease or Conditional Sales Contract**

To determine whether an agreement is a lease or a sales contract, one needs to look at the intent, based upon the facts and circumstances in the agreement. This issue frequently arises when acquiring equipment. Generally, an agreement will be a conditional sales contract rather than a lease for tax purposes if any of the following are true:

1. The agreement applies part of each payment toward an equity interest.
2. The lessee gets title to the property upon payment of a stated amount under the contract.
3. The amount the lessee pays for a short period of time is nearly the amount that would have to be paid to buy the property.
4. The lessee pays much more than the current fair rental value of the property.
5. The lessee can purchase the property at a nominal price compared to the value of the property at the time of purchase.
6. The lessee has the option to buy the property at a nominal price compared to the total amount the lessee has to pay under the lease.

7. The lease designates part of the payments as interest or part of the payments is easy to recognize as interest.

The most common lease arrangement today is the leveraged lease of newly purchased equipment, where a large portion of the purchase price is financed with a loan that is fully amortized by lease payments from the lessee. These leases are used for automobiles, trucks, computers, equipment, and so forth. The IRS will accept these transactions as a valid lease if all the following conditions are met:

1. When the lessee places the property in use, the investment of the lessor must be at least 20% of the cost of the property.
2. The lease term includes all renewal or extension periods at fair rental value at the time of the renewal or extension.
3. No lessee may purchase the property at a price less than its FMV when exercised.
4. Lessee may furnish none of the cost of the property (that is, no trade-ins).
5. The lessee may not lend to the lessor any of the money or guarantee indebtedness to acquire the property.
6. The lessor must expect to receive a profit from the transaction.

For cash method taxpayers, the allowable deduction for prepaid lease payments, as a general rule, is limited to the taxable year for the months expired. In the case of Zaninovich v. Commissioner, the Court of Appeals ruled that if an expenditure results in the creation of an asset having a useful life that extends substantially beyond the close of the tax year, then that expenditure may not be deductible, or may be deductible only in part, for the taxable year made. The Court of Appeals adopted the 1-year rule, which treats an expenditure as a capital expenditure (buildings, machinery, and equipment) if it creates an asset or secures a like advantage to the taxpayer and has a useful life in excess of 1 year. On the other hand, an expenditure can be deducted in full if the benefit of the payment does not exceed 1 year (that is, cash rent).

**ALTERNATIVE MINIMUM TAX (AMT)**

The AMT is a separate but parallel tax system. Its purpose is to impose a minimum tax on high-income taxpayers with so many deductions, exemptions, and credits that their regular income tax is very low or zero. However, more taxpayers may be subject to AMT as personal deductions and nonrefundable credits increase. AMT may be created by adding back certain deductions and exemptions used to compute the regular tax and by disallowing most tax credits.

If the AMT regulations are not changed, it is estimated that by 2008 over 25% of taxpayers will be paying AMT.

Corporations with 3-year average annual gross receipts of less than $7.5 million are currently exempt from AMT.

AMT depreciation for pollution control facilities placed in service after December 31, 1998, may be computed using MACRS class lives and the SL method (for regular tax purposes these facilities qualify for 5-year amortization).
The AMT has a two-tiered 26% and 28% rate system for noncorporate taxpayers. The 26% rate applies to the first $175,000 of AMTI ($87,500 for married filing separately) in excess of the exemption. The 28% rate begins at $175,000 of AMTI. The lower capital gain rates used when computing regular taxes are also used to compute AMT on net capital gains. The exemptions are not indexed. However, the Tax Increase Prevention and Reconciliation Act of 2005 increased the exemption amount for 2006. Legislation is pending to extend the increase to 2007. Otherwise, after 2006, the exemption amount will return to earlier levels, for example, $43,000 for married filing jointly. The exemption is phased out at a rate of 25% of AMTI exceeding specific levels, as shown in Figure 30. If the taxpayer’s AMTI exceeds the exemption, he or she will have a calculated AMT but will pay AMT only if it exceeds the regular tax.

The AMT exemption for children under age 18 has been increased to the child’s earned income plus $6,050 for 2006. This amount is indexed for inflation. The annual exemption cannot exceed $42,500.

AMTI is calculated on Form 6251 by starting with Form 1040 taxable income before subtracting personal exemptions or the standard deduction, but after subtracting itemized deductions, if any. Any NOL carryforward used in calculating the regular tax is added (disallowed).

Adjustments and Preferences

The first category below contains adjustments treated as exclusions. The AMT from exclusion items is not eligible for a credit against the following year’s regular tax. The remaining adjustments are deferral items and are used in computing AMT credit in future years.

1. The exclusion items (in addition to the personal exemptions and standard deduction already excluded from the starting number from Form 1040) are certain itemized deductions from Form 1040 Schedule A, including most medical deductions, miscellaneous deductions subject to the 2% rule, state and local taxes, and interest adjustments. Interest adjustments include the difference between qualified housing interest and qualified residence interest, interest income on private
activity bonds that are exempt from regular tax, and a net investment interest adjustment that could be either positive or negative. Preferences treated as exclusion items include certain carryovers of charitable contributions, tax-exempt interest from specified private activity bonds, and excess tax-depletion allowances.

2. Itemized deductions disallowed on Form 1040 Schedule A for higher-income taxpayers are now allowed.

3. The depreciation adjustment is the net difference between accelerated MACRS depreciation and that allowed for AMT. This continues to be an adjustment item on farm tax returns. (See a discussion of this topic in the “Reporting Depreciation and Cost Recovery” section.)

4. Adjusted gain or loss from dispositions reported in Form 4797 or Form 1040 Schedule D and Form 4684 that have a different basis for AMT than for regular tax (because of the accumulated AMT depreciation adjustment)

5. Incentive stock option adjustments, passive activity adjustments, AMTI from estates and trusts, tax-exempt interest from private activity bonds

6. Accelerated depreciation on real and leased property and amortization of certified pollution control facilities placed in service before 1987

7. Other adjustments may be required for intangible drilling costs, long-term contracts, certain loss limitations, mining costs, patron’s distributions, pollution control facilities, research and experimental costs, and tax shelter farm activities.

Related Adjustments

Any item of income or deduction for a regular tax purpose that is based on income (e.g., earned income, AGI, MAGI, or taxable income from a business) must be recalculated based on alternative tax AGI.

**Alternative Tax Net Operating Loss Deduction (ATNOLD)**

The alternative tax net operating loss deduction (ATNOLD) is the last step in calculating AMTI. The alternative tax NOL is generally limited to 90% of AMTI and is calculated and deducted after all adjustments and preferences have been added in. For an ATNOLD generated or taken as a carryforward in tax years ending in 2001 or 2002, 100% may be deducted against AMTI. The ATNOLD is calculated the same as the regular NOL except

1. The regular tax NOL is adjusted to reflect the adjustments required by the AMT rules.

2. The ATNOLD is reduced by the preference items that increased the regular tax NOL.

Form 1045, Application for Tentative Refund, can be used to calculate the ATNOLD, providing the adjustments from the preceding list are made.

**Tentative Minimum Tax**

The minimum tax exemption reduced by the 25% phaseout is subtracted from AMTI before the 26% and 28% rates are applied. Taxpayers with net capital gains from Form 1040 Schedule D apply the appropriate capital gains rates by completing Part IV of Form 6251. However, be aware that the existence of capital gains may trigger AMT on ordinary income by causing the phaseout of the AMT
exemption amount. The AMT foreign tax credit is then subtracted to arrive at tentative minimum tax. A taxpayer who has regular foreign tax credit will compute AMT foreign tax credit in much the same manner, using a separate Form 1116 (Foreign Tax Credit).

