Conclusion	12

INTRODUCTION

This report summarizes 1968 farm business records by type of farming for 225 northern Minnesota farmers. Farm records were supplied by area vocational-technical schools at Duluth and Thief River Falls. Practically all of the farms are located in the areas east of the Red River Valley.

The purpose of this publication is to present rather specific information concerning costs and returns from actual farming operations by types of farming for use by farmers and individuals working with farmers. Information of this nature assists in determining the most profitable types of farming and provides information for farm planning.

Sufficient records were obtained from three types of farming for this report (table 1). Farms were classified according to the proportion of cash income received from the various livestock enterprises and from the

* Agricultural Economics and Agricultural Education, respectively.

The authors are indebted to Janet B. Otis and Dorothy T. Spreck for their assistance in the preparation of this report.

sale of crops. The following classifications were used in this report:

1. Specialized farms - 80 percent or more of the cash income was from one enterprise or source.
2. Two enterprise farms - 80 percent of the income was from two enterprises, with a minimum of 20 percent from the smallest of the two.

Specialized dairy farms are further divided into three categories based on the average number of dairy cows maintained.

Table 1. Number of Farms by Type

Type	Number
Cash crops	56
Dairy, under 25 cows	47
Dairy, 25-34 cows	48
Dairy, 35 cows and over	33
Dairy and cash crops	<u>41</u>
Total	225

CAPITAL MANAGED AND EARNINGS

The average value of capital used per farm for the various types of farming is shown in table 2. These data represent values as reported by farmers in their farm business records and deviate somewhat from current market values for assets with a long useful life, such as real estate. Real estate improvements are valued at cost and depreciated on the basis of estimated life. These book values tend to be below present market values because of changes in the price level. Also, land is valued at cost and has not been corrected for the price inflation which occurred after many of the farms were purchased. Capital managed includes the values of any assets furnished by landlords.

Table 2. Summary of Inventories by Type of Farming, 1968

Item	Cash crops	Dairy, under 25 cows	Dairy, 25-34 cows	Dairy, 35 cows & over	Dairy, cash crops

18. Total capital	\$69642	\$31966	\$48092	\$74470	\$51860

* Not including farm dwelling.

Capital managed per farm varied according to the size of farm in terms of acres and the amount of livestock maintained. Average values of real estate (land and farm buildings) ranged from \$44 per acre on the cash crop farms to \$73 per acre on the large dairy farms.

Earnings are presented on a cash basis in table 3. In order to make all farms comparable, receipts and expenses of landlords are included. "Labor Earnings" is the amount that would be left as a salary to the farm operator if he paid hired man's wages for the labor of other members of the family and five percent interest on capital used.

Table 3. Summary of Earnings - Cash Statement, by Type of Farming, 1968

41. Board for hired labor	89	4	23	122	72
42. Total expenses	<u>\$28548</u>	<u>\$11521</u>	<u>\$15957</u>	<u>\$30089</u>	<u>\$18141</u>
43. Labor earnings	\$ 7282	\$ 3186	\$ 6778	\$ 9895	\$ 7362
44. Net cash income (line 11 - line 37)	\$ 3715	\$ 1912	\$ 5674	\$ 8054	\$ 5902

About 50 percent of each dollar of sales is required to pay cash operating expenses (table 4). A relatively large proportion of the purchases per \$100 of total sales on specialized crop farms was for crop expenses including fertilizers. Purchased feeds were an important item on the dairy farms. Capital expenditures showed more variation and ranged from about 20 percent of each dollar of sales on medium sized dairy farms to about 40 percent on specialized crop farms. The amount remaining above all purchases, 15 percent in the case of crop farms and 30 percent in the case of medium sized dairy farms, is what is left for family living expenses, interest on money borrowed, debt retirement and other savings.

Table 4. Purchases per \$100 of Total Sales, by Type of Farming, 1968*

Item	Cash crops	Dairy, under 25 cows	Dairy, 25-34 cows	Dairy, 35 cows & over	Dairy, cash crops
1. Dairy cattle bought	\$.02	\$ 3.91	\$ 2.18	\$ 1.10	\$ 2.32

20. New power and machinery	22.98	12.80	12.52	14.33	18.65
21. New livestock equipment	.12	1.65	2.70	3.09	1.30
22. New buildings & real est.	15.89	14.82	5.71	7.51	5.30
23. Total purchases	\$86.96	\$83.37	\$69.85	\$75.79	\$72.02

* Total purchases and sales are shown in table 3.

The data in table 5 report earnings on an enterprise or accrual basis. Earnings statements on the cash basis, as reported in table 3, stress purchases and sales; all inventory adjustments are entered as one item--either an increase or a decrease in farm capital. Likewise, family living from the farm is entered as a single item of income. On the enterprise or accrual basis, the value of livestock and livestock products produced includes the difference between sales and purchases of livestock, sale of products, value of livestock and products used in the home, changes in inventories, and an accounting of transfers

25. Total expense	\$14040	\$ 6736	\$ 9902	\$17729	\$10919
26. Labor earnings	\$ 7282	\$ 3185	\$ 6778	\$ 9895	\$ 7362

between enterprises. The resulting figure represents value of livestock and livestock products added by the enterprise. Costs of operating each service enterprise (autos and trucks, tractors and crop machinery, etc.) are calculated in a similar manner. Credit is given to crops for feed raised on the farm and consumed by livestock. Thus, while earnings statements on an accrual basis do not show purchases and sales, such a statement does more truly show the value produced for the productive enterprises and the net expenses for each of the service enterprises.

Crops are a major source of income on all farms when credit is given to crops for feed raised on the farm and consumed by livestock (table 6). The proportion of farm income from livestock, crops, and miscellaneous sources is based on receipts and net increases, as shown in table 5. Return over feed is the amount of income added by livestock and the return to crops represents the value of crops produced during the year.

Table 6. Proportion of Farm Income from Livestock, Crops, and Miscellaneous Sources, by Type of Farming, 1968

Item	Cash crops	Dairy, under 25 cows	Dairy, 25-34 cows	Dairy, 35 cows & over	Dairy, cash crops
1. Livestock	2.5	57.0	59.8	66.4	40.0
2. Crops	86.1	39.0	37.4	31.1	57.2

Total	100.0	100.0	100.0	100.0	100.0

LAND USE AND CROP YIELDS

Specialized dairy farms have a large proportion of land in pasture, hay and silage crops, and a smaller proportion of tillable land than is true for crop farms (table 7). Small grains (oats, barley, wheat, flax, and rye) are the predominant crops on cash crop farms.

Table 7. Distribution of Acres in Farm, by Type of Farming, 1968

Item	Cash crops	Dairy, under 25 cows	Dairy, 25-34 cows	Dairy, 35 cows & over	Dairy, cash crops

* Less than 5 cases.

** Yield per acre not available.

RETURN FROM DAIRY CATTLE

Costs and returns from dairy cattle are shown in tables 9, 10, and 11 for the specialized dairy farms and the dairy and cash crop farms. Gross return per cow was \$527 on the large dairy farms (35 cows and over) compared to \$418 for the small dairy farms. Of this difference in gross return per cow, about \$40 is due to the higher price of 41 cents per 100 pounds of milk received by the operators of the large dairy farms. The larger herds also had about 1600 pounds more milk per cow and only a \$20 increase in feed costs. Home grown feeds have been charged at current market prices during the year. Purchased feed were charged at cost.