Example 17. Taxpayer with a Large Net Capital Gain Mary and Tom Worker file a joint return in 2006. Their W-2 wage income was $71,600. The stock market had rebounded and on July 1, 2006, they liquidated a large portion of their holdings and have a $316,100 long-term capital gain. Their total income was $387,700. They claimed a $10,300 standard deduction and would have claimed $6,600 of personal exemptions, but they were completely phased out because of income levels. The result was $377,400 of taxable income. See Figure 31 for the calculation of their income tax liability.

<td><strong>$ 65,219</strong></td>
</tr>
</tbody>
</table>

*The $62,550 exemption is partially phased out at this level of total income.

Mary and Tom pay the larger of the two calculations, $65,219, which is $9,364 more than the regular tax liability.

---

Even though the long-term capital gains are taxed at the same rate for regular and AMT tax calculations, the benefits of the lower and wider regular income tax brackets for ordinary income as well as the standard deduction and personal exemptions are lost when taxpayers are subject to AMT.
The Working Families Relief Act of 2004 provides a technical correction to the Taxpayer Relief Act of 1997. The correction allows AMTI in excess of regular taxable income to be taxed at capital gains rates to the extent capital gains were included in regular taxable income. Tax returns for open years should be reviewed for possible amendment if AMT was paid and capital gains existed. This correction may save tax dollars under somewhat unique fact patterns.

**AMT and Credits**

Tentative minimum tax less the regular income tax equals AMT. Regular income tax excludes several miscellaneous taxes, such as the tax on lump-sum distributions. Regular income tax is reduced by the foreign tax credit (but not business tax credits) before it is entered on Form 6251.

The limitation on the use of the general business credits (GBC) is calculated on Form 3800, not on Form 6251. The GBC can only be used to reduce regular income tax to the amount of the tentative AMT.

The foreign tax credit is allowed in the calculation of AMT. The 2004 act extends the relief provisions of the 2002 act to taxpayers for tax years through 2005 by permitting the personal nonrefundable credits (such as the education credits, dependent-care credit, and saver’s credit) to offset both the regular tax and the minimum tax. At the time of publication, legislation was pending to extend this offset provision through 2007. The 2001 Tax Relief Act made permanent the ability to offset AMT by both the child tax credit and the earned income credit.

The other credits, including investment credit, can be carried forward to the extent that they do not provide a current-year tax benefit because of the AMT.

**Who-Must-File Test**

More taxpayers are required to file Form 6251 than have an AMT liability. Form 6251 must be filed if the tax on AMTI reduced by the exemption amount exceeds the taxpayer’s regular tax. If the total of AMT adjustments and preferences items is negative, Form 6251 should be filed to show the IRS that the taxpayer is not liable for AMT. Also, if any credits are limited by tentative AMT, Form 6251 must be filed.

**AMT Credit**

The AMT credit allows a taxpayer to reduce regular income tax to the extent that deferral adjustments and preferences created AMT liability in previous years. The AMT credit also includes any credit for producing fuel from a nonconventional source that was disallowed in an earlier year because of AMT. The credit means that the taxpayer, in the long run, will not pay AMT on the deferral items.

Part I of Form 8801, Credit for Prior Year Minimum Tax, is used to compute the AMT that would have been paid in the previous year on the exclusion items if there had been no deferral items. This requires the computation of a minimum tax credit NOL deduction, which is calculated like the ATNOLD except that only the exclusion adjustments and preferences are included. It also requires computation of the minimum foreign tax credit on the exclusion items.

Part II of Form 8801 is used to compute the allowable minimum tax credit and the AMT credit carryforward. The computation includes unallowed credit for producing fuel from a nonconventional source and the electric vehicle credit.
INFORMATIONAL RETURNS

Form 1099-MISC
Form 1099-MISC must be filed by any person engaged in a trade or business for each nonemployee paid $600 or more for services performed during the year. Rental payments, prizes, awards, and fish purchases for cash must also be reported when one individual receives $600 or more and royalties of $10 or more. Payments made for nonbusiness services are excluded. Payments made to corporations are excluded unless the payment is for legal services of any dollar amount (no $600 threshold). When payments of $600 or more are made to the same individual for services and merchandise, payments for the merchandise can be excluded only if the contract and bill show that a determinable amount was for the merchandise.

Form 1099-INT
Form 1099-INT, Statement for Recipients of Interest Income, is filed by bankers and financial institutions when interest paid or credited to individual taxpayers is $10 or more. It is also filed by any taxpayer if, in the course of a trade or business, $600 or more of interest is paid to a noncorporate recipient.

Form 8300
Form 8300 is filed by the recipient of cash in excess of $10,000 received in the course of a trade or business, within 1 year, in one lump sum or in separate payments, from the same buyer or agent, and in a single or related transaction. Cash includes all currency and specific monetary instruments (cashier’s checks, bank drafts, traveler’s checks, and money orders). The report must be filed within 15 days after receiving more than $10,000.

Money Services Businesses
Money Services Businesses (MSB) include any person conducting business of more than $1,000 with the same person on the same day in currency dealing or exchange, check cashing, issuing or selling or redeeming traveler’s checks or money orders, or providing money transfers in any amount.

Businesses must register with the Department of the Treasury and are required to file suspicious activity reports and to file currency transaction reports. The required forms include FinCEN Form 107, Registration of Money Services Business; FinCEN Form 104, Currency Transaction Report; and TD F 90-22.56, Suspicious Activity Report by Money Services Business.

Filing Dates and Penalties
The Forms 1099 must be furnished to the person named on the return on or before January 31 and to the IRS with Form 1096, Annual Summary and Transmittal, on or before February 28. There is a single penalty of $15 per information return for failure to file timely returns if filed by March 30 (30 days late), with a $25,000 cap for small businesses. This penalty increases to $30 per return if filed between
March 30 and August 1, with a $50,000 cap for small businesses. Returns filed after August 1 or never filed have a $50 penalty per return and a $100,000 cap for small businesses. The penalties are waived if the taxpayer can demonstrate that the Form 1099 error or late filing was due to reasonable cause and not to willful neglect.

There is a mandatory requirement to use magnetic media or electronic filing if the client has 250 or more informational returns. Taxpayers who ignore this requirement face a $50 penalty per informational return. Waivers for this requirement must be requested on Form 8508, 45 days in advance of the due date of the return. The due date for filing information returns with the IRS is extended to March 31 for returns filed electronically.

### SOCIAL SECURITY TAX AND MANAGEMENT SITUATION, AND OTHER PAYROLL TAXES

---

**Planning Pointer**

Annual increases in the earnings subject to social security (FICA and SE) taxes continue to place a high priority on exploring opportunities to reduce the burden of these taxes through wise tax management.

---

### The Current Social Security Tax

The social security earnings base increased to $94,200 for 2006. There is no cap on the amount of earnings subject to Medicare tax. FICA and SE tax percentage rates remain the same as in 2005. The total rate is divided into two components representing the social security and the Medicare tax. The maximum 2006 social security tax is $5,840.40 (employer’s share), up $260.40 from 2005. See Figure 33 for the 2005 through 2007 social security and Medicare tax rates.

¹Paid by both employer and employee.
²Projected

Employers use separate social security and Medicare tax withholding tables. Forms 941 and 943 require social security and Medicare taxes to be reported separately. The self-employment tax is calculated on Form 1040, Schedule SE. The SE tax is separated into a social security tax of 12.4% and a Medicare tax of 2.9% for a total tax of 15.3%.
Two Deductions for Self-Employed Taxpayers

1. Self-employed taxpayers receive an adjustment to gross income equal to one-half of SE taxes. The rationale for this tax deduction is that employees do not pay income taxes on the one-half of FICA taxes paid by their employer.