Table 9. Factors of Costs and Returns from Dairy Cows, by Type of Farming, 1968

Item	Dairy, under 25 cows	Dairy, 25-34 cows	Dairy, 35 cows & over	Dairy, cash crops
Number of cows	19	30	47	22

Table 10. Feed Costs and Returns from Other Dairy Cattle, by Type of Farming, 1968

Item	Dairy, under 25 cows	Dairy, 25-34 cows	Dairy, 35 cows & over	Dairy, cash crops
Number of head	25	36	62	30
Net increase in value per head	\$97.81	\$93.24	\$99.77	\$93.21
Feed per head, lbs.:				
Concentrates	622	506	709	530
Hay	2519	2663	2820	2732
Silage	2998	2817	2618	2704
Whole milk	251	178	126	117
Total feed cost per head	\$53.86	\$51.24	\$55.50	\$47.41
Return above feed cost per head	\$43.95	\$42.00	\$44.27	\$45.80
Returns for \$100 of feed	\$182	\$182	\$181	\$197

Table 11. Feed Costs and Returns from All Dairy Cattle, by Type of Farming, 1968

Item	Dairy, under 25 cows	Dairy, 25-34 cows	Dairy, 35 cows & over	Dairy, cash crops
Value of produce per cow:				
Dairy products	\$418.78	\$471.04	\$529.84	\$417.51
Net increase in value	<u>130.16</u>	<u>115.66</u>	<u>127.11</u>	<u>122.76</u>
Total value produced	\$548.94	\$586.70	\$656.95	\$540.27
Feed per cow, lbs.:				
Concentrates	4935	4939	5282	4313
Hay	11010	9968	10844	10568
Silage	11429	13515	14218	12090
Total feed cost per cow	\$253.09	\$253.73	\$272.57	\$222.18
Returns above feed cost per cow	\$295.85	\$332.97	\$384.38	\$318.09
Returns for \$100 of feed	\$217	\$231	\$241	\$243
Miscellaneous expenses per cow	\$15.90	\$23.30	\$28.82	\$19.38

The return for \$100 of feed ranged from \$230 to \$260. Feed is the largest single item of cost for all classes of livestock and, in the case of dairy cattle, makes up about 50 percent of the total cost. Thus, a return of about \$200 for each \$100 of feed is necessary in order to break even under average conditions of buildings, equipment, and labor. The same kind of analysis can be applied to the feed cost per pound of butterfat and per 100 pounds of milk produced-- in order to cover all costs, the average producer will need to secure a price which is twice the cost of feed per unit of product produced in order to cover all costs including modest amounts for labor.

CONCLUSION

A summary of earnings, resources available, size of business and other factors is presented in table 12. Small dairy farms had the lowest earnings. Small dairy farms did not have income large enough to pay the operator for his labor and pay for the use of capital. If \$4711 is deducted to pay for labor performed by the operator of the average small dairy farms, nothing remains to pay for the use of capital. Large scale dairy farms, on the other hand, yielded a return large enough to provide \$6000 to pay for labor performed by the operator and yield 10.5 percent return on capital managed.

It is important to bear in mind that the records included in this report are for only one calendar year. Similar data for a different year would show variations in the figures presented. Variations between years, in the main, are caused by differences in climatic conditions and general price levels-- factors which the farmer cannot control. Furthermore, price levels do not rise or fall in unison. Some prices may rise while others are falling, or some may change faster than others. For these reasons, the relative earning

Table 12. Earnings, Resources Utilized, Size of Business, and Expenses, by Type of Farming, 1968

Item	Cash crops	Dairy, under 25 cows	Dairy, 25-34 cows	Dairy, 35 cows & over	Dairy, cash crops
Earnings					
1. Labor earnings	\$ 7282	\$ 3185	\$ 6778	\$ 9895	\$ 7362
2. Net cash income	3715	1912	5674	8054	5902

13. Power, mach., equip., & bldg. expense per WU	\$19.94	\$14.78	\$13.88	\$16.44	\$16.05
14. Tractor & mach. expense per crop acre	7.90	10.43	12.40	13.45	9.51

* \$6000 was deducted as a wage for the operator.

levels of the various types of farms may change from year to year. While large specialized dairy farms reported the highest labor earnings in 1968, the factors mentioned above may elevate cash crop farms to the top earnings position in another year. These data should be studied in the light of current trends, production cycles and similar information.