2. Self-employed taxpayers deduct 7.65% from SE income when computing net earnings from self-employment. This is achieved by multiplying total profit from Form 1040 Schedules C or F by 0.9235 on Schedule SE. This adjustment is made before applying the social security and Medicare tax earnings base. Taxpayers reporting less than $94,200 of SE income will receive the greatest benefit from the deduction. This adjustment is allowed because employees do not pay social security tax on the value of their employer’s share of FICA tax.

Farmer’s Optional Method

The optional method allows taxpayers to pay SE tax on two-thirds of gross farm income if gross income is below $2,400. Taxpayers with gross farm income in excess of $2,400 may use this optional method and report $1,600 of SE income when net farm income is less than $1,733. Self-employed nonfarmers have a similar option. Self-employed workers should give serious consideration to using the optional method if they are not currently insured under the social security system. To be eligible for social security disability benefits, a worker who is 31 or older, to be fully insured, must have 40 quarters of coverage or be currently insured with 20 quarters in the 10 years immediately before disability or death. The earnings required to receive one quarter of credit increased to $970 in 2006. Thus, the optional method will yield only one quarter of coverage. This is an important negative change in the coverage for farmers trying to be currently insured under the social security system. Earning $3,880 anytime during 2006 will provide four quarters of coverage.

Example 18. Ima Cow has $2,800 of 2006 gross farm income netting only $1,300 of net farm income. He would pay SE tax of $1,300 × 0.9235 × 0.153 = $184. The optional method would result in $1,600 × 0.153 = $245 of SE tax and still earn only one quarter of coverage. Ima may realize an additional benefit by using this method and paying the SE tax—that benefit would be an increase of reportable income for the EIC.

Nonfarm Optional Method

There is an optional method for determining net earning from nonfarm self-employment, much like the method discussed above. You may use this optional method if you meet all of the following tests:

1. You are self-employed on a regular basis. This means that your actual net earnings from self-employment were $400 or more in at least 2 of the 3 tax years before the one for which you use this method. The net earnings can be from either farm or nonfarm earnings or both.

2. You have used this method less than 5 years. (There is a 5-year lifetime limit.) The years do not have to be one after another.

3. Your net nonfarm profits were less than $1,733 and less than 72.189% of your gross nonfarm income.
Wages Paid to Spouse, Children, and Farm Workers

Farm employers must pay FICA taxes and withhold income taxes on their employees if they pay wages of more than $2,500 to all agricultural labor during the year. Any employee receiving $150 or more of wages is subject to FICA and tax withholding even if the employer’s total annual payroll is less than $2,500. All employees are covered if the annual payroll exceeds $2,500. Seasonal farm piecework labor is exempt from the $2,500 rule providing the employee is a hand harvester, commutes to the job daily from a permanent residence, and was employed in agriculture for less than 13 weeks in the prior year. Seasonal farm piecework labor is subject to the $150 rule. The $150 test is applied separately on each employee.

Wages earned by a person employed in a trade or business by his or her spouse and wages paid to individuals 18 years old and over working for their parent(s) in a trade or business are subject to FICA taxes and income tax withholding. Children under age 18 working for a parent’s partnership, corporation, or estate are also covered by social security. Sole proprietors and husband-wife partnerships that hire their children who are less than 18 years old need not pay social security tax or FUTA for children under 21. Wages paid by a parent to a child for domestic service in the home are not covered until the child reaches 21.

Taxation of Social Security Benefits

Social security recipients are potentially subject to two sets of rules on taxation of social security benefits. Disability benefits are treated the same way as other social security benefits. The rules that tax 50% of social security benefits have been in effect for several years. The rules that tax up to 85% of social security benefits for higher-income taxpayers became effective in 1994. The United States or Canadian social security benefits are taxed exclusively in the country where the recipient resides.

The 85% rules apply to single taxpayers, heads of household, married taxpayers filing separately with provisional incomes above $34,000, and married taxpayers filing jointly with provisional incomes above $44,000. Provisional income is MAGI plus 50% of social security benefits. The MAGI is AGI plus tax-exempt interest and certain foreign-source income. Since these numbers have not been increased for inflation, several more taxpayers each year will find themselves subject to taxation of social security benefits.

For taxpayers with provisional incomes above these thresholds, gross income includes the lesser of the following:

1. Eighty-five percent of the taxpayer’s social security benefit
2. The sum of 85% of the excess of the taxpayer’s provisional income above the applicable threshold amount plus the lesser of
   a. The amount of social security benefit included under previous law or
   b. The amount of $4,500 ($6,000 for married taxpayers filing jointly)

For married taxpayers filing separately, gross income will include the lesser of 85% of social security benefits or 85% of provisional income (that is, the threshold is $0).

The 50% rules apply to single taxpayers with provisional incomes between $25,000 and $34,000 and to married persons filing jointly with provisional incomes between $32,000 and $44,000. For taxpayers in these ranges, the inclusion is still limited to the lesser of (1) one-half of the benefits received, or (2) one-half of the excess of the sum of the taxpayer’s AGI, interest on tax-exempt obligations, and
half of the social security benefits over the base amount ($32,000 for persons filing jointly, $0 for married persons filing separately but living together, and $25,000 for all others). Medicare receipts are excluded from gross income.

**Reduction of Benefits**

When a person’s wage and self-employment earnings exceed the statutory earnings limit, social security benefits of the working beneficiary and dependents are reduced by a percentage of the excess earnings. In 2006 the annual earnings limit for those less than full retirement age is $12,480, and for those who have attained full retirement age, earnings are unlimited. The reduction of benefits is one-half of excess earnings when the taxpayer is less than full retirement age. Full retirement age for those born in 1940 is 65 and 6 months, but for those born in 1941 it is 65 and 8 months (see the Social Security Administration Web site for those born in later years). The 2006 cost-of-living increase in benefits was 4.1%.

**Retirement Planning Considerations**

Although the earnings cap for those workers over full retirement age who are getting social security benefits has been eliminated, those under full retirement age still have to stay under $12,480 in earnings in 2006 to avoid a reduction of benefits because of earnings. Usually work done prior to drawing benefits but paid later does not affect benefits. Commissions, sick pay, vacation pay, bonuses, and carryover crops might fall into the category not to be counted in earned income for social security, but they are taxable for federal tax purposes. Carryover grain sales made by retiring farmers are excluded from reducing social security benefits if both (1) the grain was produced and in storage before or during the first month of benefits, and (2) the grain is sold in the first year after beginning to draw benefits. Remember that this carryover grain sale must be reported on Schedule F and Schedule SE (Form 1040).

The retirement earning test for loss of some benefits for the year the individual reaches full retirement age in 2006 is $2,770 per month before the month of full retirement age. This test applies only to earnings prior to attaining full retirement age. If the retiree fails the test, $1 in benefits will be withheld for every $3 in earnings above the limit for that period of months. There is no limit on earnings beginning the month an individual attains full retirement age.

**“Nanny Tax” Social Security Domestic Employment Act**

This act allows the payment of employment taxes for domestic workers (babysitters, yard workers, house cleaners) to be reported on the employer’s income tax return. The 2006 wage threshold for reporting and paying social security taxes is $1,500 annually. During 2006, you may exclude from wages up to $105 a month in transit passes given to your employee to commute to your home by public transportation or up to $205 a month in employer-provided qualified parking.

Household employers use Schedule H (Form 1040) to report and pay social security, Medicare, FUTA (threshold still $1,000), and withheld income taxes. Farmers may treat wages paid to domestic workers under the $1,500 annual threshold rules, rather than the $150 and $2,500 agricultural wage thresholds, by filing Form 1040 Schedule H.

Household employers must include an employer identification number (EIN) on forms they file for their employees, such as Form W-2 and Form 1040 Schedule H. An EIN can be obtained by complet-
ing and filing Form SS-4, Application for Employer Identification Number. Order Form SS-4 by calling (800) TAX-FORM or online at www.irs.gov.

Wages paid to household workers under the age of 18 are exempt from any social security and Medicare taxes unless household employment is the worker’s principal occupation.

Preparers’ Election for Alternative Identification Numbers

As an alternative to preparers including their own social security number on prepared returns, they may use a preparer ID number (PTIN), obtained by filing Form W-7P. The number, when issued, will begin with a “P” followed by eight digits with no dashes. New York State also allows use of the PTIN.

Small Firms Will Pay FUTA Less Often

Beginning in 2004, employers are required to make a quarterly deposit for the Federal Unemployment Tax Act (FUTA) only if the accumulated tax exceeds $500. By raising the requirement, it has reduced the burden for employers with up to eight employees or less.

Reminder: As covered previously, New York employers will have their FUTA rate for 2006 drop back to 0.8% ($7,000 × 0.8%), the same rate that many other states pay. This amount will be reported on federal Form 940. The Form 940-EZ has been discontinued. Previously, quarterly FUTA deposits were required if FUTA liability exceeded $100 in the quarter, even if other payroll tax thresholds were not met.

NEW YORK STATE INCOME TAX

The New York State 2006 to 2007 Budget Bill was passed in April 2006. The bill included some important income tax changes for individuals and businesses.

Personal Income Tax

- A refundable home heating system credit
- A refundable clean heating fuel credit
- A property tax rebate program
- A firefighter’s and ambulance worker’s credit after tax year 2006
- Exemption of income received by militia for active service pursuant to federal orders
- Expansion of the eligibility of the farm property school tax credit
- Increases in the standard deduction to reduce marriage tax penalties

Sales and Use Tax

- Exempted clothing and footwear priced under $110 from state sales tax
- Capped the state sales tax on gasoline and diesel fuel over $2.00 per gallon
Nursing Home Assessment Tax Credit

This credit creates a refundable nursing home assessment tax credit under the personal income tax. Public Health Law imposes an assessment on the gross receipts of residential health-care facilities. These facilities, in turn, pass the costs of this assessment on to their clients. These costs are covered by Medicaid and private insurance, but individuals without such coverage must pay the assessment themselves. Taxpayers may claim the credit for any assessment amount that is separately stated and accounted for on the billing statement of a resident of a residential health-care facility which is paid directly by the individual taxpayer. The credit was first effective in tax year 2005.

Special Additional Mortgage Recording Tax Credit

The credit creates a refundable personal income tax credit for the special additional mortgage recording tax paid by lenders and individuals on residential mortgages. This credit is not available to taxpayers in counties within the Metropolitan Commuter Transportation District (MCTD) or Erie County if the mortgage relates to real property that in the aggregate contains not more than six residential dwelling units. Unused credit may be refunded or carried forward to future tax years. The credit is effective retroactively beginning in tax year 2004.

Limited Liability Company Fees

The LLC temporary fees were extended for the 2005 and 2006 tax years. The fees that will remain in effect are the $100-per-member fee, the $500 minimum fee per entity, and the maximum fee of $25,000 per entity. The application of the fee to single-member entities will also be continued. These provisions expire on January 1, 2007, after which the basic fee reverts to $50 per member, the minimum fee to $325 per entity, and the maximum fee to $10,000 per entity. Furthermore, single-member LLCs will no longer be required to pay the fee after that date.

Electronic Filing of Returns

The legislation mandates electronic filing for certain income tax preparers. It requires those preparers filing more than 100 original personal income tax (PIT) returns during calendar year 2006, and preparing at least one authorized return using tax preparation software in 2007, to file all authorized returns electronically. Preparers will be penalized $50 for each failure to electronically file returns. The penalty may be waived if the failure to electronically file was due to reasonable cause and not willful neglect. Taxpayers may elect not to electronically file their return, and that would also absolve the preparer from any penalty. Once a preparer is subject to mandatory electronic filing, he or she is subject to it forever.

Electronic Signature: Personal Identification Number (PIN)

New York has simplified the signature requirement for e-filed personal income tax returns. Beginning with tax year 2005, the paper signature was eliminated from Form IT-201-E. All taxpayers must sign their e-file returns using the self-select five-digit PIN method or the Practitioner PIN method similar to that of the IRS. If filing a joint return, a PIN is needed for each taxpayer. The PIN signature eliminates the need to mail any forms or documents to the Tax Department for an e-filed tax return.

In addition, many taxpayers were previously required to enter their previous-year Federal AGI as part of the signature process for New York State e-file returns. This requirement has been eliminated as well. This change to the signature process will simplify the filing process.
Please note that return preparers will be required to retain Form TR-579, New York State e-file Signature Authorization Form, for their clients who e-file.

**SUMMARY OF 2006–7 NEW YORK STATE TAX PROVISIONS**

(Reprinted from the “NYS Summary of Tax Provisions in 2006-07 Budget—September 2006” with permission.)

**PERSONAL INCOME TAX**

**Empire State Child Credit**

For taxable years beginning on and after January 1, 2006, resident taxpayers are allowed a refundable personal income tax credit equal to the greater of 33% of their allowed federal child tax credit under I.R.C. §24 or $100 per qualifying child. A taxpayer whose federal adjusted gross income exceeds the threshold amounts in I.R.C. §24 (b)(2) (that is, $110,000 in the case of a joint return, $75,000 in the case of an individual who is not married, and $55,000 in the case of married filing separately) cannot claim a credit based upon $100 per qualifying child even if that calculation provides the greater credit. For purposes of this credit, a qualifying child is a child who qualifies for the federal child tax credit and is at least 4 years of age. Married taxpayers who file separately for New York State purposes may elect to divide the credit in any manner that they want.

**Volunteer Firefighters and Ambulance Workers Credit**

This part provides a resident who serves as a volunteer firefighter or ambulance worker for the entire year with a $200 tax credit against his or her personal income tax. A volunteer firefighter or ambulance worker is eligible for this credit provided he or she does not receive a real property tax exemption that relates to his or her services as a volunteer firefighter or ambulance worker under Title 2 of Article 4 of the Real Property Tax Law. If both spouses filing a joint return qualify for the credit, they may both take the credit. Credit is effective for tax years beginning on or after January 1, 2007.

**STAR Rebate**

Part M provided for the payment of real property tax rebate checks based on a percentage of a taxpayer’s STAR exemption. The New York local property tax rebate is authorized for taxpayers who are entitled to basic or enhanced STAR exemptions, beginning with the 2006–7 school year. The rebates will be issued by October 31 each year when possible; otherwise a personal income tax credit would be available if the item is not in the state budget for that year. For the school year commencing July 1, 2006, the STAR rebate will be equal to 30% of the enhanced or basic STAR exemption applicable to the parcel for the 2005–6 school year multiplied by the applicable school tax rate for such school year.

Unanswered questions: Will I have to report the rebate on my personal income tax return as income?
1. If you claimed the standard deduction on your 2006 income tax return, do you have to report the rebate check as income?

2. If you itemize your deductions on your 2006 return and receive your rebate check in 2006, do you have to reduce the amount of your school district taxes included in your itemized deduction by the amount of the check?

3. Whether or not you itemize your deductions, if your rebate check is larger than the amount you paid in school district taxes for the 2006–7 school year, must you report the difference between the amount of your rebate check and the amount you paid in school taxes as income on your 2006 federal and state income tax returns?

### Noncustodial Parent Earned Income Tax Credit

For tax years beginning on or after January 1, 2006, and before January 1, 2013, New York State full-year residents who are noncustodial parents and pay child support may be eligible for the noncustodial parent New York State earned income credit. The credit is a refundable tax credit for a taxpayer who is 18 years of age or older and is the parent of a minor child or children with whom the taxpayer does not reside; has an order that has been in effect for at least one-half of the tax year requiring him or her to make child support payments that are payable through a support collection unit; and is current on his or her child support, for every order requiring him or her to make child support payments, in the tax year for which the credit is sought. The credit is equal to the greater of 20% of the amount of the federal earned income tax credit that would be allowed to parents with one qualifying child (determined from the column for single, head of household, or qualifying widow(er) in the federal EIC Table, even if your filing status is married filing joint return) or 2.5 times the amount of the federal earned income tax credit that would be allowed to taxpayers with no qualifying children. This credit is claimed in lieu of the New York State earned income credit. **Qualifying child** is a child who meets the definition of a qualifying child under §32(c)(3) of the Internal Revenue Code.

The Department will receive verification from the Office of Temporary and Disability Assistance (OTDA) that a taxpayer’s child support obligations are paid. A taxpayer who has been denied the credit has the right to request a review from the support collection unit through which the child support payments are made.

### Farmers’ School Tax Credit

The Tax Law, relating to the farmers’ school tax credit, has been amended to provide for the following enhancements effective for tax years beginning on or after January 1, 2006:

- The base acreage available to farmers in calculating their tax credit has been increased to 350 acres, up from the current limit of 250 acres.
- The modified New York State adjusted gross income limitation amount has increased from $100,000 to $200,000. Farmers with modified New York State adjusted gross income in excess of this $200,000 (formerly $100,000) are subject to a phaseout of the tax credit.
- Income received from the production of Christmas trees qualifies as gross income from farming.
- A new §210.22(j) has been added to allow for the election by the shareholders to deem the gross income of New York C corporations to their shareholders. In the event the election is made, the federal gross income from farming will be zero for the New York C corporation in the tax year the election is in effect.
Also new for tax year 2006, agricultural school property tax credit of commercial horse-boarding operations will be allowed against the New York corporate franchise and personal income taxes. The gross income from farming will also include gross income from commercial horse-boarding operations as defined in §301, the Agriculture and Markets Law, to the extent not included in farm income reported on the individual’s or corporation’s federal income tax return. This legislation clarified that horse boarding is included under the definition of federal gross income from farming.

An enhancement for tax years beginning in 2005 and after is that eligible school district property taxes levied on qualified property owned by the taxpayer’s father, mother, grandfather, grandmother, brother, or sister qualify for the credit if the taxpayer has a written agreement with the owner(s) that the taxpayer intends to eventually purchase said property, even if the taxpayer did not actually pay the school taxes on the qualified agricultural property. Also the owner(s) must give the taxpayer a document stating that the owner(s) is waiving his/her right to claim the credit on the qualified property that is subject to the written agreement. The requirements for the written agreement are that it must be signed by all parties and have been in effect for at least part of the tax year to which the tax credit relates. The requirements for the waiver form are that it can be only for one tax year and must include the name of the owner(s), the name(s) of the relative(s), a statement that the owner(s) are waiving the claim to the farmers’ school tax credit, the tax year, the date the agreement to sell was entered into, and the signature of the owner(s). This waiver document is irrevocable for the year entered into.

This credit has been extensively taught and included in this manual for the last several years. Refer to previous manuals, and for more information on the Farm Property School Tax Credit, see New York State Pubs. 51 dated November 1997 and 51.1 dated March 2004 for questions and answers.

### National Guard Subtraction

The class of members of the New York National Guard who may subtract from federal adjusted gross income the income received for performing active service within the state is expanded to include members of the New York National Guard who are called into active service by the federal government pursuant to federal active duty orders issued under Title 10 of the United States Code. This provision applies retroactively to taxable years beginning on and after January 1, 2004.

### Home Heating System Credit

For tax years beginning in 2006 and 2007, an individual can take a credit against his or her New York State personal income tax based on the costs incurred by him or her on or after July 1, 2006, and before July 1, 2007, that are directly associated with the replacement of an existing home heating system. The replacement system must be installed in a residence that is the taxpayer’s principal residence at the time the costs are incurred. The residence must be located in New York State and the installation must be completed before December 31, 2007. The credit is not allowed for the installation of a home heating system in a newly constructed principal residence. To qualify for this credit, the home heating system that replaces the old system must, after installation, qualify for and be labeled with an Energy Star label. The amount of the credit is equal to 50% of the costs incurred on or after July 1, 2006, and before July 1, 2007, that are directly associated with the replacement of an existing home heating system. However, the credit cannot exceed $500. Use Form IT-240, Claim for Home Heating Credit. If this credit exceeds the New York taxpayer’s personal income tax for the year, the excess may be credited or refunded.
Clean Heating Fuel Credit

The credit amount equals $0.01 per gallon for each percent of biodiesel included in the bioheat, not to exceed $0.20 per gallon, purchased by the taxpayer on or after July 1, 2006, but before July 1, 2007. The bioheat must be used for space heating or hot water production for residential purposes within New York State. If a taxpayer makes more than one purchase of bioheat that qualifies for this credit and the percentage of biodiesel included in the bioheat varies, a separate calculation must be made for each purchase of bioheat. If two or more taxpayers share in the purchase of bioheat, the amount of the credit allowable to each taxpayer is to be prorated according to the percentage of the total bioheat purchased by each taxpayer.

The credit is claimed for the tax year (2006 or 2007) in which the bioheat is purchased.

In general, bioheat is deemed purchased on the date of delivery regardless of when the payment is made. However, bioheat that is purchased under a plan that requires the taxpayer to prepay the supplier for a certain number of gallons of bioheat at a fixed price will be treated as purchased on the date the prepayment was made, not the date of delivery. The credit is claimed on Form IT-241, Claim for Clean Heating Fuel Credit. Credit not used can be credited or refunded.

Conservation Easement Credit

For tax years beginning on or after January 1, 2006, a new refundable income tax and corporate franchise credit is available equal to 25% of school district, county, and city/town real property taxes paid on land that is subject to a conservation easement. The conservation easement is a perpetual and permanent easement that meets the provisions of Article 49 of the Environmental Conservation Law and must be granted to either a public or private conservation agency. It must be filed with the Department of Environmental Conservation and comply with Title 3 of Article 49 and §170(h) of the Internal Revenue Code. The maximum allowable tax credit under this part is $5,000, and this credit in combination with any other credit for school district, county, and city/town real property taxes cannot exceed such taxes. If all or part of the allowable credit under this part is unable to be deducted, it is treated as an overpayment and can be either credited or refunded to the taxpayer.

Alternative Fuels Credit

Section 606(p) of the Tax Law has been amended to reinstate the alternative fuels credit for alternative-fuel vehicle refueling property for tax years beginning January 1, 2006, and ending December 31, 2010. Under prior law, the alternative fuels credit expired for tax years beginning after 2004. Taxpayers will be allowed a credit for alternative-fuel refueling property placed in service during the tax year. The alternative fuels credit is 50% of the cost of new alternative-fuel refueling property used in a trade or business and located in New York State and for which a deduction is allowed under Internal Revenue Code §30-C. There is no limit on the credit for alternative-fuel refueling property.

Alternative-fuel vehicle refueling property means any such property that is qualified within the meaning of §30-C of the Internal Revenue Code but does not include alternative-fuel vehicle refueling property relating to a qualified hybrid vehicle. The credit is not refundable but can be carried over for an unlimited number of years. In addition, recapture of the credit may be required if the property ceases to qualify.
For tax years beginning on or after January 1, 2007, the rehabilitation of historic properties credit and the historic homeownership rehabilitation credit are available. The rehabilitation of historic properties credit is a tax credit for a certified historic structure located in New York State in an amount equal to 30% of the credit amount allowed to such taxpayer under I.R.C. §47(c)(3) for the same tax year, not to exceed $100,000. The credit is not refundable but can be carried over for an unlimited number of years. If the corresponding federal credit is recaptured by the taxpayer, 30% of such amount is required as a New York credit recapture.

A certified historic structure is a structure that meets the definition of a certified historic structure under §47(c)(3) of the Internal Revenue Code. The historic homeownership rehabilitation credit is a tax credit for the rehabilitation of historic homes. The credit is 20% of the qualified rehabilitation expenditures made by the taxpayer, with respect to a qualified historic home, not to exceed $25,000 for all taxpayer residences. The historic homeownership rehabilitation credit may be claimed in the taxable year in which the final certification step of the certified rehabilitation is completed. In the case of a husband and wife, the amount of the credit may be divided in any manner they both elect. The credit is not refundable but can be carried over for an unlimited number of years.

**New York S Corporation Franchise Tax (Article 9-A)**

The Tax Law has been amended to eliminate the tax on entire net income (ENI) base for New York S corporations and impose only the fixed-dollar minimum tax as prescribed in §210(1)(d) of the Tax Law. For a termination year, the tax for a New York S corporation short year is the fixed-dollar minimum tax. Accordingly, a New York S corporation is subject to the applicable fixed-dollar minimum tax as shown in the following section.

**Fixed-Dollar Minimum Tax (Article 9-A)**

The fixed-dollar minimum tax for Article 9-A taxpayers, including New York S corporations, has reverted to the amounts that were imposed in 2003. Those amounts are shown in the table below.

<table>
<thead>
<tr>
<th>For a corporation with a gross payroll of</th>
<th>Fixed-dollar minimum tax equals</th>
</tr>
</thead>
<tbody>
<tr>
<td>$6,250,000 or more</td>
<td>$1,500</td>
</tr>
<tr>
<td>More than $1,000,000 but less than $6,250,000</td>
<td>425</td>
</tr>
<tr>
<td>More than $500,000 but not more than $1,000,000</td>
<td>325</td>
</tr>
<tr>
<td>More than $250,000 but not more than $500,000</td>
<td>225</td>
</tr>
<tr>
<td>$250,000 or less</td>
<td>100</td>
</tr>
<tr>
<td>However, if the corporation’s gross payroll, total receipts, and average value of gross assets are each $1,000 or less*</td>
<td>800</td>
</tr>
</tbody>
</table>

*If a tax year is less than 12 months, compute the gross payroll and total receipts by dividing the amount of each by the number of months in the short year and multiplying the result by 12.
Exemption from Tax for Certain Article 9-A Corporations

A corporation that is no longer doing business, employing capital, or owning or leasing property in this state in a corporate or organized capacity that has filed a final return with the Department of Taxation and Finance for the last tax year it was doing business and has no outstanding tax liability for such final return or any tax return for prior tax years will be exempt from the fixed-dollar minimum taxes for tax years following the last year the corporation was doing business. This provision applies to tax years beginning on or after January 1, 2006.

Reduction in State Sales Tax on Fuels

The New York State sales tax on gasoline and diesel fuel was capped at 8 cents per gallon on and after June 1, 2006. This reduction applies to the state portion (4%) on retail purchases of fuel. This cap amounts to 8 cents per gallon when fuel is priced at $2.00 per gallon or more. If fuel is lower than $2.00, it is taxed at the 4% sales tax rate. Local governments including New York City are authorized to make this same reduction or continue to charge their local tax on the full amount of the sales price of fuel.

State Sales Tax on Clothing and Footwear

The New York Legislature allowed the sales tax on clothing and footwear costing less than $110 to expire. Consequently, beginning April 1, 2006, there is a year-round exemption from New York state sales tax for those items costing less than $110 per time or pair. Any county or city in New York can choose to enact this exemption or continue collecting the local share of the sales tax.

OTHER ITEMS OF IMPORTANCE TO NEW YORK TAXPAYERS

Use Tax Collection Line on New York Income Tax Forms

The New York State personal and other income tax forms have a line 59 on Form IT-201 and line 35 on Form IT-150 for taxpayers to report unpaid state and local compensating use tax on purchases made inside or outside New York State. If you are an individual, estate, or trust that is a New York resident for sales and use tax purposes and you are filing a New York State personal income tax return or fiduciary income tax return, your sales tax is due on the due date of your income tax return, without regard to any extension of time to file your return. In the instructions, the taxpayers are informed of their legal requirements to remit such use taxes when they have made purchases outside of the state, in person, or through remote means.

Most tangible personal property is subject to sales or compensating use tax. Some examples are tobacco products, alcohol, candy, clothing, books, electronic equipment, furniture, collectibles, gasoline when purchased without paying the tax, and other items purchased in and out of state. You also may owe additional local tax if you bring property to your locality that you purchased in another locality that has a lower tax rate.
If you are an individual, estate, or trust that is a New York resident for sales and use tax purposes and you are not filing a New York State personal income tax return or fiduciary income tax return, you must pay any sales or use tax you owe by filing Form ST-140, Individual Purchaser’s Report of Sales and Use Tax, for the period covered by your tax year for federal income tax purposes. Form ST-140 is due on the date your federal income tax return is due, without regard to extensions of time to file. If no federal income tax return is required to be filed, Form ST-140 is due on the date your federal return would have been due, without regard to extensions of time to file. You must report and pay your sales or use tax liability on your ST-140, Individual Purchaser’s Report of Sales and Use Tax, on the same items listed above for New York residents.

For further questions and answers, see New York State Department of Taxation and Finance Pub. 774 [2/06], Purchaser’s Obligations to Pay Sales and Use Taxes Directly to the Tax Department, and instructions for the specific income tax return of the taxpayer. For the current sales tax rates by county, see New York State Department of Taxation and Finance Pub. 718 (8/06), New York State Sales and Use Tax Rates by Jurisdiction; New York State Department of Taxation and Finance Pub. 718-A (8/06), Enactment and Effective Dates of Sales and Use Tax Rates; and New York State Department of Taxation and Finance Pub. 718-C (8/06), Local Sales and Use Tax Rates on Clothing and Footwear.

The New York State school tax relief (STAR) program provides a partial exemption from school property taxes for owner-occupied primary residences. There is an exemption for those property owners under 65 and for those over 65 years of age. Senior citizen property owners must be 65 years of age or older, as of December 31, 2006, and must provide their 2005 federal or state income tax return, not to exceed $67,850 (preliminary estimate) AGI, reduced by any “taxable amount” from an IRA, or individual retirement annuity.

The enhanced STAR senior citizen exemption is a $50,000 (adjusted by individual counties’ equalization rate) exemption from the full value of their property. The eligible senior citizen must apply with the local assessor for the enhanced STAR exemption by March 1, in most towns. This is the taxable status date, but deadlines vary, so most taxpayers should apply earlier. In counties where the sales price differential factor is greater than 1, the exemption amounts will be adjusted upward.

The basic STAR program is available to all primary residence homeowners, regardless of age. The full value assessment exemption is $30,000 (adjusted by individual counties’ equalization rate) in the school year 2006 to 2007. To be eligible, an owner must own and live in a one-, two-, or three-family residence, mobile home, condominium, cooperative apartment, or farmhouse. Under recent legislation, the exemption for persons with disabilities and limited incomes is subtracted from assessed value before subtracting the STAR exemption.

Chapter 83 of the Laws of 2002 provides for a cost-of-living adjustment to the maximum income allowed under the enhanced STAR exemption for persons age 65 and over. For applications on the 2007 assessment rolls, the maximum 2005 income tax year income AGI limit is estimated to be $67,850. This amount is indexed annually based on the rate of inflation used to index social security benefits. The taxable status data related to assessment rolls to be completed in 2007 is the applicable income tax year of 2005.
New York Tuition Savings Program

A taxpayer may contribute up to $5,000 per year exempt from New York personal income tax to an I.R.C. §529 account to be used for higher education expenses at qualified institutions. Married individuals can each contribute up to $5,000 each year. These contributions are subtracted from a taxpayer’s federal AGI in calculating the New York AGI. The interest income earned receives tax-free treatment until withdrawn. Nonqualified withdrawals are subject to income tax. New York State contributions to all accounts for any beneficiary are subject to a maximum account balance, which is established annually to reflect the cost of a 4-year undergraduate education.

Standard Deductions and Exemptions

The standard deductions and exemptions for 2006, based on tax status, are shown in Figure 34.

**FIGURE 34. New York State Standard Deductions and Exemptions for 2006**

A New York State exemption is not available for either the taxpayer or the spouse.

New York Personal Income Tax Rates

There are three separate rate tables for (1) married filing jointly and qualifying widow(er); (2) heads of households; and (3) single, married filing separately, and estates and trusts (Figure 35). Filing status conforms to federal status except that when the New York resident status of spouses differs, separate returns must be filed.

The temporary highest tax bracket in effect for tax years 2003 to 2005 have been eliminated in 2006.
An EIC is allowed against New York personal income tax. The New York earned income credit (NY EIC) is 30% of the allowable federal EIC for taxable years. The EIC must be reduced by the taxpayer’s household credit. Therefore, a taxpayer will not receive the benefits of both the NY EIC and the household credit. To claim this credit you must complete Form IT-215, Claim for Earned Income Credit. For more information, see Pub. 310-NY.

Taxpayers with NYAGI of $25,000 or less are allowed a New York child- and dependent-care (NY CDC) credit of 110% of the federal child- and dependent-care credit whether or not you actually claimed the federal credit. This refundable credit is gradually phased down from 110% to 20% of the federal CDC credit for taxpayers with NYAGIs between $25,000 and $65,000. At $65,000 and over...
NYAGI, the rate remains at 20% of the federal credit. To claim this credit you must complete Form IT-216, Claim for Child and Dependent Care Credit.

**Gross Receipts Tax Credit**

For tax years ending after January 1, 2000, owners, beneficiaries (estates and trusts) that are owners, partners, or New York S corporation shareholders of an industrial or manufacturing business (IMB) are allowed a credit against the tax imposed under Article 22 of the Tax Law. The credit is equal to the sum of the taxes imposed under §§186-a, 186-c, 189, and 189-a of Article 9 of the Tax Law for gas, electricity, water, and refrigeration used or consumed in New York State, for which taxes were paid or passed through to the IMB during the year. New York State farmers can claim gross receipts taxes paid to their energy suppliers on the New York State DTF-623 tax form. This is a refundable tax credit that expires for tax years ending after December 31, 2006. Farmers must contact their electric, natural gas, steam, water, or refrigeration suppliers to get the amount of New York gross receipts tax paid over the current tax year. The business operator should contact their utility suppliers to get a statement of the amount of gross receipts tax paid. Farmers then can claim the IMB credit on their state return as a credit or refund. The credit cannot be carried over. The credit amount transfers from DTF-623 to the appropriate lines on their state return depending on the type of business entity filing. The one-page form and instructions can be downloaded at [http://www.tax.state.ny.us/](http://www.tax.state.ny.us/). For further information, see New York State Office of Tax Policy Technical Services Division Bulletin TSB-M-00(3)I.

**College Tuition Tax Credit/ Deduction**

For tax years beginning on or after January 1, 2001, full-year resident taxpayers may claim on Form IT-272 either a refundable tax credit or an itemized deduction for qualified college tuition expenses (not room, board, transportation, fees, books, etc.) paid on behalf of the taxpayer, the taxpayer’s spouse, or the taxpayer’s dependents. You must file Form IT-150 or Form IT-201 to get the credit from Form IT-272. You must file Form IT-201 to get the itemized deduction. The tax benefits are available for undergraduate-level study at any qualifying in-state or out-of-state institution of higher education. The student does not need to be enrolled in a degree program to claim either tax benefit.

The itemized deduction is also available to part-year residents and nonresidents. However, the refundable credit is limited to full-year New York State residents.

Qualified institutions of higher education include any institution of higher education, as well as business, trade, technical, or other occupational schools that are recognized and approved by the Regents of the University of the State of New York or a nationally recognized accrediting agency or association accepted by the regents and that provide a course of study leading to the granting of a post-secondary degree, certificate, or diploma.

For purposes of both the credit and deduction, qualified college tuition expenses are defined as tuition expenses less refunds, scholarships, or financial aid. It does not matter whether the expenses were paid by cash, by check, by credit card, with borrowed funds, or with funds from a qualified state tuition program. The maximum expense amount is $10,000 per student.

If an eligible student is claimed as a dependent on another person’s tax return, only the person who can claim the student as a dependent may claim the credit. If an eligible student is not claimed as a dependent on another person’s tax return, only the student may claim the credit. However, if you are married and filing separate returns, see the next section, “Spouses Filing Separately.”

The maximum amount of qualified college tuition expenses allowed for each eligible student is $10,000, and there is no limit on the number of eligible students for whom you may claim a credit.
Full-year New York State residents may claim a refund of any college tuition credit that is in excess of their New York State tax liability.

**Spouses Filing Separately**

If a taxpayer and spouse are filing separate returns, they can each claim their own credit on a separate Form IT-272. Or, one may claim the college tuition credit and the other may claim the itemized deduction. However, they must each claim their separately computed credit or deduction based only on the amount of qualified college tuition expenses each has paid (or was treated as having been paid) for the taxpayer, spouse, or person claimed as a dependent on their separate return. The taxpayer cannot claim a credit or deduction for qualified college tuition expenses that were paid for the spouse’s dependent. (These expenses are treated as paid by the spouse for purposes of the credit.)

The refundable credit is calculated as follows:

- For taxpayers with expenses of $5,000 or more, the credit equals the qualified tuition expenses times 4%.
- For taxpayers with expenses of less than $5,000, the credit equals the lesser of the amount spent for qualified tuition expenses or $200.

In the tax year 2006 the credit will be as shown in Figure 36.

<table>
<thead>

</thead>
<tbody>
<tr>
<td><strong>Tuition Expense Range</strong></td>
</tr>
<tr>
<td>$0 to $5,000</td>
</tr>
<tr>
<td>$5,000 to $10,000</td>
</tr>
</tbody>
</table>

In lieu of claiming the credit, a resident may elect to claim the New York college tuition itemized deduction if he or she itemized deductions on his or her federal return. The deduction is equal to the qualified tuition expense (limited to $10,000). Both the credit and the deduction should be calculated to determine which provides the greater tax benefit. You cannot claim both the credit and the deduction. The college tuition itemized deduction is also available to nonresident and part-year resident taxpayers.

For comparative purposes the benefit of the college tuition itemized deduction is determined by multiplying your tuition expense, up to $10,000, by your marginal state income tax rate. Use the worksheet in the instructions to help determine if the college tuition itemized deduction or the college tuition credit offers the greater tax savings. Those who do not itemize will take the tuition credit option.

**Question 1.** In 2005, I paid college tuition expenses to an institution of higher education that are deductible (above-the-line adjustment of up to $4,000) on my federal income tax return. Are these expenses considered qualified college tuition expenses for New York State returns in 2005? *But at press time this deduction has not been extended, so it is not applicable to 2006 returns.*

**Answer 1.** Yes, the expenses are considered qualified college tuition expenses, and you can claim the New York credit (on the 2005 NYS return) or deduction for the expenses even though you deducted them on your 2005 federal return.
Question 2. I paid college tuition expenses to an institution of higher education that I used to claim a federal education credit. Are these expenses considered qualified college tuition expenses for New York State returns?

Answer 2. Yes, the expenses are considered qualified college tuition expenses, and you can claim the New York credit or deduction for the expenses even though you used them to claim the HOPE or Lifetime Learning federal education credits.

Question 3. I paid college tuition payments to an institution of higher education from an I.R.C. §529 plan. Are these expenses considered qualified college tuition expenses for New York State returns?

Answer 3. Yes, New York State Tax Law permits taxpayers that contribute to New York’s §529 plan (College Choice) to subtract up to $5,000 ($10,000 MFJ) in computing NY AGI, and it allows taxpayers to treat distributions made from the plan to count toward the tuition allowable for the New York tuition deduction—a “double dip.”

The three preceding questions are where New York State permits multiple deductions for higher education costs. If your taxpayer has not taken these multiple deductions, they may want to consider filing amended returns.

For more information see Pub. 10-W, FAQs: New York State College Tuition Credit and Itemized Deduction and FAQs: New York State College Tuition Credit and Itemized Deduction.

Qualified Long-Term Care Insurance Credit

The long-term care credit was increased in 2004 to 20% of the premiums paid during the year for qualified long-term insurance policies. This credit is not refundable for personal income taxpayers, but unused credit can be carried forward. If the amount of the credit allowable for any taxable year exceeds the tax liability for the year, the excess may be carried over to the following year or years and then deducted from the liability for such year or years. The credit is also available to employers who pay premiums for qualifying policies for their employees. To claim this credit, you must complete Form IT-249.

New York State Investment Credit (NYIC)

The New York State investment credit (NYIC) for individuals is 4% on qualified tangible personal property (and other tangible property used in production, including buildings and structural components) acquired, constructed, reconstructed, or erected on or after January 1, 1987. For corporations, the rate is 5% on the first $350,000,000 of investment credit base and 4% on any excess. MACRS property placed in service after December 31, 1986, qualifies for NYIC. This means that farm property in the ACRS or MACRS 3-year class should qualify. There is no reduction in the amount of credit allowed for 3-year property, and if kept in use for 3 years, it will earn 4% NYIC. Highway-use motor vehicles are ineligible for NYIC.

All ACRS and MACRS property that qualifies for NYIC and is placed in a 5-year or longer life class earns full credit after 5 years, even if a longer SL option is elected. The same is true of 7-, 10-, 15-, and 20-year MACRS property. Non-ACRS/MACRS properties that qualify for NYIC must still be held 12 years.
Excess or unused credit may be carried over to future tax years, but the carryforward period is limited to 10 years. In no event may the credit claimed prior to 1996 be carried over to taxable years beginning on or after 2006. The 1997 bill expanded general business corporations’ carryforward period for unused investment tax credits from 10 to 15 years. There is no provision for carryback of NYIC. Unused NYIC claimed by a new business is refundable. The election to claim a refund of unused credit can be made only during the first 5 years a business operates in New York. Shareholders of electing S corporations that qualify as new businesses may also receive refunds of their pro rata shares of the corporation’s credit. Only proprietorships and partnerships qualify. This refundable credit is not an additional credit for new businesses. A business that is substantially similar in operation and ownership to another business that has operated in the state will not qualify.

If property on which the NYIC was taken is disposed of or removed from qualified use before its useful life or specified holding period ends, the difference between the credit taken and the credit allowed for actual use must be added to the taxpayer’s tax liability in the year of disposition. However, there is no recapture once the property has been in qualified use for 12 consecutive years.

Use IT-212 to claim NYIC and retail enterprise credit, as well as to report early disposition of qualified property.

### New York State—Other Miscellaneous Credits

- **New York State Household Credit**—You can claim this credit right on Forms IT-150 or IT-201. For more information, see the instructions for your form.

- **Resident Credit**—If you are a full-year or part-year resident of New York State and part of your income was taxed by another state, by Washington, D.C., or by a Canadian province, you may claim this credit; to do so, you must complete Form IT-112-R and attach a copy of the other tax return. For more information, see form instructions.

- **Automated External Defibrillator Credit**—To claim this credit, you must complete Form IT-250.

- **Employment of Persons with Disabilities Credit**—To claim this credit, you must complete Form IT-251. For more information, see TSB-M-98(1)I.

- **Fuel Cell Electric Generating Equipment Credit**—To claim this credit, you must complete Form IT-255.

- **Solar Electric Generating Equipment**—To claim this credit, you must complete Form IT-255. For more information, see TSB-M-00(2)I and form instructions.

- **Low-Income Housing Credit**—To claim this credit, you must receive a housing credit allocation from the Division of Housing and Community Renewal (DHCR) and complete Forms DTF-625 and DTF-625ATT and DTF-624. For more information, see the form instructions or access the DHCR Web site.

- **Qualified Emerging Technology Company Employment Credit**—To claim this credit, you must complete Form DTF-621. For more information, see TSB-M-00(2)I and form instructions.

- **Qualified Emerging Technology Company Capital Tax Credit**—To claim this credit, you must complete Form DTF-622. For more information, see TSB-M-00(2)I and form instructions.

- **Resident Credit Against Separate Tax on Lump-Sum Distributions**—To claim this credit, you must complete Form IT-112.1 and attach a copy of federal Form 4972 and a copy of the other state tax return. For more information, see form instructions.
**New York State Minimum Tax**

Federal items of tax preference after New York modifications and deductions are subject to the New York State minimum tax rate of 6%. The specific deduction is $5,000 ($2,500 for a married taxpayer filing separately). A farmer who has over $5,000 of preference items must complete Form IT-220 but may not be subject to minimum tax. New York personal income tax (less credits) and carryover of NOLs are used to reduce minimum taxable income. The NYIC cannot be used to reduce the minimum income tax.

**Estimated Tax Rules**

If you have taxable income from which no taxes are withheld during the year, you may have to pay estimated tax. However, you will not have to pay estimated tax if you meet any of the following qualifications:

- Your tax withholding during 2006 is at least 90% of your total tax due for tax year 2006.
- Your tax withholding during 2006 is at least 100% of your total tax for the 2005 tax year (110% of that amount if you are not a farmer or a fisherman and the New York AGI shown on that return is more than $150,000 or, if married filing separately for 2006, more than $75,000). However, if you did not file a 2005 tax return, or your 2005 tax return did not cover all 12 months, this item does not apply.
- You owe less than $300 of New York State, city of New York, or city of Yonkers tax after deducting tax withheld and credits that you are entitled to claim. The $300 threshold is applied separately against each taxing jurisdiction.

**Payments for New York State Income Tax**

The New York Tax Department is now accepting credit cards for payment of personal income tax liabilities and estimated tax payments, which can be made through certain plastic card vendors. The taxpayers pay the convenience fees for this service.

**Lost in the Mail Is Not an Excuse but Real**

More than 30,000 pieces of mail sent from upstate New York to New England destinations were destroyed en route. Letters mailed on either June 27 or June 28, 2006, heading to the IRS office in Andover, Massachusetts, and surrounding states were completely destroyed when the truck fell into a 150-foot-wide chasm and could not be salvaged. Taxpayers can rest assured that no one else saw or received this mail, but neither did the IRS office.
Check the Cornell Agricultural and Small Business Finance Web site (http://agfinance.aem.cornell.edu) for information on the following:

- Late-breaking tax legislation
- Problems encountered by other Cornell Tax School practitioners
- Tax issues affecting New York State filers
- Dates of next year’s Cornell educational schools

This publication is distributed with the understanding that the authors, publisher, and distributor are not rendering legal, accounting, IRS, or other professional advice or opinions on specific facts or matters and, accordingly, assume no liability whatsoever in connection with its use or future rulings that may affect the material presented. This published educational advice is not intended or published to be used for the purpose of avoiding any penalties that may be imposed on the taxpayer, and it cannot be used by any taxpayer for such purpose. The information provided is for educational purposes only, and nothing herein constitutes the provision of legal advice or services.
